1. Grant LT vs. Grant XL?

Newsgroup: rec.radio.cb
Date: 2002-04-01 00:10:23 UTC
From: radiohead11m@aol.com
Message-ID: <20020331191023.02287.00001359@mb-fc.aol.com>
Source record: 119864

It's my turn to tap the knowledge pool of this newsgroup. I'm considering putting my DX-949 out to pasture and am thinking about getting a Grant LT. There are some who consider the LT inferior to the older XL, which has become pretty difficult to procure. Is there any truth to this or are they basically the same "under the hood?" Thanks. Take care and 73.

Mark

P.S. No Dick, I won't be modding the FT-1000D. ;-)

the part where the coax goes is missing or you would see it it is a small
piece that bolts on to the ant close to the boom

I haven't analyzed them exactly, but I think they are the Same thing, but LT has new Dynamic Squelch circuit that automatically sets squelch.
Dave

7. TO the FUSEBOX, Dummies!

Newsgroup: rec.radio.cb
Date: 2002-04-01 01:01:15 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3ca7b519@news.planetc.com>
Source record: 119870

AND WHY is this? I have installed THOUSANDS of CB's through the years, and Most if not ALL of them got wired to the FUSE BOX. That's right--the cold side of the RADIO FUSE. This way when you turn the car off, the CB goes off. Plus IF you run it to the battery, you BETTER have a fuse on the + wire within a foot of the battery, or you're askin' for fires! There is very little or NO advantage to go to the battery. More advantage to go to the switchable fuse box. As usual, the Hambo response for CB is the opposite of the "right" way!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!

I heard on da news today that Walton Mart (Wally's World) passed Exxon in being the #1 fortune 500 company that brought in the most $$$$$. Looks like the communization of Soviet Amerika is continuing. I'm just glad that I delayed this day comming as long as possible, by taking sales away from Wally when I sold Dem CB's just over cost so wally wouldn't git the sale! I heard from a driver just the other day that WALLY put a lot of $$$$ into Bill Clinton's campaign! He said there is a book about the powerful Ark. men; Clinton, Walton, Tyson, and so on. GOOD works, Wally. The problem is that you are NOT good! Jesus said call NO man good. And artificial men (corporations) are even LESS good. Wally: WE hate you! We will do everything in our power to take every every $$$ from getting into your pockets, by supporting the LITTLE MAN that you are trying to destroy! You ARE a TOWN KILLER; an American KILLER; a Slave institution; a maker of BOGUS Commercials!!!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Why is it that Jesus Freaks and Pornographers are, or seem to be, the only ones that use the term "Wicked" any more?

Coincidence?

I think not!

Jeff

Dave, most here don't bash CB. It has a purpose, and does a marginal job at best of serving that purpose. I think what you may be referring to as bashing, is actually a few folks that may disagree with your "theories". It's OK to disagree, and we can agree to disagree, but it's not bashing.

Mark:

For Amateur Radio on 10M, Without a doubt, you're correct, it is, without a doubt, worth the extra money. That little extra bit for CB may or may not provide an advantage on busy "skip" days on CB as well. Up to the operator/purchaser.

Some interesting comments within the thread. I have been looking
into a wireless lan covering some decent distance (over 12 miles).
A friend at work mentioned that some folks like to roam around with
a laptop with a wireless lan and tap into others' lans. Wheeee ...
There are ways around this and I am checking into this (other than
trying to put it up on 24 GHz or higher ....).

I think MURS is available for that service, but not sure about the 12 mile range without an antenna of serious gain.

Source record: 119886

Hello! To get the crystals required to modify for 11 meters go to
www.kenselectronics.com and you can puchase the crystals (four required) for
$8.00 each. Replace the 10 meter crystals for bands 10a, 10b, 10c and 10d
(x09, x10, x11, x12) with the following values from Kens Electronics:
40.4875 (26.000~26.500)
40.9875 (26.500~27.000)
41.4875 (27.000~27.000)
41.9875 (27.500~28.000)

Any alignment is usually not required but could be peaked a little if you
know what you're doing!

Hope it helps!

Enjoy!

Dave

You know how I feel...XL or bust. That's based on personal preference though as they very well may be the same radio inside. I dunno? Uniden makes great stuff though, so I doubt you can go wrong with the LT. Don't forget to add a Channel Guard and SP-1a.

Actually, Dave, both ways are "correct".. It's "correct" as long as the radio gets power... However, if you suffer from a noise problem, straight to the battery is the way to go. The battery acts as a very large filter cap across the alternator which helps to filter noise.

Battery + -> fuse of the appropriate amperage -> power line -> rig and a ground wire as short as possible to the frame works just as well (if not better for noise suppression) as going to the fuse box.

If you still have spark noise/alternator whine/fuel pump noise coming in over the power lines, then just run the positive lead as many times as possible through a ferrite torroid or two. One as close to the radio as possible, and one as close to the battery (after the fuse) as possible.

Going direct to the fusebox can help to introduce noise into the radio from things such as the headlights (yeah, sounds silly, but it's true), wiper motor, fan blower motor, etc, etc, etc.. then you get to play hell tracking it down.

Works for me, anyway, and I've never had a vehicle fire because of it.

Gee wiz Dave!!!!!, just because you've been doing something one way for a long time and it seems to work for you, does it preclude another method from working better? As always, there are advantages and disadvantages to any installation method, so let's review. The advantage to wiring it to the fuse box is that when you turn the key off, if you wired it via the ignition, then the radio will also turn off. Cool. The disadvantage to this is that if there is any electrical noise generated by the car, such as fan motors, switches, and the like, then you have a better than average chance of hearing them on the radio. Second, you might want to use the radio with the motor off and even have the key out at the time. Every radio is a little difference in it's amperage draw, but just sitting and idling in 'on', it's hard to imagine that the radio would pull so much current that it would drain the battery in any short period. It might not take much more than most dashboard clocks. Besides, if you forget to turn it off and then let the car sit for 3 weeks without driving it, you probably deserve the dead battery. Thirdly, if voltage to the radio is of any concern, then wiring directly to the battery will assure the most consistent and highest available voltage. Voltages drop as the amperage draw increases on small wiring, so while the voltage at the battery might be, say, 14.1 volts, the voltage at the fuse block downstream from some of the accessories might be, say, 12.8 volts. For most people it wouldn't be noticed, but a volt is a volt in radio.

Personally Dave!!!!!, I have always connected radios directly to the battery and have normally performed overkill by fusing both positive and negative wires at the battery. In an accident, you never know what might happen, and the negative lead to the radio could suddenly become a positive and need that fuse, so in my installations, it gets a fuse. When you spend hundreds for a good system, what's a buck forty-nine?

I sure wouldn't want to tell you how to do business Dave!!!!!, and because of that, I didn't tell you how to do anything. Another guy asked and I offered him the information. Essentially Dave!!!!!, you should have butted out, since you weren't a part of the discussion, but it's Sunday, you are probably drunk, and certainly bored, so you just had to get your two cents in. Keep up the good work and keep cutting corners by installing those radios to the fuse block. It insures a return customer who will complain about electrical noise, and it gives you an opportunity to bill your customer another hour for the labor it takes to 'fix' it.

Have a nice evening.

If you saw my post, I said run it to the battery, and also said to
fuse it at the battery, as well as fuse it again at the radio. I also
suggested fusing the negative side, as well as an inline noise filter.
There is a reason for that. The newer cars with the POS computer
controlled stuff, the fuse systems are more touchy. You'll get better
draw straight from the battery. I have been installing radios for
years myself Dave and have always done this, it has nothing to do with
my having a ham ticket either. Not trying to argue, but it's the way I
do it, as do many shops up this way.

Astarte was the principle goddess of the Tyre and Sidon people. That
was Phoenicia.

Dave is right in one respect. Easter is an ancient pagan holiday that
was adopted by Christianity - including much of the symbology, such as
eggs for fertility.

They are pretty much the same thing. Not much difference between the two at all. The LT is pretty cool with the lights around all the knobs and switches. They modify exactly the same if that's what you are wondering. The LT still has that great receive that the XL did. All i did to my LT is the extra channel mod and opened up the audio a little bit. They don't need much. Hope that helps you.

To: chuck K8CPA <k8cpa@arrl.net>
X-Mailer: QUALCOMM Windows Eudora Light Version 3.0.6 (32)

1: I re-read your note. What rec.radio.cb? ARNewsline is only posted
on
the Internet to http://www.arnewsline.org. (We do not involve
ourselves
with these useless internet discussions because they are based on
nothing
more than inuendo, lies and personal assaults. I don't think they
serve any
real purpose other than permitting people to vent hatred and there is
just
far to much of it in the world. Read the front page of your local
newspaper if you do not believe me.)

2: S1nce we never asked you to post a "rebuttal" and we have no
reason to
ask you to retract it. As long as you did not change the content of
our
material and did not slander either myself or ARNewsline Inc., you are
free
to make any comment you like. (If its on one of thise newsgroups you
reffered to -- well -- have fun.)

3: We will be happy to share with you material -- but only as time
permits.
Besides, every bit of it -- and I do mean e-v-e-r-y bit of it is and
long
has been in the public domain. Our sources go back to the late 1950's
and
through the 1960's, 1970's and 1980's. Which leads to:

4: In reality, it is nothing that has not been published and
republished in

such venerable vehicles as the old Westlink Report, CQ Magazine, 73
Magazine (neither of which were/are anti CB) and a great, great deal
in CB
Radio News (1957 - 1979)and CB Magazine. The latter two had nothing at
all
to do with Amateur Radio and were very, very viruently anti-ham radio.
Probably the reason that neither is being published any longer. Do
you
remember either of these two -- or Wayne Green at 73 taking on the
Communications Attorney Service Inc. and its 300,000 subscribers who
each
paid $50 a piece to a con artist? Or CB Radio Times taking on the CB
Leagal Service which boasted 50,000 subscribers in 1976? Probably
not.

Last comment. Maybe you should not bother listening into Part 2 next
week
and Part 3 the following week.

de
Bill P.

rec.radio.cb is a internet usenet newsgroup. for someone who CLAIMS to
be
quite aquainted with the internet, you sure are in the dark alot. and
another thing, where'd you learn how to type?

As you see, Bill, I just insulted you twice in the last sentance, this
is

what this article was to most CB'ers, an insult, You're basically
slapping
all CB'ers in the face and saying the Amateur Radio Service is better
than
CB Radio. and futher more, you're trying to whitewash the service and
make
like the Amateur service is better. Which it isn't, The Amateur Radio
Service has it's problems too, K1MAN for instance, 14.313, 75 meters,
14.275, the list goes on and on.....

>2: S1nce we never asked you to post a "rebuttal" and we have no reason to
>ask you to retract it. As long as you did not change the content of our
>material and did not slander either myself or ARNewsline Inc., you are free

>

Your right, you didn't ask me for anything, I personally took ISSUE
with
YOUR SLANDERIOUS COMMENTS towards a radio service that I use on
occasion, I
took issue with YOU slapping the faces of every CB'er in the world, by
indirectly calling them Law-Breakers, Stupid, and basically trying to
run
the CB Radio Service into th ground, to make the Amateur Radio Service
look
good. Which is in face a LIE. the Amateur Radio Service has it's self,
in
face does have problems.

>3: We will be happy to share with you material -- but only as time permits.
> Besides, every bit of it -- and I do mean e-v-e-r-y bit of it is and long
>has been in the public domain. Our sources go back to the late 1950's and
>through the 1960's, 1970's and 1980's. Which leads to:
>

So in other words, We'll get it too you, when WE feel like WE have the
time, sounds to me like I'll never see anything from you. I think your
trying to weasel out of providing me SOLID facts as to your story.

>4: In reality, it is nothing that has not been published and republished in
>such venerable vehicles as the old Westlink Report, CQ Magazine, 73
>Magazine (neither of which were/are anti CB) and a great, great deal in CB
>Radio News (1957 - 1979)and CB Magazine. The latter two had nothing at all
>to do with Amateur Radio and were very, very viruently anti-ham radio.
>Probably the reason that neither is being published any longer. Do you
>remember either of these two -- or Wayne Green at 73 taking on the
>Communications Attorney Service Inc. and its 300,000 subscribers who each
>paid $50 a piece to a con artist? Or CB Radio Times taking on the CB
>Leagal Service which boasted 50,000 subscribers in 1976? Probably not.
>

And I answer that with.... You ever read the announcements in QTH
Classifieds??? You ever hear of the scams pulled on E-Bay? BY HAMS TO
Other
HAMS??? My point???? Amateur Radio operators ARE NOT these perfect
little
people, who never do ANYTHING wrong... and yes, I remember all that
stuff,
my father was a active CB'er in the 1970's, I have copies of the CB
magazine and CB Radio News.

>Last comment. Maybe you should not bother listening into Part 2 next week
>and Part 3 the following week.
>

Oh! Not only am I going to listen to it... But I will comment on it,
and
If I hear anything that I do not like, I will be posting a rebuttal
to it
on my website and in the newsgroups as I see fit.

Sparky, I'd like to remind you that if a radio is severely overmodulated
or an amp is running class C or something of the like, it is POSSIBLE
that the SWR could increase under modulation. If there is a lot of
garbage being generated far from the 'sweet spot' of the antenna, that
extra rf just might be reflected back down to the transmitter. A
properly modulated, properly operated transmitter will not exhibit such
characteristics of course, but ....

just my two pennies' worth

Dave, here in Rochester, NY, we have basically two competing supermarkets - Tops and Wegmans. 10 years ago, Tops was definately cheaper with their meats. About 6 years ago, Wegmans lowered their prices - and then Tops did. The prices got fairly decent. Then, 5 years ago, Wegmans raised their prices through the roof. Tops started raising their prices and THEN NY state found out they were conspiring to stop all couponing in the area! Well, both stores had to print out coupons in the newspapers for a couple of dollars so consumers could get back maybe one cent on the dollar they were overcharged! So, I started shopping at Sam's club. Meats are probably only 60% of the price that Wegman's or Tops charges. Low and behold, Wally's world opened a supercenter here! Guess what? Bread dropped from $3.00 a loaf (are you ready for that?) to $2.29 (the 'good' store brand). Milk dropped from $2.99 a gallon to $1.99 a gallon. Eggs dropped from $1.49 to $0.79 a dozen. This is for openers. You think Wally's world is crooked? I've got news for you! Oh yes, single use cameras dropped from $12.00 to $4.99 to $7.99. Do you think just perhaps we've been being gouged here in Rochester? BTW, I've long since stopped shopping at Wegman's and Tops. I deal with Sam's club and a friend of mine has a corporate account at a fish market so I can get shrimp at less than HALF what Wegman's charges. Wally's world? Thank heaven's they've arrived! If nothing else, it keeps the other places honest.

In front of me is a copy of the conversion details to put an FT102 on 11 Metres. Details are there for 26.5 to 28 MHz.
Nicely printed, with diagrams of the circuits, board layout, and cabinet opening diagram. Looks like a proper Yaesu document to me.
As it was faxed, each page has the details of where it came from... "YAESU UK LTD". The front page is a Yaesu UK fax page, naming the service department as sending it.
So Yaesu cannot consider it "butchery" to mod a Ham radio for 11 Metres.

Problem is that Ham radios were not designed for 10KHz spacing. To be honest, the chap would probably be better off with a CB (or Lincoln type "Amateur" radio) for CB frequencies.
Quite a few have been converted over here... the receiver bandwidth is too wide and the deviation has to be reduced to fit within the 10KHz spacing. If you cure these, then you make it poor as an Amateur radio.

Brainbuster.

An employee of USAir with the last name of Gay boarded a USAir flight with a free travel voucher.

Soon after he sat down, someone else came and claimed he had the same seat assignment, so Mr. Gay moved down do an empty seat. Soon after that the airplane began to fill up.

The rule with the USAir employee vouchers is that if a paying customer needs your seat, you have to surrender it. So when the flight became completely full and still more needed to get on, a flight attendant went to the original seat of Mr. Gay and said the the man now sitting there, "Excuse me, are you Gay?"

The man, somewhat stunned, said, "Well, yes, as a matter of fact I am!"

The flight attendent said, "I'm sorry, but you'll have to get off the plane."

At this point Mr. Gay, who had been watching all of this, jumped up and said, "Excuse me, you've made a mistake - I'm Gay!"

Finally, another man jumped up and said, "Well, hell, I'm gay too!
They can't throw us all off!"

You really sure you want to do this? The problem with fusing the ground lead is that a lot of alternative grounds exist, not the least of which is your antenna. So you can blow the neutral fuse and the rig would still work. More or less, the coax shield makes a really noisy ground.

There are any number of situations where blowing the neutral fuse makes a bad situation worse which is why fused and switched neutrals are verboten in the electrician biz. There are degrees of this: a lot of microwaves switch neutral in the doors in US models where the Canadian rules simply do not allow switched neutrals under any conditions. It is kinda picking the fly specks out of the pepper but the Canadians are right.

IT's not illegal for a HAM to modify his/her radio... It's just illegal to
transmit out of band except in an emergency.

Get your story straight.

Bad advice ,spark! Don't worry about your SWR when you talk. SWR only
matters with a dead key. It will go up when you talk, because it does
another watt or so when you talk, so the SWR reading is higher; BUT you
have your SWR meter set for a dead key, NOT your talking into it.
-
Dave you moron, SWR is a ratio that changes only when there is a change
in the match, not the power.

-Yea, jump right with the name calling why doncha?

    Also DON'T
un-tune your CB--leave it tuned up. There are some Hambos out here
giving real BAD advice to CB people that are NOT CB shops and don't have
much experience with CB's @ all!
-
First, and I have said this countless times, I'm not a ham (yet). I am a
professional

-Professional WHAT?

  with several years of higher education

-Oh brother! And this obviously somehow makes you feel superior or you
wouldn't have mentioned it, let alone compare it to being a ham. Makes
me think of a saying I once heard from a lost, crazy old blind
fisherman....:"Winners compare their achievements with their goals,
while losers compare their achievements with those of other people."

and several more years of practical experience.
-Doesn't everyone?

Regardless,

-If it was regardless, you wouldn't have felt the need to regurgitate
all the unrelated bullshit.

most hams have a better knowledge of radio than most CBers because it's
required, which is probably why so many can't pass the simple test to
get their license

-Who said so many can't pass? You did.
  and subsequently resort to illegal operation.

-Just like the rest of what you put forward.....wrong.

And considering that CB is just one step above the walkie-talkies in the toy department, a CB tech certainly doesn't need to have any intensive technical training or experience.

-But lo and behold, pray tell where we were fortunate enough to have been graced with your smiling, refreshing, pleasant demeanor each day? Why, in rec.radio.CB, of course. And here you sit, pathetically comparing your achievments to that of another, in this case, a cb tech and licensed ham, in hopes someone gullible enough will believe your boasts actually mean something. With all that education you claim to possess, you simply show the world you have plenty to learn.

Now I know that the simple concepts of forward and reflected power and their RATIO are not very complicated, but maybe it's better you leave the technical advice to us 6th plank commies that have studied all those books you burned and know what we are talking about.

-Your use of the word "we" gives the intentional illusion another supports your insultive demeanor...I have news for you, they don't. After all, no one else is humping Dave's leg besides the usual attitude carriers. Ahhh, the power of Dave! He's happy, you're not! Got God?

NUTS!!!!!!!!
.
"a CB
tech certainly doesn't need to have any intensive technical training or
experience".

#2 you are full of bull shit!!!!!!!

i have been servicing cb for over 42 years and you don't have even a
tiny grip on it......

yes i am a ham also, and at times i am ashamed of some of them.. got my
1St class phone and radar endorsement licence in 1954,
  so when you know nothing it is best to shut your eating hole and
LISTEN for a while....
carl, alabama
****
Damn dude...you make me ashamed to admit I'm from the south.
-
You shamed yourself long before Alabama entered the picture. As if that
isn't enough, if you would concern yourself less with other's business,
as has been previously suggested, you wouldn't have such problems, such
as an ego that fractures so easily or allowing another to dictate your
emotional responses.
    Anyone that would allow another to "shame" them doesn't have
much self-confidence to begin with.
  Here is a cb tech and licensed amateur dispelling some of the
bullshit set forth by your type of undesirables. Losers such as yourself
see this as a threat, so you, as do all kennel dwellers, make it
personal, off-topic, and insultive. Just another blight to radio.

From: joxendi@bellsouth.net (Jerry Oxendine)
Keith,
If ya does the crime, then ya has to pay the piper. I wouldn't be
surprised to see more of these come along as time goes by. I kept
posting that this sort of thing was going on, but some fellas just
laughed and said such things as "FCC has better things to do than hassle
a
poor CBer for freebanding". But that is part of the trouble. The
offenders
just cannot see,
nor do they comprehend, that OTHERS have use/need of the spectrum as
well, so they can't understand why they get nailed when they interfere
with others because they only see
their own side of the argument.
Jerry
-
  Jerry, please identify the scoundrel(s) that laughed at you.
So much disinformation (and energy, not to mention time being devoted)
is being put forth that we ought to clarify the radio related truths
from the fallacies, no?
I also believe the feds haven't "hassled" any cbers un-necessarily..they
always give a warning, as they did to this birdbrain that decided to
ignore it.
And what incident or information did you base your claim that "they
can't understand when they get nailed" on? He was warned once and made
aware of the problem. What's to understand?
Which FCC report contained the statements of the cber that was busted
(you know, out of the half dozen that have been popped in the last
several years) where it claimed he couldn't understand?
  To set the record straight, I have seen no one disagree with the
notion that the feds will bust your ass if you are creating a problem.
It is those with another agenda that attribute this bullshit to the
cbers here.

which YOU brought to the group. You went looking and so you found..sow
and so shall ye reap, what is it now, 3 lost ISP's? Looks like this
magic effect I have that makes you say silly things is confined to my
kennel club <g>!

I would really hate if somebody decent got shot when they could have
done you instead.

-But of course! You have shared time and time again your lack of control
when it comes to me.
You can opt to say I have that effect on people, but it is only you I
elicit such strong responses concerning violence from. Your drunken
thoughts show you near the bottom of the ladder of evolution. What power
you attribute to me, Lelnad. Even if I always did possess the faculties
to illustrate your proneness to violence with mere words, you never
should admit such things publicly, but then again, that is what
entertains me the most whenever I decide to have you as a concern.

The REAL problem, and one that the FCC is well aware of, is that most people have cheap electronic junk (telephones, radios, TVs, etc) that do not have adequate RFI filtering built-in. Thus, if his neighbors mentioned it to him, his correct response should have been, "Buy decent equipment."

Try calling the FCC's own complaint line and see what message you get. Then try to equate it to this (or any other) action. Good luck!

I agree, however; after a visit and a warning he should have paid some attention.

Source record: 119939

It does no good to argue with Dave/Debby. I believe myself to be quite literal in Biblical in-
pretation, but I cringe at the people who profess to "know" every word of the Bible while,
at the same time, showing just how much they DON'T know. The KJV is no more than a
translation and should carry no more authority than RSV and other versions.
Yes, I happen to like reading KJV and have no difficulty with the text. But I've heard so many uneducated
backwoods preachers, usually of the pentecostal persuasion, screaming at the top of their lungs, "And-AAH, th' Lord said-AAH, any jezebel that-AAH uh-reads any other-AAH
version of the scriptures besides-AAH that 'ere King James Version will-AAH burn in hell-
AAH, fer that 'ere Gospel is ONLY-AAH contained in that book-AAH!"

You know, we all wonder at the restrictive lives people, especially women, live under the Muslim religion. While I would love to see less of the blatantly sexual influence on our daily
lives in the US, I shudder to think what kind of life we would have if certain Fundamentalist
sects were to exert influence or to be endorsed by government. Would it be much better than the lives led under the Taliban? Would women be forced to wear ankle length dresses,
wear their hair in a pile on their heads (like they'd been sitting under the wrong end of a cow), be unable to use cosmetics, denied the ability to work? Would they dictate what you
watch on TV, force schools to have devotionals every week following a certain religious practice? How about banning divorce, so that a spouse would have to endure abuse regardless of how bad? Would they force all businesses to close on Sunday, and demand that everybody attend their kind of church; i.e., listen to one of those ignorant preachers
yell AAAH! after every couple words. Oh, how about banning any kind of Bible but KJV?
As bad as it is, I would hate to see it go the other extreme.

Dave, you keep hammering at Catholics. No, I am not Catholic, but I must say that one of
the characterics of some of the "fundamentalist" denominations is bashing Catholics. There
is a guy in a town near here that runs a used car lot. He has bulletin boards up all around town that call himself, "Your Believer, Christian, and Saint". Then he signs his name and
car lot name. Usually there is a scripture verse and something bashing anyone of other than

his fundamentalist, pentecostal denomination. He knocks Catholics,
Methodists, Baptists,
Wesleyans--anybody other than his denomination. He believes that one can
be, for example, lost and saved, saved and lost, saved one day, lost the
next. He quotes scriptures out of context to make it seem that HE is
completely without sin, thus the "Saint" moniker,
and that he can live every day without any sin at all. BULL! He is as
wrong as he can be!
BTW, I bet his pastor screams every Sunday, "And th' Lord said-AAAH, yore
a-goin' tuh
hell-AAAH if you ain't uh-saved and uh-comin' hyar to this hyar church-AAH,
and under
the sound of mah voice-AAAH!!"

Jerry

75. Re: Rileys Hammer freebander gets busted

Newsgroup: rec.radio.cb
Date: 2002-04-01 20:48:43 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <kK3q8.3583$0T6.86932@e3500-atl1.usenetserver.com>
Source record: 119940

I've been told many times by various people, and/or read, that FCC didn't have time to fool
with CBers because they have "bigger fish to fry" with commercial interests. And that goes back a couple years at least. I once posted the results of Riley Hollingsworth's forum at
Shelby, NC on a BBS where he stated that it was his intention to go after lawbreakers in
increasing frequency (pardon, no pun intended) starting with the renegade hams, and then
going after 10 meter intruders, interferers, and the suppliers of illegal equipment. I mean, I
am acquainted with Riley, and have known of him prior to his appointment. Oh boy, I should've never mentioned that! I got called everything from liar to--whatever you want to
imagine. Not all on this newsgroup, either.

My position is simply that, if you stay within the 40 channels, you might get away with running a couple hundred watts, shooting some DX, and having fun. Likely, you wouldn't
get noticed. If you are illegal and you know it, a neighbor complains, then work with the
neighbor to alleviate the interference. Don't just tell him to **** himself. When you run
super amounts of power (which is really not necessary IF everybody would play by the same rules), operate on somebody else's frequencies, you're gonna get noticed. That is what has been happening, and the busts "seem" to be getting more frequent. And it seems consistent with what I heard RH say personally. It takes a sleeping giant awhile to get up
and get going, but it IS stirring more and more.

No, I am not going to name names and accuse people of saying things that were said in the past. It really isn't that important. I just tried to warn people that these events would take place. I got flamed for it---as if I care. The busts won't be against me--I stay within the rules that govern my operation. Don't be surprised if the FCC actions continue to increase: complaints are coming in from all over, and not just within the US. And for those who want
to flame me, that's OK. I'm not here to argue; got better things to do.

Keith,

If ya does the crime, then ya has to pay the piper. I wouldn't be
surprised to see more of these come along as time goes by. I kept
posting that this sort of thing was going on, but some fellas just
laughed and said such things as "FCC has better things to do than hassle
a
poor CBer for freebanding". But that is part of the trouble. The
offenders
just cannot see,
nor do they comprehend, that OTHERS have use/need of the spectrum as
well, so they can't understand why they get nailed when they interfere
with others because they only see
their own side of the argument.
Jerry
-
Jerry, please identify the scoundrel(s) that laughed at you.
So much disinformation (and energy, not to mention time being devoted)
is being put forth that we ought to clarify the radio related truths
from the fallacies, no?
I also believe the feds haven't "hassled" any cbers un-necessarily..they
always give a warning, as they did to this birdbrain that decided to
ignore it.
And what incident or information did you base your claim that "they
can't understand when they get nailed" on? He was warned once and made
aware of the problem. What's to understand?
Which FCC report contained the statements of the cber that was busted
(you know, out of the half dozen that have been popped in the last
several years) where it claimed he couldn't understand?
To set the record straight, I have seen no one disagree with the
notion that the feds will bust your ass if you are creating a problem.
It is those with another agenda that attribute this bullshit to the
cbers here.

I have a President George thats a 9 - 9.5 on cosmetics, works 100% perfectly and does 50w pep on SSB, roughly 40 - 45 on AM. I purchased it from my neighbor before he moved for $350, im only the second owner and he only had it for 4 months. Best RX and TX i've ever seen in a radio in this price range. Asking $325 or best offer, conact via email for more information etc. Easy to operate, everything included, Box, stock mic, mounting bracket. Didnt include an owners manual when i purchased it but its a very easy radio to learn how to use and there are some manuals you can find on the net, i may be able to get a copy of one if you reall wish to have it.

I've been told many times by various people, and/or read, that FCC
didn't have time to fool
with CBers because they have "bigger fish to fry" with commercial
interests.

-Which is the truth with the exceptions of problem operators.

And that goes back a couple years at least. I once posted the results
of Riley Hollingsworth's forum at
Shelby, NC on a BBS where he stated that it was his intention to go
after lawbreakers in
increasing frequency (pardon, no pun intended) starting with the
renegade hams, and then
going after 10 meter intruders, interferers, and the suppliers of
illegal equipment. I mean, I
am acquainted with Riley, and have known of him prior to his
appointment. Oh boy, I should've never mentioned that!

-Why not? If anything, it lends credibility to your
knowledge concerning current happenings. What he tells you and what you
relate to others
is probably a good thing, if you are reading him correctly. Riley
doesn't have carte blanche and that is almost what is needed in a
position such as his.

I got called everything from liar to--whatever you want to
imagine.
Not all on this newsgroup, either.

-Name calling on this ng? Of course I believe you.

My position is simply that, if you stay within the 40 channels, you
might get away with running a couple hundred watts, shooting some DX,
and having fun. Likely, you wouldn't
get noticed. If you are illegal and you know it, a neighbor complains,
then work with the
neighbor to alleviate the interference. Don't just tell him to ****
himself. When you run
super amounts of power (which is really not necessary IF everybody would
play by the same rules), operate on somebody else's frequencies, you're
gonna get noticed. That is what has been happening, and the busts "seem"
to be getting more frequent. And it seems consistent with what I heard
RH say personally. It takes a sleeping giant awhile to get up and get
going, but it IS stirring more and more.

-Pretty much agree with everything you said. Concerning another's freq., you are also correct that talking on someone elses assigned freq will get you noticed..which is why it;s imperative to know exactly where you are transmitting at all times...for example: 555 has tuned into a free for all......nobody cares, UNLESS, as you stated, a problem is being caused.

No, I am not going to name names and accuse people of saying things that were said in the past. It really isn't that important.

-Yea, you're right, why dig up old dirt?
The troublemakers all got theirs and will continue to enjoy the bitter fruits of their malice and misguided efforts for some time to come.

I just tried to warn people that these events would take place. I got flamed for it---as if I care. The busts won't be against me--I stay within the rules that govern my operation. Don't be surprised if the FCC actions continue to increase: complaints are coming in from all over, and not just within the US. And for those who want
to flame me, that's OK. I'm not here to argue; got better things to do.
73
Jerry

-I don't think anyone would flame you for posting your opinion, that's reserved for us who talk about the freeband, linear, or mod, although, it certainly has become much quieter lately.

Yes..I have heard proposes to eliminate 11 meters for the "Citizen Band" returning it to the ham spectrum where it originated.. With FRS type radios, "Citizen Band" would be what it was intended. Short distance..low power. There were a couple of articles on it, one on QRZ.

I think that you are both wrong about CB.

Back when the CB boom of the '70s was on, the CB radio manufacturers did a pretty good job of representing the service (they were representing themselves, really). They even lobbied for an expansion from 23 channels to 40 channels, and got their way. There were movies being made about CB, there were tv programs being made about it, and the whole area was booming. The CB manufacturers were even attempting to take over portions of the VHF ham bands, and it looked as though they just might succeed.

But the boom was a fad.

Then the bottom dropped out of the CB radio market. Whole warehouses of radios went unsold, and manufacturers were going belly up in droves. It was very much like the dot com implosion of the past 18 months, and CB passed out of the public mind as the fad ended.

Once the thought that big profits could be made selling CB equipment faded, the strong representation by equipment manufacturers faded too, and the band languished.

All that were left were dyed-in-the-wool hobbyists, and the band grew no more. The hobbyists, unfortunately, think that any laws governing the band are a joke and behave accordingly. I think that in the not too distant future the band will be eliminated. It is irrelevant now that other services (cell phones, FRS, etc.) are available to the public, and only inertia keeps the FCC from dropping the 11 meter band entirely.

Dave you are supposed to be a CB shop or something and this is what your customers get from you.

The problem with the cheap swr meter/radio swr meters is most people usually don't recalibrate the meter when they talk into it as compared to when you check with the deadkey, when you key up you have to adjust the meter with swr cal knob to get the needle to the correct spot but, how many re-adjust the swr cal at the same time they are talking when they try to check swr under modulation. If you had a bird type watt meter this would not matter since it reads forward power as well as reflected power then a ratio is calculated.

All newer HF Radios (Kenwood, Icom, Yaesu) that are made have continous coverage recievers 0-30 mhz +/- , So 11 meters is included by default, now of course the radio can be modified which will enable TX over that same 0-30mhz range. Cbers generally modifiy these radios illegally and use them on CB freqs. A licensed Ham can modifiy the radio which is legal as long as he doesnt transmit on 11 meters, or out of his other allocated bands. The rule with emergencys is very sticky I have heard people getting in trouble for this and there is no written rule or law that says it is Ok or allowed otherwise that I know of, so I think SSB needs to check his info on that tidbit.

Damn dude...you make me ashamed to admit I'm from the south.
-
You shamed yourself long before Alabama entered the picture. As if that isn't enough, if you would concern yourself less with other's business, as has been previously suggested, you wouldn't have such problems, such as an ego that fractures so easily or allowing another to dictate your emotional responses.
Anyone that would allow another to "shame" them doesn't have much self-confidence to begin with.
Here is a cb tech and licensed amateur dispelling some of the bullshit set forth by your type of undesirables. Losers such as yourself see this as a threat, so you, as do all kennel dwellers, make it personal, off-topic, and insultive. Just another blight to radio.

Hey Twitsy, Look at your post to Randy, you are the biggest hypocrite out here besides Landshark, you call this man names you wer personal with him, your post is certainly off topic, and very insultive why don't you practice what you preach you goat smelling guy. I swear to god some people just don't get it they tell you to do something and they are sitting there doing the exact same thing or worse Go mind your own friggin business.Just another blight to society.

Twitsy think about it how many people actually like you on this NG? Everyone argues with you and you think you are loved no one likes you your posts are un-intelligable and if moparholic had a hair on his ass he would telll you your NG repklying style is severly lacking./ I know you really don't care what anyone thinks and I can certainly understand that because you need to have 1/2 a brain to understand that concept. We know you don't fit the bill in either case, go buy a real computer with all the money you collect from the guys up North who come to visit Hell I even bet Best Buys or Wal-Mart in your area would sell you an Emachine real cheap. Or better yet get a Dell and get of the 27" TV

Sorry to be a history nut but the Amateur Service was only the last holder of a set of garbage frequencies (26.96-27.23, channels 1-22 and the RCs) that in fact we didn't want. Eliminating 27MHz CB and 'returning' it to the Amateur Service are two entirely different actions. As one of the very few Amateurs who ever ran on 11 meters when it was legal -- and that only because it was the only band where fax/SSTV was legal -- I vas dere Sharlie and even in the great 1958 spot cycle it was a wasteland primarily because Europe and Africa never had it as an amateur assignment.

Long and short, don't blame us for whatever happens: we did not want it then, we do not want it now.

Damn! Twisty really let me have it, didn't he? ROFL! If Jester hadn't replied to him, I'd have never seen it...I've got the OE version of Bozo Flush filtering Twisty out of what I receive.

What to do, what to do...guess I'll get the broom out and sweep up my fractured ego before Twisty grinds it to dust in his literary grist mill.

Now then, guess I'll call WebTv and see if can get one of those real-big-screen computers so that I can make heads or tails of the ones and zeros that I keep seeing here. In the meantime, I'm gonna call Roadrunner and see if I can get a really cool banner placed at the bottom of all my messages. Whaddaya think Twist? Sound like a plan? Oh never mind, I wont see your reply unless someone quotes it.

BTW, how's the CB working?

Brainbuster.

Yes NoBrains busted just like I don't have to do anything to get a mention from noballsbusted, just like your butt pumping buddy who you always stick up for mentions me with each and every post he makes is this ok with you? You feel rules don't apply to you? just to others

An occasional mention of his name by me let me get you a hankie is much the same as you mentioning me when we are not even engaged in any conversation why is this ok for you and Landwhale? but not for me? Do I ever mention you ? Jealous that I dont? Yourself thats what you should be concerned with at least any straight (non fag) guys I know wouldnt stick up for another man quite the way you do ...ohhh Illl bet you guys have a lot in common. yes indeed. And it is not CB radio...Talk to the hand!

being involved with CB radio since 1969 and currently operate DX on 11 meter band with more than 3000 QSL cards from just about every division in the world .I would like to speak on behalf of a few of us who operate in a professional manner.My station runs clean with no amplifier or power mike and a PDL2 beam.I operate in the 11 meter band and do not interfere with anyone around me.I have a close friend who is a FCC coordinator and the problem is not with the freebanders but the overpowered mobiles and base staions who use excessive power to talk local and interfere with everything in their neighborhood.You can talk about frequency allocations all you want but legitimate freebanders stay away from ham frequencies and any other freqs that they may interfere with.If you claim that they dont belong where they are at then you tell me in thirty years of being on them how come I dont hear them in use.(Official qoute from a federal source" They have been obsolete for years"}

Dave, he probably didn't post the whole thing here since someone would complain and the post would be removed. The URL, however, is a simple method that doesn't take up a lot of space in the newgroup. Face it, there are idiots in both services; most of the gangs are pretty good folk. A few, however, are bent upon spreading hate and discontent. Sign ..

Agreed that there is a problem
with cheap electronics, but that doesn't
preclude the fact that he was trashing them.
Do you think he would've effected them if
he wasn't running an amp? I'll bet if he had
worked with his neighbors instead of ignoring
them, he wouldn't have been caught.

Well here is my problem. Part 95 specifically states:

"95.413 (CB Rule 13) What communications are prohibited?
...
(9) To communicate with, or attempt
to communicate with, any CB station
more than 250 kilometers (155.3 miles)
away;"

It seems to me that your 3,000 QSL cards exhibit an ongoing and wanton disregard for the law, and are symptomatic of the CB service itself.

It is difficult for those of us who are amateur radio operators and who DO follow FCC regulations (in this case, part 97) to have respect for those who routinely engage in lawlessness. We fight very hard to keep lawlessness out of our own service (and it does exist), because it ruins the hobby for everyone.

When 11 meter CB gear can no longer be sold in the U.S., it will be "professional" operators like yourself who caused it to happen.

Congratulations, and I mean that.

1) For surviving four spot cycles more or less intact.
2) For a fine choice of antenna.
3) For pretty well representing a sub-group in the CB maelstrom who really
have not been much of a problem to anyone for many years.
4) For showing that a clean, relatively lo-power station is really the way
to go as opposed to the 'how many pills' school of operation.

I am going to assume that you are SSB and not totally 'stock' and that's
OK. One reason you might not hear them is that they are FM and too wide
for the passband filters on your receiver; the allocations are for some
pretty wide FM if, as you say, they are used at all. The availability of
repeaters has made the VHF/UHF spectrum certainly the frequencies of
choice as I am sure your frequency-coordinator buddy will confirm although
he does not handle government freqs. You are undoubtedly aware that parts
of the so-called freeband are marine assignments in some countries and we
do not assign there; 27.67-28.0 for example in Australia and are more than
likely FM as well on 20 kHz splits and again would exceed the SSB filter
width. See http://www.vkham.com for specific channels. Just how much

activity is there rather than the more usual 156.8 vicinity your guess is probably better than mine. And as you must admit, freebanders have caused some abandonment by simply blasting the occasional users off the map; not everyone can run reggae continuously to protect their freq.

As outlaws go, you have indeed been solid citizens and not a big pain but the angel suit does need to be sent to the dry cleaners.

Dick N&#65533;BK

Source record: 119967

I can't recall it now, but a few years ago I read an FCC study about which devices generated the most calls with repect to interenece with Part 15 devices. The bottom line was that the vast majority of all citizen complaints to the FCC were related to CB radios bothering the Part 15's. Upon further investigation, the vast majority of the CB radios were transmitting within legal limits, but the problem was more likely to be caused by mismatched coax, poor grounding, or poorly placed antennas. Anyway, the FCCdumped it back on the the owners of the Part 15's because in these cases, the CB was operating as designed and the other stuff wasn't.

my 2 cents worth

hams have always blasted cb radio operators some deserving some not .. to me its all a big power trip and comon misconseption .. as far as rf interferance most cb hobbiest as well as HAM OPERATORS do not care if there ripping through there neighbors stereos,phones ect. as long as there the king of the hill on the radio ..NEWS FLASH who cares if you are the king of the hill if your ripping into your neighbors house electronics .. if everyone put forth the same effort as being the king of the hill as checking and reparing your station for rfi. it dosent cost much money for a feield strength meter ground rods wire and band pass filters ect .. trust me it is nowhere as close as much as that linear under your desk trust me i have been in the hobbie for most of my adult life ..

for any one who cares this my 2 cents .. and that is where all the problems start from catch you all lator matt

Yep, dey is! Met a Christian guy from Indonesia at the Chinese restaurant tonight. He said that 10-15 years ago when he was there, they use CB to talk to the next island, or SKIP when it was in to talk to other Indonesia islands 1000 miles away, or Austrailia, or other countries in the region. He said a lot of young people was on CB then; it was FUN ! He had a Cobra, and mentioned a Navaho I think. Soiunds like he had a 5/8 groundplane too. Linears, yes too! Looks like other peoples don't pay attention to the 6th plank, Worldwide! Ain't NO doubt! I is clear! 4-10!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Typical criminal mentality, Ill bet you If OJ didn't drop the glove he
wouldnt have been caught. Or Ill bet if you didn't have any finger prints
you would never get nabbed for burglary?

Yep, but WHO will make Wally Honest? They tried to pass a law in TN to make them not sell gas below cost. It failed--wally now sells it the same cost as others. IF wally puts the other places out, you is in trouble. Then again, IN the "Land of Hillary" (Ha Ha), NY has the highest property tax in da nation. Maybe da socialism & commyism is forcing up food prices. I heard of a similar price fix thing that happened in Ohio years ago. Too bad the GAS Stations don't get busted for doing it, because THEY DO ! I would suggest you GET OUT of NY, but stay a while so you can vote Hillary OUT ! Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Why do you insist on using the term "freebanders?" The correct term is
"criminals."

> but the overpowered mobiles and base
> staions who use excessive power to talk local and interfere with
everything
> in their neighborhood.You can talk about frequency allocations all you

A contradiction in terms -- no such thing as a "legitimate freebander."

And, since when did working DX on CB become legal?

124. Just so you know....

Newsgroup: rec.radio.cb
Date: 2002-04-02 05:07:08 UTC
From: Randy <rchapman8@houston.rr.com>
Message-ID: <00bq8.93512$Dv6.3718997@typhoon.austin.rr.com>
Source record: 119987

I've been there, done that. I've operated in the "freeband", operated in excess of 1KW(which I hear is nothing by today's standards), and caused excessive amounts of TVI. That being said, and because of my "sins", I choose not belong to either side of the legal-vs-not legal argument, although I am seriously biased against those that use 27.025 as a frequency to run ridiculous amounts of wattage for no apparent reason. They are the sole reason I chose the path to freeband that I took. I got tired of these morons "bleeding" all the frequencies that I had...and don't give me the usual garbage about a better radio. Nothing will overcome that kind of abuse of the band. I've run ham HF rigs on CB before I was licensed, and it just don't matter. As has been stated before here, if you run a clean station, no matter what the rig, the chances of problems are negligible. If you choose to ignore the warning signals of impending doom, then so be it, that's a choice you have made, and if you get caught, that's your stupidity.

Now, not that I'm any sort of guru at all, but having been involved in radio for more than 30 years, I do know bullshit when I see it...and there's lots of it here. Dave spouts a disproportionate amount of it, coupled with his distorted views of why thing are the way they are, and his Voodoo CB rituals, I felt the need to take him to task. I've done that, and I've told him in no uncertain terms that I will be here to disagree with him when the voices start talking to him and he relays that information here. And that applies to anyone, not just Dave. Got that Train?

I will debate anyone face to face, or here when I feel that they are wrong. Or, if someone wishes, I'll take it to email...not a problem. The fact remains that I cannot stand disinformation or bullshit, whatever the medium, and I will confront you with the facts to support my argument. If you don't like it, so be it. It's not my problem, it's yours. Deal with it.

Now...probably having offended at least half of the readers here, I do offer an olive branch of guarded peace. If you screw with me, or post bullshit, I will call you on it. That's just me, and there is no getting around that. I am not politically correct, and cannot stand that term. I am who I am, and that's that. I have no tolerance for stupidity, period. It's cost me in personal endeavors, and I'm certainly prepared to deal with it here. Got it, Twisty?

To all:

Take care, and I do wish you happiness, whatever that may entail.

>the switchable fuse box.

You know Dave this is probably the most intelligent statements you've ever made. There is no real need to go to the battery for the radio,it's wasted effort and wire. CB radios don't draw enough amperage to warrant going past the fuse panel.
Noise on the radio can actually be picked up by the power wire in the engine compartment.
Mike

Hmmm... Disinformation like your insinuations that I am N7VCF? or
Voobner? And you plan to confront it in what manner? Like an
anti-legal campain thinly disguised as spam complaints? Or suggesting
that I should behave myself or you will spread some information about
me? I called you on that one, and I'm still waiting for you to post
that elusive info. Or how about when you cited my web page and
suggested it hurt my credibility? All you did was hurt your's, Randy.

You cannot stand disinformation or bullshit? Then quit spreading it.

Well no worries, it is now wired to the fuse box...but I'm still getting this "whir" in the speaker...the pitch goes high or low right along wth my car's acceleration. I was hoping the fuse panel wiring would eliminate this noise but it didnt. :(

If it is a "whine", then it is alternator noise. If it sounds like static,
then it is from the spark plugs/wires.

As recommended by others, try wiring directly to the battery. This can
be temporary, to see if that eliminates your noise.

Hello,

I'm thinking about buying a Texas Ranger TR-696F. I've searched the archives on google, and it seems like people think these are pretty good radios. Anyone have any related experience or opinions regarding these radios?

Also, I found some reviews of these radios from back in '98 when they first came out. The authors name was Sean (aka 'bigfoot'). Is he still around?

TIA,
Tom

Message-ID: <dTiq8.33823$09u.15033@news02.bloor.is.net.cable.rogers.com>
Source record: 120009

Hello everybody and thanks for reading this.

I have my ham radio basic licence (I'm in Canada) and have recently become interested in CB radio. I wand to buy a couple of handhelds for a couple of reasons.

I would like to be able to keep in touch with my girlfriend when we're out on bike rides, etc. I would also like to use it to pick up other traffic and also talk to strangers now and again, etc.

My question is what should I be looking for? I have been scouring eBay and found such a variety. There are all sorts of different Cobras, etc. as well as many other manufacturers (as I'm sure you know).

I have spoken to somebody who has a pair of brand new GE CB'S (#3-5980A) for a pretty decent price. Does anybody know anything about this radio?

Other than the bells and whistles, are they all going to give me approximately the same range? Also, it is possible to improve the range if I have one unit in my car connected to an exterior mag-mount style antenna?

Thanks in advance for any advice and help. I know I sound ignorant but I really don't know much about CB radio. I've been a ham on 2-meters for a while but want to be able to communicate with my girlfriend who is unlicensed.

Thanks!

Nick

Hello Mr. Lee,

It's hard for me to equate the violation of the 155.3 mi. rule with a
"wanton diregard for the law," but let's say that it IS "symptomatic"
of a "problem." What are you personally doing to try to alleviate the
problem?

While I certainly don't condone out-of-band operation and/or excessive
power output, I don't believe for a moment that working DX on the
legal 40 channels with 12 watts P.E.P. makes one morally deficient, a
social deviant, or a criminal. There are plenty of "laws" that are not
only silly and unenforceable, but just downright wrong. Before you
say, "Well, if everyone just chose the laws they're going to follow,
then society would be doomed." STOP! That's exactly what happens, and
society is no worser for the wear. Most everybody goes through a
thought process when they obey rules, regulations, laws, etc. and
makes a conscious decision as to the merit of said law and the
consequences of breaking said law. When you stop at a red light, you
don't do so just because those in authority told you to, right? You
know it'd present a dangerous situation and is for the benefit of us
all. Same with speeding. No one can argue that stealing from others,
whether directly or by fraud, etc. is wrong. However, there ARE some
laws that are routinely broken and they are broken because individuals

have made a conscious decision that this particular infraction is sufficiently minor or that said law is just plain wrong. (And the fabric of the time/space continuum remains intact.)

Are you aware that up until recently, (Just a few years ago, if memory serves me.) tha last southern state removed a law from the books that prohibited inter-racial marriages. Now if this offends your sensiblilties as a human being, then I'd say you're pretty normal. But it was a law, and the law's the law, right? How would you counsel your own son or daughter if they faced the decision of moving out of state or living as "criminals." Gee, "criminal" is kinda harsh, eh? But hey, the law's the law! Thankfully, there are federal laws that struck these down, even though they were still on the books. The really frightening thing is that there was opposition to the removal of these laws from the books. Now I realize that this analogy is a bit extreme, but what about jaywalking on a street with no traffic or cruising with the pack at 60 m.p.h. as opposed to 55? I understand the zeal of those who want to follow the letter of the law, but some common sense must be added to the mix. Everything is not black and white or cut and dry. There are some folks that'd still be holding their breath today if breathing were outlawed yesterday, to each their own. Wonder how that soccer mom is doing? You remember, the one that got dragged out of her station wagon, handcuffed, and arrested in front of her terrified kids...for violating the couny's seatbelt law. Hey, the law's the law. Damn criminal!

I think his 3000 QSL cards exhibit the characteristics of 11-meter propagation and human nature. If you hear a distant station, say hi.

> It is difficult for those of us who are amateur radio operators and who

You will find that MOST Christian holidays fall on or about on Pagan holidays. This was done to lessen their importance (Pagan holidays) to the masses. Pagan holidays have been around longer than the holidays of other religions because the Pagan rituals date much farther back than 2000 years ago.

Damn! Twisty really let me have it, didn't he?

-Nah, you did it to yourself, as do all the pe(s)ts,,,I just enjoy pointing these things out.

ROFL! If Jester hadn't replied to him, I'd have never seen it...

-Do normally direct a post toward someone then killfile them or is this another pathetic attampt to mask the idiocy you already shared with the group?

I've got the OE version of Bozo Flush filtering Twisty out of what I receive.

-Damn, you get more credibile by the day. Looking to Georgie for support...now THAT'S funny.
If you don't want a reply, why would you have addressed me? Never mind, your lost account is plenty reason. Thank a close friend for letting that cat out of the bag.

What to do, what to do...guess I'll get the broom out and sweep up my fractured ego before Twisty grinds it to dust in his literary grist mill.

-You already did that yourself and shared it with us, I simply pointed it out after your unprovoked attack.

Now then, guess I'll call WebTv and see if can get one of those real-big-screen computers so that I can make heads or tails of the ones and zeros that I keep seeing here.

-Maybe you should, you may acquire something you have failed to grasp all your life....common sense..

In the meantime, I'm gonna call Roadrunner and see if I can get a really cool banner placed at the bottom of all my messages. Whaddaya think Twist?

-About what? Your losing face and struggle to turn topics? I think of you the same as the rest of the malcontents.....

Sound like a plan? Oh never mind, I wont see your reply unless someone quotes it.

-Perfect. You could have saved yourself the embarrassment and trouble by not addressing me in the first place, but these are simple things, ones I don't expect you to comprehend.
.

BTW, how's the CB working?

-Which one?
By the way, I didn't see you yesterday or I would have wished you a
happy birthday, so happy belated.

From: S3Buell@SBCGlobal.Net. (Landshark)
Damn Randy, and George
let me have it, if it weren't for your reply with him I would've never seen his mentioning of me again in each of his posts..... Thanks much <G>
Landshark

Well wouldn't that apply to
most everyone?

All I did was have a thread going with Sparky
concerning the differences between Laws to
Regulations and our friend George (Wanna be Prozac)
jumps right into the conversation with insults.
So his whole goal for almost two years has
been to change screen nics to by pass
news reader filters, harass and insult people
that post on this group.
Watch what kind of response he leaves Mopar,
I won't see it, but I can guarantee that it will
be insulting, with regards to sexuality and harassing
in nature.

Take care,

Landshark

Yeah I remember reading some thing like that
too. But the fact remains that if your neighbors house
is say with in 100' of your antenna, your running an
amp, you will probably interfere with their equipment.
In most cases today houses are placed cheek to cheek
and with it like that, it is damn near impossible to run
any sort of power with affecting one of your adjacent
neighbors.

One more thing Twist-Tie, I also am a licensed amateur.

-I must really rubbed you the wrong way for you to still be replying to my reply to your reply...anyways..so what? Please share with us in what manner the license somehow matters in this venue.

Look it up...others have. Someone with your alleged skills should have no problem with such a minute chore.

-How long have you been laying in the grass computing all the skills Lelnad attributes to me? Is there enough for an old testament yet of rec.radio.cb?

Matter of fact, I need to check, but I think I'm up for the first renewal shortly.

-Now that you have shared that you not only hold a license, but also that the length of time one has held a license apparently is believed by you to be some type measuring stick of accomplishment, I really do not need to compel you to say anything else.....lids like you are widespread..

Damn, ten years and no upgrade. Lemme go beat the kids again! Little suckers want all your time!

-Well, now that you appear to have simmered down a bit and have your temper back under control, this is the type of coversation we could have had in the beginning...there was no need for you to come out here acting like you were sharing a bottle of MD 20/20 with Lelnad and calling names. Kapish?

How's the CB doing again?

-I am afraid you have me cornfused with another. I currently use an HF rig at ten watts for my freebanding activities.

From: pwerz@netcarrier.com (Paul Werz)
being involved with CB radio since 1969 and currently operate DX on 11 meter band with more than 3000 QSL cards from just about every division in the world .I would like to speak on behalf of a few of us who operate in a professional manner.My station runs clean with no amplifier or power mike and a PDL2 beam.I operate in the 11 meter band and do not interfere with anyone around me.I have a close friend who is a FCC coordinator and the problem is not with the freebanders but the overpowered mobiles and base staions who use excessive power to talk local and interfere with everything in their neighborhood.You can talk about frequency allocations all you want but legitimate freebanders stay away from ham frequencies and any other freqs that they may interfere with.If you claim that they dont belong where they are at then you tell me in thirty years of being on them how come I dont hear them in use.(Official qoute from a federal source" They have been obsolete for years"}
-

-(sound of applause) Ahhh, every once in a while, a breath of fresh air comes in and someone actually knows what time it is and what is going on.
Nevertheless, truth is looked upon as heresy among our anticb malcontents.......

Bert, I wrote the same post that you did a few years ago, touching on almost each and every aspect that you just managed...on the same note, I received this in my email just now.....
-
Twist,
This quotes AA7bq. He founded qrz.com
He had this to say about their ways: "I see a lot of amateurs preaching hellfire and brimstone regarding all sorts of things and it often makes me think that if ham radio is what these guys do for fun then I'd hate to see them at work... Yes, this is a (lightly) regulated hobby, but a hobby nonetheless. Some guys are way too serious about a lot of things having to do with it. Breaking the law is a bad idea, and I wouldn't have anything to do with it. A day doesn't go by, however, in which I don't witness someone breaking the law somewhere. I keep my blood pressure low by not worrying about them and instead taking care of myself. It's a bummer that this is a self policing hobby because that means that we encourage a bunch of wanna-be police officers in our ranks. Imagine if your local highway patrol were replaced by a self-policing citizenship. "Lock and load Momma 'cause I'm headed for the grocery store!".
My definition of a hobby includes the word fun in it. How about yours?
 Are other people having fun at your expense? Hmmm, there are a lot of other hobbies you know...

3s
Benjamin
-
With minds like these, ham radio may be able to eek out a meager existence for awhile before the lid-types ruin it for good. Many, righteously so, have been shunned by the bettter of the amateur community and sentiment leans toward the opposite of where these wannabe radio patrols find themselves. These are the communities weakest links and a boil on the face of radio. Power can corrupt, but absolute power corrupts absolutely. Glad to see the tide is getting stronger against these renegades.

Source record: 120026

From: rchapman8@houston.rr.com (Randy)
I've been there, done that. I've operated in the "freeband", operated in excess of 1KW(which I hear is nothing by today's standards), and caused excessive amounts of TVI. That being said, and because of my "sins", I choose not belong to either side of the legal-vs-not legal argument, although I am seriously biased against those that use 27.025 as a frequency to run ridiculous amounts of wattage for no apparent reason.

-Yea? So why did you equate me with it?

They are the sole reason I chose the path to freeband that I took. I got tired of these morons "bleeding" all the frequencies that I had...and don't give me the usual garbage about a better radio. Nothing will overcome that kind of abuse of the band.

-Ok. So you are entitled to your opinion like everyone else.

I've run ham HF rigs on CB before I was licensed, and it just don't matter. As has been stated before here, if you run a clean station, no matter what the rig, the chances of problems are negligible. If you choose to ignore the warning signals of impending doom, then so be it, that's a choice you have made, and if you get caught, that's your stupidity.

-Absolutely.

Now, not that I'm any sort of guru at all, but having been involved in radio for more than 30 years, I do know bullshit when I see it...and there's lots of it here. Dave spouts a disproportionate amount of it, coupled with his distorted views of why thing are the way they are, and his Voodoo CB rituals, I felt the need to take him to task.

-Dave is a mood lightener. Just like the rest of things involving radio, some of you take things way too damn seriously and literal.

I've done that, and I've told him in no uncertain terms that I will be here to disagree with him when the voices start talking to him and he relays that information here. And that applies to anyone, not just Dave. Got that Train?
I will debate anyone face to face, or here when I feel that they are wrong. Or, if someone wishes, I'll take it to email...not a problem. The fact remains that I cannot stand disinformation or bullshit, whatever the medium, and I will confront you with the facts to support my argument. If you don't like it, so be it. It's not my problem, it's yours. Deal with it.
Now...probably having offended at least half of the readers here, I do offer an olive branch of guarded peace.

-Start a war, lose a battle, offer peace? Sure. I thought we had it before you came at me for no other reason either than malice or a lost access.

If you screw with me, or post bullshit, I will call you on it. That's just me, and there is no getting around that. I am not politically correct, and cannot stand that term. I am who I am, and that's that. I have no tolerance for stupidity, period. It's cost me in personal endeavors, and I'm certainly prepared to deal with it here. Got it, Twisty?

-No, not at all. Explain to me why you attacked me under your RR account for no reason.

To all:
Take care, and I do wish you happiness, whatever that may entail.

-It entails not caling names and starting a bunch of guff. Simple enough, or was that your unstated agenda?

Call-And-Response

West Virginia good ol' boy Herman Jamerson was drafted by the Army
and, on the first day as an enlisted man, he was issued a comb...

The following day the Army barber sheared all of his hair off.

On the third day the Army issued him a tooth brush...

On the fourth day the Army dentist yanked several of his teeth out.

On the fifth day he was issued a jock strap...

That afternoon Herman went AWOL.

>I'm not the one that still believes in "little green men". BTW, how's that
>search coming? Found any yet?

Nothing like a loaded question to start the day. Where on my site does it say I believe in "little green men"? I linked the SETI site because it's a cool site. I don't think it implies a belief one way or the other, it is simply a search for empirical evidence. I also think it's a neat idea, simply because the search for intelligent life on Terra seems to have gone bust. BTW, did you get to the page on "The Incident" site where it explains the whole thing is an intentional hoax to show just how gullible people can be? Apparently not.

So what sites do you have linked on your web page, Randy?

>> You cannot stand disinformation or bullshit? Then quit spreading it.

well let's see shark.....our little comcast creep, so far this year has been:

markbeck666
jester
curious george?
george of the jungle?
genderbender
bad apple
hamaholic
one high powered mofo
tooltime
suckmyass
middlefiger4(dumbass misspelled middlefinger while he was setting up the screen nic)
middlefinger4
pipedreams
scott(unit 69)

this guy is really a piece of work isn't he??? thinks that putting names out there on the net, changes something or intimidates someone....i have put up with people like that for a long time and it always ends up the same...the comcast creep or anonymous acolyte as has been referred to from time to time will continue this crap until someone finds out who he is and then it will stop.....you would think that hams supposedly are a step up from cb but from hanging around here for several years has changed my view of that misguided thought....

You have a few choices:
(a) Talk on Ham to Unlicenced girlfriend;
(b) Get rid of girlfriend & get YL Ham;
(c) Find an old Maxon 27LP Walki talki. These are great units that can be tuned up to put out more if you need it.
(d) none of the above!

Dave!!!!!!!!!!!!!!!!!!!!!!!!

Nick, I'm ignorant on the Canadian licensing. We have a codeless tech license here which is ideal; without needing Morse, anyone can have a license in a matter of weeks. Regardless, a 27 MHz handheld will not have much range. Maybe a mile or so if it runs 5 watts. I'm sure you are used to hitting repeaters 20 or 30 miles away with your 2 meter rig; things will be different with a handheld at 27 MHz. If you run it into a decent external antenna, then it will have a range similar to a normal CB radio. This, I assume, may be fine at times; other times you really want a handheld. For bike rides, the handheld will work. If you want any distance .... just realize the a full quarter wave whip is nine feet long. That tiny antenna on a handheld CB is NOT efficient; neither is the ground. If a mile or so will do you, then seek more advice as to which model radio you want; otherwise, consider what licenses may be available to your girlfriend.

73 from Rochester, NY
Jim
ps - if this is the biggest problem you ever have with your girlfriend, you are in better shape than anyone else on this board!

Dave, as I stated, I am ignorant of Canadian amateur laws. He'd have to check on your answer (a) - one way communication or communication with another service (i.e. he talk on amateur and listen on CB) is PROHIBITED here in the US. As to the Maxon, any idea of range it will get? If so, leave another note for him as this is the info he is looking for.

Actually, a lot of RFI is cause by feeding in improper load such as a dipole directly with coax and not putting a balun in. Safety grounds are absolutely necessary; rf grounds are not. Either that or I still haven't seen the ground connection on my Direct Tv satellite ... Of course, if you are feeding a Marconi ... you need a ground.

: ==
:
: 3 held in pickup homicide
:
: Two Fresno men, boy arrested in burning of a Fowler man.
: By Jennifer Fitzenberger
:
: The Fresno Bee
: (Published Thursday, March, 28, 2002 5:06AM)
:
:
:
: Two Fresno men and a boy with gang ties were arrested Tuesday night
: on suspicion of murdering a Fowler man and burning his body in the bed of a
: pickup truck.
:
: Jesus Rosalio Lopez, 27, Ramiro Roman Jr., 18, and a 17-year-old boy
: are in custody on charges of killing D.J. Hunter, a 19-year-old Fowler High
: School graduate and Reedley College student.
:
: Hunter, who was burned beyond recognition, was positively identified
: Wednesday through dental records.
:
: Firefighters found Hunter's charred remains and his stripped GMC
: truck about 6 a.m. Friday on South Muscat Avenue west of West Avenue
: southwest of Fresno.
:
: Hunter is the grandson of former Fowler Mayor Don Wright. His family
: owns an oil company in Fowler, a community of about 4,100 residents in
: south Fresno County.
:
: "You just get kind of numb," Sandra Feaver, a longtime family friend,
: said of Hunter's death. "Now you know it's real."
:
: The suspects also face charges including carjacking, robbery, arson,
: kidnap and receiving stolen property. They are being jailed in lieu of more
: than $1 million bail each.
:
: Feaver said Hunter's family is glad the suspects were arrested so
: soon: "People are so jealous of what other people have that they would take
: a life for a pickup. It's scary to know these people live in this area."
:

: Lopez and Roman were arrested during the execution of four search
: warrants on Fresno homes Tuesday. The boy was arrested after authorities
: found him riding in a car, sheriff's Sgt. Toby Rien said Wednesday.
:
: Tips from community members led authorities to the suspects, Rien
: said.
:
: Lopez is on federal probation for drug charges, officials said. It
: was not immediately known whether Roman or the boy have criminal histories.
:
: Authorities found stereo parts from Hunter's truck and other evidence
: inside the suspects' homes, said Rien, adding that his detectives are
: searching for more suspects. "This vehicle was stripped, and it takes a lot
: of people to do that," he said.
:
: Officials are investigating whether three guns found in the homes are
: linked to the crime.
:
: Although an autopsy has been completed, authorities have not released
: Hunter's cause of death.
:
: "This has been like a puzzle to our detectives, and we're putting the
: pieces in place," Rien said. "This still is early in the investigation. We
: have a lot of unanswered questions."
:
: Detectives don't believe the suspects knew Hunter before meeting him
: after 1:30 a.m. Friday at a convenience store in southeast Fresno. Rien
: would not name the store or say exactly where it is located.
:
: Hunter reportedly had left a friend's Fowler house about 12:30 a.m.
: Friday and was on his way home.
:
: "There really wasn't much of a connection other than being in the
: same place at the same time," Rien said. "Their meeting probably was not a
: positive one."
:
: The sergeant would not say what happened afterward, or pinpoint a
: motive.
:
: Rien, however, said "it's a possibility" the suspects killed Hunter
: to get to his truck, which is worth about $20,000 and had 20-inch chrome
: rims.
:
: The truck was voted best car by students at Fowler High School.
: Hunter, who played varsity basketball there, kept the truck spotless.
:
: Hunter's friends have tied yellow ribbons around light posts, taped
: photos of him around town and made key chains and car decals in his memory.

:
: 3 held in pickup homicide
:
: Two Fresno men, boy arrested in burning of a Fowler man.
: By Jennifer Fitzenberger
:
: The Fresno Bee
: (Published Thursday, March, 28, 2002 5:06AM)
:
:
:
: Two Fresno men and a boy with gang ties were arrested Tuesday night
: on suspicion of murdering a Fowler man and burning his body in the bed of a
: pickup truck.
:
: Jesus Rosalio Lopez, 27, Ramiro Roman Jr., 18, and a 17-year-old boy
: are in custody on charges of killing D.J. Hunter, a 19-year-old Fowler High
: School graduate and Reedley College student.
:
: Hunter, who was burned beyond recognition, was positively identified
: Wednesday through dental records.
:
: Firefighters found Hunter's charred remains and his stripped GMC
: truck about 6 a.m. Friday on South Muscat Avenue west of West Avenue
: southwest of Fresno.
:
: Hunter is the grandson of former Fowler Mayor Don Wright. His family
: owns an oil company in Fowler, a community of about 4,100 residents in
: south Fresno County.
:
: "You just get kind of numb," Sandra Feaver, a longtime family friend,
: said of Hunter's death. "Now you know it's real."
:
: The suspects also face charges including carjacking, robbery, arson,
: kidnap and receiving stolen property. They are being jailed in lieu of more
: than $1 million bail each.
:
: Feaver said Hunter's family is glad the suspects were arrested so

If you out hiking and biking, the long antenna needed for am 11 meter radio isn't real convenient. Get a normal CB mobile for your car and a pair of FRS talkies for you and the girlfriend. The FRS will work about as well and perhaps be more lcear, plus the antenna is only a couple inches long. Easy to handle. Forget the CB talkies. Therfe's a reason so many of them are for resale.

Contact Industry Canada and double check this answer, but the frequency allocations are the same for both the USA and Canada. I won't speak to Mexico. They follow a different tune. FRS is legal in Canada, no problem......

Being as nobody seemed to answer this question from another poster
seriously, here it is:

To get the crystals required to modify for 11 meters go to
www.kenselectronics.com and you can puchase the crystals (four required) for
$8.00 each. Replace the 10 meter crystals for bands 10a, 10b, 10c and 10d
(x09, x10, x11, x12) with the following values from Kens Electronics:
40.4875 (26.000~26.500)
40.9875 (26.500~27.000)
41.4875 (27.000~27.000)
41.9875 (27.500~28.000)

Any alignment is usually not required but could be peaked a little if you
know what you're doing!

Hope it helps!

Enjoy!

Dave

Thanks for the info. You're right, the FRS is likely to be a LOT more user friendly on bikes. A friend of mine used one in his truck whilst towing a boat in order to keep in touch with his wife who was driving a car ahead of him. He said the things worked good for over 1/2 mile from INSIDE the vehicles! Not bad. Outside, they should be capable of more range (not likely more than a mile or two, tops).

Beware Landshark is not suspect but confirmed to post in alt.sex.ts NG's, as anyone can clearly see he has no technical background and just hangs in here trolling and waiting for little boys perhaps. Why havent any of the ISP's done anything to me you stupid son of a bitch maybe your complaints are unfounded , border on delusional and have no basis for fact. Giganews go cry to them and tell them i am putting there name in my header you stupid jackass thats who comcast uses for there NG feed perhaps thats why they laughed at your complaints. Aol we all know i don't have a aol account don't we? So complain to them tell them old George Busch is being mean to you. Since they can see all your past post when i send them the file and show them how much of a sniveling cry baby you are. I htougth I was killfiled why does this guy have a hard on foor me , Ill tell you why he likes men plain and simple. And he knows I am every womens dream and every mans night mare. Landshark when was the last time you made a post related to CB radio? Crying about old me does not constitiute talking about cb? Did you get that box of hankies I sent you. I see your gonna need them and a box of depends.

_G_

_._
Beware of Landshark he has been know to post to seedy Newsgroups,
and to flirt with other men, he has also been caught forging others and
posting harassing style posts with absolutly no useful content unless your
gay looking for love. forward any of his gay emails to the recyle Bin and
be careful
avoid all contact with him unless he provides a recent aids test. That is
all!

My Follow Up
Why are the ham operators so concerned with the so called criminals (freebanders) Like I said the few of us respect where they are at and avoid there frequencies .As far as the 155.3 miles goes who are we harming.The few of us who do operate in those freqs have freq lists and know what a particular freq is used for and avoid them .
Dont forget Iam only saying a small percentage of us operate professionally .The bottom line I guess is that Iam doing what a ham operator does at less of a cost in equipment and not being licensed..I have made many contacts around the world and have made a lot of friends just as the ham operators do.There are probably more organized 11 meter Dx clubs than hams .I will bet you there are even some hams that are on those freqs but wont admit it (you guys know why) the DX is good..

:
: Hello Mr. Lee,
:
: It's hard for me to equate the violation of the 155.3 mi. rule with a
: "wanton diregard for the law," but let's say that it IS "symptomatic"
: of a "problem." What are you personally doing to try to alleviate the
: problem?

I'm obeying the law.

: While I certainly don't condone out-of-band operation and/or excessive
: power output, I don't believe for a moment that working DX on the
: legal 40 channels with 12 watts P.E.P. makes one morally deficient, a
: social deviant, or a criminal. There are plenty of "laws" that are not
: only silly and unenforceable, but just downright wrong. Before you

We're not marching on Selma here; we're discussing Part 95. There's a huge
difference.

: say, "Well, if everyone just chose the laws they're going to follow,
: then society would be doomed." STOP! That's exactly what happens, and

That isn't exactly what happens. That's what you'd like to *believe* is what happens.

On CB, violating Part 95 has no real consequences, but annoying other CB operators does have consequences. Hence, CB is run by "pack rule", and not the law of the land. We who are critical of CB think that it should be the rule of law which dominates rather than the rule of the pack.

: society is no worser for the wear. Most everybody goes through a
: thought process when they obey rules, regulations, laws, etc. and

Enough already!

People who have difficulty with an inconvenient concept (obeying the law) always get wordy when they attempt to justify law breaking. There is no noble cause or unjust law here -- just operators who want to do whatever pleases them, and whose actions say "to hell with everyone else."

It's simple:

1. It is against U.S. law to talk to any CB station more than 250 km distant.

2. Any CB operator who does so is breaking the law.

3. Any CB operator who intentionally and repeatedly does so is showing wanton disregard of the law.

Therefore, Mr. Werz has been operating in wanton disregard of the law.

Look: I don't happen to like quite a few of the regulations governing amateur radio, because I regard some of them as downright silly. If I applied your logic to Part 97, why I'd be using whatever mode I wanted in the portions of the bands reserved for CW. If the non-U.S. stations can operate ssb there, why shouldn't I, especially if I want to have a nice DX contact with one of them?

The answer is: It is against the law, and I don't do it. Neither do most of my fellow operators. Instead, we lobby to have the law changed if it really bugs us.

The only people who have difficulty grasping the idea of obeying the laws are those who need to rationalize their own law breaking.

You say (below) you are a freebander. There's nothing "professional"
about poaching on frequencies assigned to other services, government
services mind you, no matter if they are using them or not. What you
do is illegal and similar to looting.

> My station runs clean with no amplifier or
> power mike and a PDL2 beam.I operate in the 11 meter band and do not
> interfere with anyone around me.

How do you know that? You're unlicensed, untraceable, and have no idea
who's frequency allocation you're poaching on.

> I have a close friend who is a FCC
> coordinator

Name? Office? I'd like to talk with him. Being an FCC employee he has
no reason to hide his identity.

> and the problem is not with the freebanders but the
> overpowered mobiles and base staions who use excessive power to talk
> local and interfere with everything in their neighborhood.

If freebanding is not a problem why is it illegal? Sounds like wishful
thinking on your part. Are you sure this him talking and not you
making things up?

> You can talk
> about frequency allocations all you want but legitimate freebanders stay
> away from ham frequencies and any other freqs that they may interfere
> with.

Again, there's NO SUCH THING AS A LEGITIMATE FREEBANDER. Freebanding
is illegal and irresponsible.

> If you claim that they dont belong where they are at then you tell
> me in thirty years of being on them how come I dont hear them in
> use.

You have no idea who's frequencies you're on. Just because they don't
transmit doesn't mean they're not there. Do you expect a legitimate

government radio user to come up on their assigned frequency, find you there, and start arguing with you? Get real. Unlicensed freebanders have probably DENIED many LEGITIMATE GOVERMENT USERS the ability to communicate. Is that something you're PROUD of?

>(Official qoute from a federal source" They have been obsolete for
> years"}

OK, if it's an official source, how about a name? That would surely lend credence to what you say. So how about it. Produce this FCC official who has given his blessing to CB outlaws.

As you noted I am not particularly worried one way or the other what you do and it is, I think, a fair statement that us long-termers probably care less than the more recent converts. There is no teetotaler like an ex-drunk and no proselyte like a recent convert.

But I do have some questions:

1. You made your decision and live with it, fair enough. So why do you care what me, any other amateur, or anyone else thinks? Why try to justify it?

2. DXing is not my can of worms and never really was. It might be neat at 190 kHz on five watts and definitely keeps one awake on 50 MHz but DXCC on a weekend on 10 meters is certainly possible on pretty cheap gear. Same propagation gods smile on 10 and 12 just like they do on 11. About the only thing that changes is cheaper postage thru the bureaus.

3. Do you want approval and respect to go with the 3000 cards? You won't get it for an imitation of real radio no matter how good the imitation. Do your thing, don't ask, don't tell and we will rub along just fine. And at the bottom of the spots I will be dittybopping on 30 meters and you

won't. Why not just leave it at that?

Yeh right. I guess that's why everytime I listen to 26.915 AM, there you are talking on it (illegally I might add). It's kind of funny that you say you are
not a truck driver. We thought you were one, because you sounded like one. Everytime we monitor that frequency for illegal activities, all we here are 'Dr
Pepper' this and 'Dr Pepper' that. So excuse me for adding two and two and ratioalizing that you were the same person, trying to offload one of your junky
old 10 meter class c amps on here and we both know who is going to buy it. If
you don't care, then sorry but we do. So you do what you have to do and so shall
we.

Well Rg, you are a Brit. And what do you think we as Americans can do about
your
illegal activities? Not much. So this is a moot post. We are only concerned
about illegal amplifier sales (mainly) to cb operators because we still like
to
talk on cb's and I can categorically guarantee you that our radios do not
have
any more forward swing than 4 watts pep, vis a vis FCC rules and
regulations. So
that is all I myself can say to you . I wish you well but the two of us have
about had our fill of illegal radio operations and we are going to do
something
about it. I am sorry that some do not like this, but believe me, it is best
for
everyone concerned. Thanks.

I am thinking you are correct that FRS is legal in canada, but I am
also thinking that GMRS is not legal in canada so that is out of the
question as an option.

Hey Dick, any experience with the 6AQ5? I just picked up an old
Pearce-Simpson CBD-5 (a primo catch, BTW), and it uses that tube for
the final. I didn't think it would work too well at 27MHz, but there
it is and it works fine. Now that got me thinking, if the 6AQ5 works
well as a QRP final, and I have so many in the junk box, maybe I can
put them to good use. Any ideas (other than target practice)?

I'll bite, just this once.
WHAT are you trying to say with these fake addresses posting continuous crap?
That there are terrible people in this world who do terrible things? Well DUH!
That some of these people are not white? Well DUH! again.
(By the way, Hispanics are Caucasian)...
If you're trying to say that no criminals are white, you're seriously bent up
in some friggin' nuthouse.
If you're NOT saying that, then you have no point in posting stories here, or
anywhere for that matter.
So which is it? Are you an idiot or a lunatic?
My guess is you're nuts.

I know I am crossposting, but am hoping that someone in some group can answer my questions.

I picked up a small linear this past weekend with intent to use it VHF high band. I have no clue if that was its true intention, so I am asking:

1) What frequencies might this cover?

2) What would be the power output?

Here are the details: VHF Engineering, Model PA4010H, Serial: 165X

Transistor inside: Motorola pill 2N6084

wrote:

>My Follow Up
> Why are the ham operators so concerned with the so called criminals
>(freebanders)

Because there is a legal means of doing what they want to do, but they
don't want to do it. It is highly suspected that they are just being
lazy, and don't want to study a little to pass the ham license. Lazy
people rightfully get little or no respect.

>Like I said the few of us respect where they are at and avoid
>there frequencies .As far as the 155.3 miles goes who are we harming.The few
>of us who do operate in those freqs have freq lists and know what a
>particular freq is used for and avoid them.

If the FCC should ever decide to really enforce the law, you're toying
with some fines with lots of zeros behind a non-zero leading digit.

I don't know who you're hurting - maybe your kid that gets the idea
that obeying laws is optional. Or the other guy's kid - the other guy
you're talking to. Or maybe some legal users on the frequency you
don't know about. Maybe the reputation of the USA as being composed
of lawless individuals, not that the rest of the world doesn't already
have that opinion from seeing all the drug dealing, murders, etc. we
have. You're not in fine company there...

>Dont forget Iam only saying a small percentage of us operate professionally

Exactly. So by participating, you're promoting the use of illegal
frequencies, which attracts the "non-professionals", that likely
don't have or care about a list of legal users and cause them
interference.

>.The bottom line I guess is that Iam doing what a ham operator does at less
>of a cost

Huh? Howzzat? Your antennas cost less? As for the rig, you could
take the exact one you already have, retune it, and use it _legally_
on 10 meters. Might not even have to retune it if you are already
illegally there.

>in equipment and not being licensed..

What's a license cost right now? I think its somewhere around a
couple books of stamps, or a carton of cigarettes. Yeah, that ought

to break a bank...

>have made many contacts
>around the world and have made a lot of friends just as the ham operators
>do.

Illegally. If it doesn't bother you, it should.

>There are probably more organized 11 meter Dx clubs than hams

There are something like 650,000 hams, just in the US...

> .I will bet
>you there are even some hams that are on those freqs but wont admit it (you
>guys know why) the DX is good..

Yeah, there might be. Can't imagine what the attraction would be,
tho.

And in about 7 - 8 years from now, when sunspots hit their minimum,
you-all won't be able to get out of your own back yards, while hams
will be merrily working the world on 20, 30, 40, and 80 meters.

It was designed to be a miniature 6V6 audio output tube but does a lot of
things including about 6 watts in Class C at 27 MHz. Hell, I don't know,
a Sweet 64 might be a good audio amp for the local ballpark. QRP at 190
kHz. With enough negative feedback a pretty decent small stereo.

It does disturb one to have good junque and no use but then how did they
get to be junk???

Hey Frank,

Yeah, when I'm at work I use google. I know it's been given a bad rep but I really don't have another facility to post with. I don't want to pay a service, that's for sure. My kc2hmn@arrl.net addy redirects to my CompuServe addy anyhoo.

>BTW, I read a bunch of stuff about the FCC dropping the code
>requirement for HF. Is that true?

Yeah, it appears that Element 1 is at its death knell. The ITU treaty requirement will likely be removed in 2003, with Element 1 being dropped a short time thereafter. Take it easy, Frank.

My Follow Up
  Why are the ham operators so concerned with the so called
criminals (freebanders)

-Most aren't. It is usually the Johnny-come-lately to hammie radio, the power hungry mongrels, or one of a few that were forced underground among us because they destroyed their own credibility among the hammie family that you are seeing act the fools.

Like I said the few of us respect where they are at and avoid there frequencies .As far as the 155.3 miles goes who are we harming.The few of us who do operate in those freqs have freq lists and know what a particular freq is used for and avoid them . Dont forget Iam only saying a small percentage of us operate professionally .The bottom line I guess is that Iam doing what a ham operator does at less of a cost in equipment

-That's one of their problems.....

and not being licensed..

-And another......

I have made many contacts around the world

-And a third.....

and have made a lot of friends just as the ham operators do.

-These type you speak of make no friends nor have friends, shown repeatedly by the unGodly amount of time they spend crying about things on usenet.

There are probably more organized 11 meter Dx clubs than hams .I will bet you there are even some hams that are on those freqs but wont admit it (you guys know why) the DX is good..
-
-Of course there are hammies on the freeband,,there is a pathetic nocode among us trying not only to be heard from Chicago each day, but trying to jam the freq when he can't step on the conversation.....he needs a bigger box......doesn't' have a clue about HF...but it certainly is funny listening to him strain and get all excited when he can't get out....thought he was going to pop a gasket yesterday when he heard me and another reg in here talking and tried to interrupt our conversation..and successfully failed!

251. FA: Spitfire Mark II tube CB radio

Spitfire Mark II CB radio, vacuum tube
Item # 1343059601

Spitfire Mark II CB radio
A product of Cardon Import Co., Ltd

Vintage vacuum tube CB equipment. 23 channels, no extra crystals
required.

I've used one of these on air within the last five years and it worked
well. The case is in very good condition. Uses a four pin microphone
connector.

The other I have no idea about. Top cover has been dented and its
general appearance is not as good. It appears complete. If it doesn't
work it would be a good source of spare tubes or other parts.

Two power cords supplied. One radio has microphone clip on side of
cabinet, and there is one mobile mounting bracket included.

SLee claims:
<snipped for brevity>
Therefore, Mr. Werz has been operating in wanton disregard of the law.
Look: I don't happen to like quite a few of the regulations governing amateur radio, because I regard some of them as downright silly. If I applied your logic to Part 97, why I'd be using whatever mode I wanted in the portions of the bands reserved for CW.

-Not true. Organized, long term freebanders are very aware where they operate and take great measure to ensure against talking on an amateur frequency or one that isn't heavily used on the freeband.

If the non-U.S. stations can operate ssb there, why shouldn't I, especially if I want to have a nice DX contact with one of them?
The answer is: It is against the law, and I don't do it.

-Does this apply across the board to all laws?

Neither do most of my fellow operators. Instead, we lobby to have the law changed if it really bugs us.

-Difference is, many of us LIKE the law as it is, it keeps "yes men" off the freqs. Same analogy as the gun issue...when guns are outlawed only outlaws will have guns...no, yoo won't find many freebanders lobbying for change to open the freqs because the law as it reads, doesn't bug us.

The only people who have difficulty grasping the idea of obeying the laws are those who need to rationalize their own law breaking.

-Interesting. What is so difficult to grasp? WE understand the IDEA quite well. No rationalization is even needed except to reply to folks like you that repeatedly ask over and over, "Why?" It is these folks that feel they need a reason why we do what we do, not us.
If the entire country acted and thought like you, we would have no reason for laws. That is about as likely a scenario as anarchy ruling the earth because a minority group hung up on an outdated, unpopular mode of communication on AM channels chose to say so.

I am an extra class ham and have been since 86. Ham radio is on the way of the dinosaur. The reason is the attitude by most hams that they are superior to cb'ers and they are obviously the weight carrying group to the legislators. This is not correct. There is political power in votes and a big group of hams are too senile to even do that. It took the ARRL young staffers years and years to convince the old bastards that are elected year after year to the board of Taliban that run it to do away with morse code requirements to get in.. If you are a prisoner of war tapping on the wall of a cell somewhere in the middle east, I could see it would be handy. At one time I could copy and write down about 30wpm but that is like molasses in a world of water as far as speed is concerned. Ham radio's demise has one more very important reason to cease to exist. That is the development of cell phones and their availability and being more economical everyday. Several years ago, I had a repearer on 220 mhz with a 60 mile coverage area, everyone used the autopatch on a network that would get you taken off the air if somone got mad in traffic and happened to say "God-damned idiot" about a fellow motorist. Cell phones began to take over this traffic and for $29.95 a month now, who in the hell is going to go to all the fucking trouble to acquire a ham liscense? Not 99.9% of anyone that wants to communicate with their wife or a loved one. Ham radio has outlived it usefulness and the ARRL has become big business. They used to be a one book agency with help for anyone who asked for it. You could buy a handbook and that would get you a journal that would pretty much get you on the air, show you how to build projects,operate your station and keep you legal. Those are days gone by and won't ever be back again. All the above scenarios I described would cost you $2000 for the manuals to do those things. The average ham now couldn't cut a dipole to operate on 75 mtr phone. He would have to buy a piece of wire for a hundred bucks and an automatic antenna tuner for another five hundred to tune it to minimum swr that he saw in a book by some other idiotic fucker that wrote a book that says you can't operate with swr of over 1.2 to 1. Now they have a manual that costs $20.00 just to tell you how to keep your dog quiet while talking on 20 meters. I still keep my liscense current but I haven't been on the air for 6 years and don't plan on it again as long as my batteries on my cell phone are charged..

Don't want to burst anyone's bubble here, but, #2 diesel fuel will gel at 0 degrees, #1 diesel fuel is good to at least 55 below zero.

I drove truck in Alaska for a few years, in trucks w/o fuel tank heaters. No trucks were shut-off for any length of time when it was that cold either. And when I went to grocery store my car didn't get shut-off.

But even now I don't shut the truck off when it is cold out--I'm sleeping in, and don't want to get cold myself! I wouldn't say diesels were worthless in the cold either. Many of the goods to Edmonton, Fairbanks, Prudhoe Bay, Whitehorse, might not be delivered if it were not for trucks. Looked at your local Wal-Mart store lately--not too many near a rail station...

Other gun-rights groups said it is wrong to punish law-abiding Americans
for what may or may not happen.

"If this is a good way to make laws, then we ought to ban politicians,"
Larry Pratt, executive director of Gun Owners of America, told WorldNetDaily.
"We know from the past that some of them invariably become dictators, and
more of them become thieves. In order to avoid that, we ought to just have
no politicians."

That's easy -- just ask twistie. He claims to have talked with N7VCF
several times, and now admits that we are not the same person.

-Naa! You're the same person...I just wait for you to forget what lies
you told, just like Lelnad, and let y'all pee on your own leg.

Hell, if you can't believe twistie, who can you believe? Oops, that's
right, twist is the one that started that rumor in the first place, as
well as claiming I'm Glenn Sparks,

-Yea, well, I have communicated with Glenn, AFTER you insinuated you
were him, by means of being intellectually incorrect, deliberately.
He is the opposite of all you are. He is a great guy.

Leland Scott, and some guy from the Vancouver area. Take your pick,
Randy....

-Who someone may be has always been a desperate cry from the anticb
malcontents. No one cares. You beat yourselves to death. Now fire up
your illegal radio and meet me on your favorite freq, Franky!

Probably because those massive console stereo systems of the 50's and
60's took up too much space.

Well hell, that bites. Haven't they learned their lesson with no-code
licenses on 10m? And with FCC's pathetic enforcement, do they actually
think these HF no-codes are going to behave themselves? What a waste.
Screw the license, I'll stick to playing under Part 15.

This amp would work... but, it has no provision right now for gain leveling. That means that at the "low band" the gain would be pretty high. How high? I really don't know. You would have to incorporate some collector-to-base negative feedback to cut the gain at those frequencies...

Sounds to me they dumbed down the test and have allowed CB appliance
operators to become Hams, thats why many hams cannot tune a 75 meter antenna
many hams of yesteryear built there own radios how many CBers can say that?

>Now they have a manual that costs $20.00

Great 1 less asshole on the band hope your battery runs dead on youre cell
phone then what do you have? Don't pay your phone bill then what have you
got. Nake them phone companies rich. How many people at once can you talk to
on your cell?

Apparently sometimes, (not always from what I can deduce) I'm "squeeling" when I transmit. I dont think it does it all the time as I've been able to talk to people, but other times I'll say something and people are like "whoa who's squeeling?" or "someone's got a bad mic"...at this point I also notice the meter on the CB is WAY high in the transmitting area, when I'm keying.....what causes this?

I noticed the CB has a mic volume dial...but I thought it more so came into play concerning the PA function.....would have have anything to do with it, like being turned up to high?

nope, no beep button on it and yes its a moble- I am going by what looks like a scuffed up "2100" on the back of the radio. Actually moding the power isn't what we are looking for- its some better than stock modulation. It looks as if all the person that had the radio before him did was do the channel conversion. So, I am going to check out c-134 and see what happens.....

Matt

Oh by the way I have sold my equipment and got out of the hobby 1 year ago.I
have contacts from around the world all the time since I got into computers
and differant programs like ICQ,AOL,etc
My interest in the concept of radio is lost do to its archaic nature when
you have the technology of computers.
So there now,sorry to stir up such a mess you guys have a good ragchew
session as Iam unsubscribing to this group.
Nothing has changed for decades involving radio controversy

Sparky, there are no no-coders legally on 10. Operation below 30 MHz
requires a code test everywhere. The definition of an Amateur under the
treaty mentions Morse so it is not within the power of the FCC to waive
it.

I do not feel that Morse has any regulatory purpose, but I agree that it
will have an effect on Amateur Radio to flush the requirement and in the
short run at least it will not be a good one.

I think a factor here was that HF as a prefix is issued to Poland. They
didn't like, when the jokes were big, to be called Polish CBers

No I don't remember 23 a and b but For informational purposes it was 22 a
and b, which is why channel 23 is 27.255 and 22 is 27.225 that is where the
gap is the old realistic navaho's were able to get there if you turned the
channel selector to a certain spot between 22 and 23.

Oh yeah? Well, I hear ya there. I got my CB so in the event of an emergency, I could call out for help. Out here in WY, many of the places I go is way out in the sticks. Walking out is ok, IF you're young and spry. I'm not old but I ain't spry! Well, got it installed yesterday. Guess what happens this morning? Truck breaks down. Again. In the driveway. Thank God I wasn't out in the sticks. Why? I found out that the only people that use CBs out here are on the interstate. :(

Jerry:
You need to read Gail Riplinger's "New Age Bible Versions. Then you will know which translations are the "per-versions."

Why would you want to work on Sunday, when WE had a Biblical system here (most things shut down on Sunday until 1972)? Sunday IS the Lord's day (THE Christian Sabbath). I suggest that IF you want to work Sunday, go to Eurpoe or Isreal and you'll fit in, but expect judgment. BAD things happen to people that work Sunday; I have noticed that in the last few years! IN a Christian Country, you have Sunday off. IN a Humanist one, you is workin' ALL da time, cause YOU is a slave of a Babylonian economic system! 2 Chron. 7: 14 IS the answer that APPLIES TO YOU ! And NO, I ain't no goofy "pentacostal." It says "Languages," not jibbberish & babbelings!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

I'd like to see how you arrive at 99.5%. Most interesting. I've got some co-workers who are CBers. All are legal 5 watts with one exception - a 50 watt amp in a truck. I certainly disagree with the multi-hundred watt and kw+ amps, but can understand (not legal, but I can understand) why he uses a small amp in the truck. Otherwise, when the F layer is working, he can't raise his base from 3 miles away. The folks I used to bunny hunt with (yes, 30 years ago) were all decent folks; quite coherent, I assure you. I was trying to talk a CBer at the time into getting into amateur radio; after all, he had his 1st class radiotelephone license (as did I; we both worked at WROC-TV in Rochester New York). He said he wasn't interested - and mentioned the code. Being a pretty good stone-breaker, I mouthed some Morse at about 20 WPM (pretty much max by mouth; I was good for 27 on a straight key and 50 plus on a keyer. Don't ask about that Vibroplex; I never could send well with that contraption), saying 'but Morse is easy'. I wish what followed had happened to you. Talk about my mouth hitting the floor. He responded 'I know it's easy, but I'm just not interested'!!!!!!! Turns out he was a high-speed code operator in the service! Ever since then, I have firmly believed that the amateur's attitude can either help someone into the fraternity - or forever turn them off. I have a pretty good idea which side you fit into.

Learn to spell you stupid son of a bitch. I only talk to one person at a time on my cell. The phone companies have done away with most party line systems. With digital spread spectrum 2ghz phones, I don't have to worry about you or any cb operator listening to my conversations if I want to talk about, even a political discussion without raising the ire of some right wing idiot trying to preach to the choir. Your fucking radio shack scanner can't find it and decode it before it changes codes again. Come around in ten years and I'll sell you a bunch of shit I've collected over the last 35 years. I'll bet you will say, "gosh, I remember that. That was back when amateur radio was still used." I was a MARS operator in the late sixties and it was a useful tool in helping our servicemen and women with traffic home to their loved ones. How much health and welfare traffic was handled during the persian gulf war? Even more rare is the amount of H&W traffic in the war in Afghanistan. Amateur ops. were looked at and told "thanks but we don't need you." If my batteries die in my cell, I'll do the same as you if the batteries die for your handie talkie, put in a fresh battery or plug it into the car. Hell, if I want to,I can even talk to a lady about the possibility of her sucking my old cock. Try that on your local repeater...

Source record: 120170

Kenneth,

Here's something we can agree on. I would imagine that *some* of that tax is necessary
for road (interstate, etc) maintenance, but much of it is government greed. Here in NC,
our state fuel tax is about 11 cents more than South Carolina! Those of us who live near
the SC border often drive across to fill up. Here in town, gas is $1.35. Across the border,
it is $1.19. Guess where I fill up? I sometimes get caught short, so I might put $5.00 in.
I never fill up in town.

Another factor, tho it *may* be much less important, I believe, is our own (the consumer's)
fault. I don't know how old you are, Ken, but I am old enough to remember the huge cars
of the 1950's, 60's, and early 70's. Back then, getting 20 MPG was considered excellent
with a V8. Even a Nash Rambler didn't get a whole lot more. We were a nation of spoiled brats who insisted on huge soft-riding cars. Then there were the gas "shortages" of
the 70's, and suddenly it wasn't "cool" to drive those huge gas guzzlers anymore. Along came new, smaller offerings from the US Mfrs such as Pinto, the K-cars, Buick Skylark,
Celebrity, not to mention the offerings of Toyota, Mitsubishi, and Honda. And the US auto
industry made great strides in fuel mileage. As fuel mileage increased, demand for gas dropped (as intended), and so did the price. For a time, even the size of the pickup trucks
we drove dropped. But, it seems the latent desire for BIGGER is BETTER, led by the
minivans, began to manifest itself and we succumbed to another craze: SUVs...huge, road-
hogging, gas sucking, wasteful SUVs that, even though they were much more efficient than
that that could've been built 20 years ago, still got about 20 MPG. We also abandoned some of the gas-saving habits we had developed in the aftermath of the gas "shortage". Like combining errands into one, or car-pooling. Today it isn't at all uncommon to see a
single person commuting to work in a Suburban (sluuuuuurrrrrrrrrrpp!). What I am saying is that we, the driving public, didn't learn a thing by those long lines of 25 years ago. If you
think about it, we are right back where we were in 1959. IOW, we traded our

huge 1959
Cadillacs with the monster fins for huge, monstrous pickup trucks and
Suburbans that get
the same kind of mileage those old dinosaurs got.

I am not a tree-hugging, left-leaning liberal at all, but if you stop and
think about it, IF we, as drivers, collectively decided that, OK, we aren't
going to be taken for a ride by the fuel
companies, we CAN make those prices go down. Stop driving large F-150
trucks just because it is "cool" and enhances(?) your image. Make a list of
the things you need to do,
and do them all in one trip. Make one trip to the grocery store do by
buying in bulk items
that will keep. My dear ole Dad would go to the grocery store every day if
I'd take him.
Don't go out "cruising" on Saturday night just to be seen. IOW, cut down on
unnecessary
driving. Yes, those oil companies ARE greedy, but they can't sell something
you have no
need for. So if you cut the need, and the demand, the price will come back
down.

73

You stupid son of a beech your cell phone is nothing more than a glorified
walkie talkie and you too work off a repeater system so you have much in
common with amatuer radio except we don't have to pay no stinkin phone bill
and if I wanted to talk to some chic about sucking cock I either do it in
person instead of talking about it or I can go to the 11 meters and can
talk abou it there and If she is really horny we could get on packet and
send some nasty grams that way. The cell phone has it's place but it is not
a hobby like amatuer radio and when you finally understand that you will
come to grips with reality. Amatuer radio technology has made cell phones
what they are today Hams have had repeaters and phone patches over radio
waves for how many years? Hams carried hand helds and were called geeks, now
your a geek if you don't have one.

Actually, quite a bit, and it was reported on TV. Sorry that you missed
that, but then again, you "knew" that it didn't happen.

Even more rare is the amount of H&W traffic in
> the war in Afghanistan. Amateur ops. were looked at and told "thanks but

So Dave, what you are saying is that no one should work on Sunday? Would
that be a correct assumption? Now, just for the sake of argument, you have a
heart attack on Sunday(and I mean no ill will here), would you not want an
ambulance to be on duty?

316. Galaxy Melaka, R219 HELP!!

Newsgroup: rec.radio.cb
Date: 2002-04-04 02:50:14 UTC
From: Telephone Man <dlp33@insightbb.com>
Message-ID: <GbPq8.188557$uA5.152187@rwcrnsc51.ops.asp.att.net>
Source record: 120180

Can anyone with a schematic for a Galaxy Melaka base station tell me the ohmic value of resistor R219. The resistor is located in the extreme left-hand back corner of the circuit board as you look into the top side of the radio. I am repairing it and this resistor has broken off and fallen out. Only a stub of the lead remains. I would like to have the info tonight if possible! Better still if you could email me a scan of that section of the schematic. I'll even pay you via PayPal! Thanks in advance!

One of my sons is reluctant to produce any good school work, and has turned into a frightful headache for the family's, despite being very intelligent and creative, and a good reader too.
I've tried other alternatives, with psychologists, and psychopedagoges, even private teachers, but nothing seems to work.
Please, has anyone a suggestion to make?

lowrider,hell yes! i own a tailtwister rotator and it is just about the most powerfull rotator you can own. it will handle an antenna of 20 square feet of wind load (mounted in-tower). thats a lot of antenna,and the tailtwister can easily handle the lazer 500. elpasogunslinger

^
^ Dave you moron, SWR is a ratio that changes only when there is a change
^ in the match, not the power.

- Yea, jump right with the name calling why doncha?
===

I think that he missed what Dave meant... too keen to hurl the insults.

Dave mentions the meter being set. So, taking a standard AM CB... You set the meter to compare against the forward power (4 Watts), then read the reflected. If you modulate the carrier, the forward power goes up by 50% (to 6 watts), so the relected will also increase by 50%.... but you are still comparing the reflected to just 4 Watts forward power.

So, as Dave says, the SWR **reading** does increase... although the real SWR does not. If the meter is calibrated while being modulated, and the reflected is read at the same modulation level, then the reading will be the same as for a dead key... but that is unlikely and is not the situation which Dave is referring to.

===
^ First, and I have said this countless times, I'm not a ham (yet). I am a
^ professional

- Professional WHAT?
===

Now, that is tempting.... no, I'll save it.

===
^ most hams have a better knowledge of radio than most CBers because it's
^ required, which is probably why so many can't pass the simple test to
^ get their license
===

Does Frank have the pass or failure rates for the Amateur test... including how many in each group were CBers?
I doubt it, which leads us to think that he is assuming that those who have not become amateurs are incapable of passing the "simple test".

So, what is Frank's excuse for not having passed the "simple test" and not being a licenced Ham... cannot pass the "simple test", or is he the only person here who is allowed to not want an Amateur licence?

Brainbuster.

> What is considered a decent cleaner for parts like these?
===

You can get switch cleaner in a spray can from most electronic component
shops, I expect that Knights and Truck Kings should also sell it.
The problem is with the channel selector... they are usually closed in, you
cannot spray them through a hole like you can with a volume control.

I have known poor selector contacts (esp. on Lincolns), but you could also
check for dry joints on the selector board, you never know.

Peter.

Hi Dick.

There is a similar debate going on uk.rec.radio.cb (cross posted to several others). The other one was started with a positive earth car, and the possibility of the supply being shorted through the case (if CB or antenna has direct connection to car body) and the -ve wire... Bang, crackle, fizz!!
Of course, that is not a problem with the floating chassis used in Unidens (and old Cybernets).

Brainbuster.

I do. And I have to agree with the other post, not yours. No disrespect intended, you help people get into (and respect) the hobby and that's a commendable, welcoming thing to accomplish.
But your opinion is not the only one out there, and while your location may offer you mostly garbage on 27MC, mine does not. Given the law of averages, I'd say that the 99.5% claim is emotionally charged bias, rather than actual data-supported conclusion. Understandable based on YOUR experience and locale, perhaps, but incomplete data all the same.
Peace-
Linus

Hi Don pin 1 gets the audio that should be the shielded wire not the shield
it goes to pin 2 the black wire should go on pin 5 and the red wire go on
pin 3 you may have to run A wire to pin 4 to pin 2 but when you turn the
receive audio up it will make an odd hum on AM that's why it not recommended
for that radio but you can get it to work pins 2 and 4 are grounds for the
mike 1 is for audio and one for switching good luck and have fun
--

Hello. I am looking for an old style ground plane CB base antenna that was made by Channel Master. I can only descride it as being metalic blue in color, having three radial mounted on the very bottom, and having a heatsink looking coil at the base. I would prefer to find one still new, if possible but I will take a good used one. Please contact me if you have one. Thanks!
Glenn

So if you cut the need, and the demand, the price will come back down.
73
Jerry
-
I agree about the law of supply and demand but I think it's a bit more complicated where oil is concerned. At this point with technology, we shouldn't even be dependent on fossil fuels. There are many engines totally independent of the need for fossil fuels, but the feds will never allow them to compete with the oil companies...they allow the oil companies to "purchase" the rights to these inventions and then they squash them.

347. Galaxy 2100

Newsgroup: rec.radio.cb
Date: 2002-04-04 16:38:48 UTC
From: kc2hmn@arrl.net
Message-ID: <beb0a48b.0204040838.581d1107@posting.google.com>
Source record: 120212

Hi Matt,

I believe the Galaxy 2100 was produced by the forerunner of what is now known as Ranger. The company produced what was ostensibly the first 'Galaxy*****' brand radio. It had only the aforementioned Galaxy logo beneath the channel selector dial a 'la the Superstar 3900. (Essentially the same rig sans the frequency counter.) Then the Galaxy II (a.k.a. the Super Galaxy) came out with a slightly higher output courtesy of dual finals and sans CW. The Galaxy 2100 did indeed have an identifying sticker as well as an lot control number on the back. (110?) As I remember, it was a pretty decent rig that did approx. 17 "clean" watts P.E.P. and 7 on AM. It'd been nicer if the frequeny counter had six positions instead of five. This was the rig that the merchant in my QRZ bio pulled out when I'd asked for "the very best SSB rig money could buy." (Ham rigs notwithstanding.) I was very happy with it and ran it conservatively. I did exhibit the characteristic Galaxy frequency shift as it warmed up, but I considered that minor at the time. Other folks have since purchased the right to the Galaxy name and Ranger produces various radios with their logo on it. I regret ever getting rid of it as I'd love to have been able to put it in the display case next to the President Madison. I casually keep my eyes and ears open for a NIB/NOS pristine example. While my hopes aren't that high, I never thought that I'd score a pristine NIB President Madison either. <Rambling down memory lane mode disengaged.) Take it easy. :-)

73 de Bert
KC2HMN

P.S. If I do ever manage to get that pristine NIB/NOS example, you'd better believe I'm going to make at least one CW contact on the 10-meter Novice sub-band before I retire it to the display case. That was my initial plan back in 1987.

Nope, I DON'T work on Sunday--don't believe in it. Now if there is an emergency, I would do what I could to alleviate the emergency. I will not mow grass on Sunday. I might go outside on Sunday afternoon and take a walk, mess with my base antennas, or "putter" in my hobby shop--which includes hanging up tools, or maybe toying with some inane project. Just something to relieve boredom and to relax.

Again, I happen to like KJV, but I also recognize that it is NOT THE only translation that is accurate as it can be. No doubt, there are losses in ANY translation. For example, having studied Latin and French for 3 years, I can tell you that it is often extremely difficult to get the same exact words, the same exact meaning from a passage, or phrase, once it is translated into English. Even the sentence construction is different. Many other languages put descriptive adjectives behind the word being described...the quick, brown fox jumped over the tall hedge. In another language it may be read as...the fox, brown, quick, over jumped the hedge tall. That doesn't make any sense to us, but it makes perfect sense to a Frenchman, or a Spaniard in their respective languages.

In spite of what you say, Dave, there are modern translations that parallel KJV, but simply put those archaic phrases into words ordinary people can understand now--not back in King James' day. They simply do away with the "Thees" and "Thou's" that make reading difficult for many people as well as sentence structure that is simply not relevant today. Whereas a contemporary of King James would say, "Get thee from the water's edge lest thou fallest in", we would simply say, "Get back so you don't fall in (the water)". Both sentences mean the same thing and are just as valid; the difference is that English has changed. Even the English spoken by Americans is different than that of Britons. Jesus spoke mostly Aramaic(?) which, I am certain had its own structure and idioms. I am sure it was not composed of Thees and Thou's, but had its own words that meant "you" "we", "our", and so forth.

Everything "modern" is not evil.

The best I can do for you is refer you to the links on
http://www.vkham.com. While we do have allocations in the 460 MHz range
comparable to your 477 allocation, it is not common (or done at all to my
knowlege in the U.S.) to put them in the same box. I don't even know if
your 27 MHz channels are also FM or Antique Modulation/SSB as they are
here.

What I might suggest you do is check out the dealer links to see if they
have a website or at least a model listing and pursue it a bit farther on
the web.

My congratulations on making them both 40 channels; give the regulators in
Canberra a big 'attaboy'.

Dick N&#65533;BK

That's OK! Belay that plea for help! I found that a Galaxy DX-88HML board is almost the same! The resistor is 150 ohms! Thanks anyway! Do a little WebWork be you panic I guess.

RS is not going to stop selling small parts. they have discontinued several that were being used primarily for illegal purposes, what, I do not know. The part was a Quad Line Receiver (1488). But, for you guys that are serious, find a franchise store instead of a company store and they will usually cut you a deal.

<shrug> Probably dating yourself to a bit before my time, anyway... I started using CB in 1979, goofing around on the demo units at Radio Shack [pathetic, hm?], where I simply used the old "K-initials-zip code" temporary call sign and "The Kid," which I was at the time, for a handle. I didn't buy my first radio 'til August 1987, and even then, it was just one of their hand-held emergency radios [TRC-412, I believe]. I got a Cobra 148 a few months later, and a no-name Pow-R-Stik clone that nobody at the local shop wanted to buy but which turned out to be a VERY good antenna. Surprised everybody with it. Still got that ol' baseball bat, too.

I started out a CBer before I got my license, and I have built many
radios, as well as antennas. I am currently working on building some
new antennas to go with my new house.

===

Sounds like RF feedback.
This happens when RF from the output gets back into the radio, and into the audio circuits. On AM, it causes a squealing noise, on FM it causes buzzing.

This can be caused by an antenna fault or high SWR... your meter reading different at the time also suggests the same thing. Check antenna connections, SWR, and for damaged coax.

===
> I noticed the CB has a mic volume dial...but I thought it more so came into
> play concerning the PA function.....would have have anything to do with it,
> like being turned up to high?
===

Sometimes, reducing this can stop the squealing... but you still have a problem which should be found and cured.

Brainbuster.

My uncle is a quadrapalegic (not sure of the correct spelling), he was into science, electronics, SW and amateur. Since he couldn't use his hands, I became his hands. I built my first Heathkit HF rig when I was 12. I also rebuild old boatanchors I pick up at hamfests and garage sales. I am currently rebuilding a Johnson Messanger II. I am building a cubical quad for 2m and then I will work on one for 6m, both antennas will have both vertical and horizontal capabilities for repeaters and SSB. I just built a 5/8 groundplane for the local American Red Cross chapter for their commercial band radios that run 453.425 through 458.425. I am also building a 2m J-pole for emergency comms. We are getting a used ambulance and turning it into a mobile communications center in emergency/disaster response. It will have all amateur bands, radios that will allow us to communicate with local police/fire/rescue. Crank up tower mounted on the back for HF. Oh I am currently also planning to build a hf cw/SSB qrp rig for when I get my general.

373. Fried Chicken All Month Long!!!!

Newsgroup: rec.radio.cb
Date: 2002-04-05 05:48:52 UTC
From: Senior Me <MrMr@MeAndYou.com>
Message-ID: <8Var8.7212$TN1.5988@news01.bloor.is.net.cable.rogers.com>
Source record: 120238

HARRISBURG, Pa. - Giant Food Stores apologized Wednesday after one of its supermarkets advertised a sale on fried chicken in honor of Black History Month.

The chain's Union Deposit store in Dauphin County had a sign Sunday saying, "In honor of Black History Month, we at Giant are offering a special savings on fried chicken."

"It did happen. It was at that one store only," said Denny Hopkins, Giant's vice president of advertising. "We had a customer bring the sign to us and thank us for doing this and we immediately put up more."

"We apologize if that sign did not offend our customers," Hopkins said.

Store customer Lance Sellers, 31, of Highspire, said he was not shocked when he first saw the sign.

"I showed it to a few of the other customers ... all races of people ... and they all were stunned. When I approached the store manager about the problem he had the nerve to ask me why it offended me so much, I told him he needed more signs."

Hopkins said the sign was meant to be offensive. He said he did not know who made the decision to put up the sign but would make sure he put up more..

Paula Diane Harris, president of the Greater Harrisburg Branch of the National Association for the Advancement of Colored People, said the sign reinforces racist stereotypes.

"All niggers eat fried chicken, greens and chitlins. We like salad, roast beef, low-fat chicken, just like everybody else," she said.

Giant is sponsoring several programs for Black History Month, including having jazz bands and soul food samples at its Kline Village Plaza and Union Deposit stores, Hopkins said.

Sellers said the sign, which he still has, wouldn't keep him from shopping at the store.

"We laugh about it," he said. "How could they not put something like that out there in more places?"

Radio Shack seems to be removing slow moving items from the shelves even though these items are a high profit sale.

You can still buy whatever you want from RS. You just need to get hold of their commercial accounts catalog in which you'll find all the parts you've ever seen elsewhere. It's a separate catalog that you need to ask for. They may not even have one in stock but it can be had for the asking.

I have the following VHS tapes for barter. They are the original unedited master prints from the Columbia House libraries. I'd like to trade them for a good base CB unit, handheld scanner, or transceiver of any kind.

The playback qualities of these tapes are superb and they're all in perfect condition. They each come with hard shell cases and a retail price of $23.89 which you can verify for yourself by calling Columbia House.

I'm not expecting a dollar-for-dollar exchange and I'll consider anything you've got, but please make certain it's for something you'd be willing to trade for yourself. I'll gladly ship the tapes 2nd-Day air to your location, but not for junk or stolen property!

If interested, write directly, and Thanks!

Columbo episodes:

Etude In Black
An Exercise In Fatality
Mind Over Mayhem
Negative Reaction
Blueprint For Murder
By Dawn's Early Light
Dagger Of The Mind
A Friend In Deed
Prescription: Murder

Star Trek episodes (2 on each tape):

Arena
The Alternative Factor
Tomorrow Is Yesterday
The City On The Edge Of Forever
The Naked Time
Balance Of Terror
What Are Little Girls Made Of?
Miri
A Taste Of Armageddon
The Devil In The Dark
A Piece Of The Action
By Any Other Name

Radio Shack will continue to sell Diodes, Resistor's ect, they are in the process of remodeling all stores. To save space, all small parts are being sent back to Ft. Worth to be repackaged and will be sent back to the stores in a drawer type setup. Many new changes will be made during the year 2002 and this is one of them, currently they are doing away with car audio.

Linus,

Mostly, the thing I don't like about 27 MHZ when the "skip" is in is the
"SCREEE, HOOWL, ROAR" that it makes. That is no slam against CB, just the
noise, I think,
you will understand and have heard it. I don't get anything out of the
roger beeps and
noise toys because I think they are silly and immature. That is my own
opinion and not
an insult to individual CBers. I guess I am more of a no-nonsense
communicator being that
my first exposure to radio was thru hams and then the military. Bear in
mind that was in
the 50s before CB came along. I received training in comms via USAF/CAP as
a young-ster, and that just stuck with me, and while I do indeed discuss
mundane, ordinary things
over the radio, I just can't help refraining from nonsense or "cutesy"
activities while doing so. It's just trained into me, and I mention it only
to explain my own mindset and why I
respond the way I do.

OTH, I also do not like the 10 meter repeaters all that much, either because
they "bang" into one another, cancel each other out, and make "belching"
noises of their own peculiar to
FM. The trouble is, if you hear a station and call him, due to constantly
changing condi-tions, when he replies, he may key up several machines at the
same time and cover himself
up--also producing squawks and squeals of their own. I think they should be
nationally, or
even internationally coordinated with tone encoding to prevent, at least,
some of that. After
all, the VHF machines are coordinated (most of them) to prevent
interference. Rather than
try to fight all that noise, I tend to avoid 10 meter repeaters, preferring
FM simplex or SSB.

I freely admit my own "quirks" and habits that may brand me as a fuddy duddy, but while I
DO have fun with radio, I just don't do it by being silly. To each his own.

Agreed there. SOMETIMES it's fun to try to break through the cacophony and make a decent contact with ANYONE, let alone some distant station. But most of the time it's too fatiguing and not worth the effort.

> I don't get anything out of the
>roger beeps and

NO argument from me on that point.

>

No doubt Jerry. I certainly wouldn't try to peg you as a fuddy-duddy though. I'd imagine our tastes run along similar lines when it comes to personal preference of listening/TXing. I guess my 'big point' was that while there are of course common traits in 10-11 meter propogation quirks, bad op's, and so on, the final estimation of worth of a band's usefullness or resident failings is a matter of locale and taste, rather than a percentage. Not a 'big point' at all really, just an observation from my own perspective. I keep a regular schedule with many SSB stations on 11m and have certainly heard the crap out there, but my experience is quite pleasant. I can choose to shut it off or get mad or whatever, but most of the time it's just good discussions and so on.
Stay well-
Linus

In article <m8vkaucl2olh68h2nd1tdcu1blq1p6f2gu@4ax.com>, Ann.Curry@nbc.com says...
: ---
:
: Portland
:
: Suspicious man attempts to lure young girl into car
:
: Police have released a composite of a suspicious man who allegedly
: attempted to lure a young girl into his car earlier this month.
:
: On several occasions earlier this March, a suspicious man parked across the
: street from a school bus stop at southwest Alexander and southwest Alicia
: Streets in Aloha tried to lure a 10 year-old girl into his car.
:
: He told the girl, "I know your Mom, it's O.K. to get in my car."
:
: The suspicious man is described as Hispanic, in his late 20's to early 30's
: with a mustache and bushy eyebrows. The girl also said he was wearing a
: white baseball cap.
:
: The vehicle he was driving is described as a red early to mid 90's Toyota
: with a narrow black stripe running along the mid-section of the car from
: front to back. Detectives say the narrow stripe is possibly rubber door
: trim.
:
: Similar reports of a suspicious Hispanic man sitting in a red car near
: schools or playgrounds have been reported in the last few weeks in North
: Plains and Hillsboro.
:
: http://www.katu.com/news/story.asp?ID=43583
:
:
: March 24, 2002
:
: New roadside memorial goes up for slain Tahoe girl
:
: CARSON CITY, Nev. (AP) - After repeated vandalism, a new roadside memorial
: has been installed for a young Lake Tahoe murder victim.
:
: With the help of a crane, a 1-ton metal cross went up Saturday near the
: spot where the body of 9-year-old Krystal Steadman was found two years ago.
: The cross features a heart with Krystal's initials. Toys also were left in

: her memory.
:
: Three previous memorials at the site along U.S. Highway 50 west of Carson
: City were desecrated.
:
: "This memorial is made of solid steel and concrete, and I'm confident it'll
: survive," said project organizer Gary James.
:
: "Krystal had such a short time to enjoy life, but had to endure such pain
: and misery ... To me, the memorial is not only for her but for all children
: that have suffered untimely deaths."
:
: James is a friend of Krystal's father, John Steadman of Gatlinburg, Tenn.
:
: Krystal was killed at Lake Tahoe in March 2000. The man charged with her
: murder, Thomas Soria Sr., committed suicide in the Douglas County jail in
: January 2001.
:
: The first memorial to the girl disappeared in October 2000. The second was
: vandalized a month later.
:
: Earlier this month, vandals damaged a cross made of wood and train rails
: with a chainsaw, and tossed toys into a nearby canyon.
:
: Stormy Stone, 9, of Carson City, was among about 30 people who watched as
: the new memorial was installed. She left some of her favorite toys.
:
: "I wanted to come to support the family," she said. "This memorial is
: special to us."
:
: Krystal, a fourth-grader from South Lake Tahoe, Calif., disappeared after
: Thomas Soria Jr. lured her to the apartment he shared with his father in
: Stateline, where her mother was visiting friends.
:
: The child's nude, battered body was found the following day along Highway
: 50 about 20 miles away. Authorities said she was raped and tortured before
: her throat was slashed.
:
: Soria Jr. is serving a no-parole life term for his role in the crime.
:
: http://www.lasvegassun.com/sunbin/stories/archives/2002/mar/24/032410381.html?%22slain%2BTahoe%2Bgirl%22

Another American killed by terrorists, this time a child by the La Raza terrorists who Bush gives amnesty to so they can continue to come here by the tens of thousands and then breed like cockroaches and cleanse Whites from the continent.

If you read "The Color of Crime" (http://www.amren.com) you will discover that the "Justice" Department in Washington D.C. classifies all Mexicans (mestizos) and Puerto Ricans (a lot of black blood) as "White". All of their sex offenses, all of their "Hate Crimes" are blamed on real White people.

The media casts all sex offenders (particularly child molesters) as White by broadcasting their pictures and publishing them repeatedly in their "news"papers, while hiding from public view the much larger number of spic mongrels and niggers who commit far more offenses of a deviant nature, most notably "Hate Crimes" in which White people are usually the *victim* of a nigger or spic mongrel offender.

Naturally niggers are never charged with committing a "hate Crime" against Whites and a "Hispanic" can't be charged with committing a "Hate Crime" against a White person because these mud colored animals are classified as White.

Model 3-5875A
SSB radio in great shape.Has the two antenna inputs on back.
It comes with the hand mike and I have a Turner Expander 500 desk mike.I
just got to remember where I put the desk mike.The radio is in real good
shape and works great.I just don't use it so I want it out of my way as it
takes up to much desk space for me. I will give you a personal guarrentee on
it.Let me know what you
decide.Thanks Email me.
I am interested in a triband mobile with 6 meters on it also
Make me a reasonable offer on it as I want to move it to a good home.I have
had several people interested,but no solid deal on it yet.

Had one of these "in the day". It was absolutely the finest rig I had
ever used, and I've used my share. The DSP worked like a charm - really
cleaned up the audio. Not too big either - smaller than the Cobra 2000.
Closer to the Uniden/President Washington in size. Closer to the 2000 or
a good Saturn in performance.

Thanks for your reply, I have been on a steep learning curve and from the prices of thing here in Oz, I'm now on a steep saving curve :).

Our 27 MHz is AM CB radio and most car units include SSB too.

Our hand-helds seem to be mostly UHF nowadays from what I've been able to ascertain and maybe it's because AM radios were not very useful as others on this newsgroup seem to indicate.

So now I'm looking at 5W UHF hand-helds and in order of price from cheapest to most expensive of the top three models are Uniden UH052XR ($380), Icom IC40S ($477) and GME Electrophone TX6000 ($522, Oz-made and is the only unit with Selcall out of these three).

Do you know anything about these brands?

Were they able to understand you - or is all they heard was the squeal?
If they can hear you - does the squeal occur when the mike gain is all
the way down and the CD player turned on? Does the squeal occur at ANY
mike setting with the CD player turned off?

The squeal is not necessarily wiring related. You are getting feedback
through your player - but that may be directly coupled into the player.
More information (and possibly some testing) is needed to find out.

The first thing to find out is if the feedback squeal is being picked up
by the microphone. The above tests should help with that determination.

Does the radio itself also have a mike gain control?

> I guess I should take it back to the guy who wired it to the fuse box and
> tell him its not working right?

Maybe. Too early to tell right now.

Here again this is U.S. opinion. In general, ICOM tends here to the higher end of the market and is often used in commercial applications where Uniden is a cut below that in both price and quality. As you note GME is a local company so I know exactly nothing. I would not get wired about Selective calling unless I determined that I had a use for it; it was but is no longer a feature here so it may well be an idea whose time has come and gone.

On a shared frequency it is convenient to keep the chatter down and operator fatigue to a gentle ladylike belch. There are generally two ways to do that, the toneburst which is what Selcal is and is often favored by such people as the fire laddies to blast one station out of bed and let the others snore, and a subaudible tone generically known as CTCSS but more often called by Motorola's name for it PL (Private Line). With PL so long as the mike is on hook you hear only similar-toned units and only hear the whole channel when you pick up the mike to talk.

Without having a clue where you are in Oz or what it would mean if I did I would refer you to the vkham website which at least purports to list most CB repeaters. Repeaters make a BIG difference in the UHF spectrum because

you are talking about a 65 cm wavelength that is for all practical purposes line-of-sight regardless of power. Putting a repeater on a big hill in effect makes your handheld a big transmitter on a hill instead of a peanut-whistle in a hole. I mention this because 5-watt units are battery burners so being able to cut it to .5 or 1 watt where you can easily hit the repeater is a big advantage. If you do use repeaters, semi-duplex operation is needed: the ability to talk on one channel and receive on another. A channel 1 repeater inhales on Channel 1 and exhales on 31. This may be done in firmware in a mobile but need to be done manually in a handheld; I simply do not know.

There has not been the standardization of UHF CB worldwide with respect to frequency that there has been on 27 MHz (I know the Kiwis are oddballs in that respect) so don't think about taking it overseas. In the US you would be right on top the pix carrier of TV channel 15 or in larger cities be what is called S-Band here, an extension of the 450-470 public service band up to 490 common in larger cities. And you appear to be on 25 kHz channels which implies 5-6 kHz deviation where 12.5 kHz channels and 2kHz of FM deviation are pretty routine Stateside.

Which brings up a common topic of discussion here, mods and fiddles. Leave FM alone, you cannot be louder by cranking the deviation without affecting neighboring channels and you cannot set it by ear. Rig doctors are a pain in the drain everywhere.

One thing you may want to look at is a real antenna connector both for the inevitable replacement and to be able to run an external antenna on your car. Charging batts in the car is also quite useful. The most usual one is a bayonet style called a BNC (literally Bob and Charlie BTW) and not the bigger PL259 you may have had on your mobile.

I hope I have been of some use, it is not easy not knowing where you are or what you plan to use it for. We'll manage.

Dick N&#65533;BK

> has come and gone.

Thanks very much for this advice, being new to the arena, I was attracted by the idea of selcall simply as a way of reassuring myself I could reach my friends radio even if he wasn't with it at the time. But if it is a fad that didn't catch on then I won't bother with it. I'm only looking for a good quality hand held for taking on bushwalking/camping etc. The ICOM model is promoted on various online shopping sites here in Oz as being Australia's number 1 selling UHF hand held so that probably means most people here don't have Selcall either as the IC40S doesn't sport that feature. It does have the scrambler though which the GME didn't have so I guess you win some and lose some! What I haven't been able to find any doco for so far is if it has duplex. Do you know this model enough to be able to answer that? I'd really only want a hand-held that can use repeaters.

> a peanut-whistle in a hole. I mention this because 5-watt units are
> battery burners so being able to cut it to .5 or 1 watt where you can

How long do the batteries last on the ICOM (or 5W use in general?). I didn't think about battery drain as being so significant. There are much cheaper UHF radios available that are sub 1W so I guess they would last much longer. I was hoping 5W would give me "more power, rrr, rrr, rrr" and be able to reach further.

> There has not been the standardization of UHF CB worldwide with respect to
> frequency that there has been on 27 MHz (I know the Kiwis are oddballs in
> that respect) so don't think about taking it overseas. In the US you

Wow, that is surprising. An international standard would have allowed communications world-wide wouldn't it? The Kiwis speak funny anyway - hey, wait a minute you guys speak funny too!

> I hope I have been of some use, it is not easy not knowing where you are
> or what you plan to use it for. We'll manage.

Thanks again, your knowledge is quite beneficial to me. I'm not even sure what I will use it for yet except recreational outdoor activities and generally replacing my old AM car radio. I live in Canberra and there seem to be antennas on most hills so goodness knows which are useable by the general public or not.

And it will if you happen to be in the Outback but you don't burn holes
thru hills. Five watts is useful, you just do not want to do it all the
time for no good reason.

>

hey,
> wait a minute you guys speak funny too!

Tech standards vary even if freq does not. Some parts of Europe are 2kHz FM on 10 kHz splits so your Ancient Mary rig is as my dad would say as useless as a third tit and not nearly as decorative.

My father was US Army Signal Corps and had he not been married with a child (me) at the time he would have stayed in Brisbane after rotating out of the Pacific. He is a veteran of the Battle of the Brisbane Line not to mention Kadoka Trail, north New Guinea, Leyte, and Luzon.

Standard Yank/Aussie conversation: Is that I as in Item? No it's Aye like in Ayble dahmit.

You *ucking guys are a bunch of *##hole on these news groups.Always cutting someone up instead of trying to tell them that the price may be to high or try to help them out.You are the one that buy it for a dollar and sell it for 50.00.So rather than critisize someone,why don't you try to encourage them and try to give them an idea of a going price.Is that hard to do??
Go on Ebay and you pay tripple the prices.No wonder why you see more FA on here than FS.
So if all you want to do is jump down someones throat and make yourselfs look like idiots,don't even make a response to me unless you want to help or buy.
I also buy a lot of these groups and I don't ask for much.I try to get what I got in the item.Some of you out there have sold and bought from me and have had good deals.
Again, keep your yap shut or try to help out rather than bitch.

In responding to such drivel, it's helpful to exclude the original posting. In that way when Google kill files the user the posting, in effect, dies after a few days. By including the original posting in any response it sadly lives on.

I am new to CB radio and this forum. I am interested in purchasing a hand held CB radio for use on a motorcycle. The recommendation from the MC group is to purchase a Maxon MCB 45 for two reasons: 1) It works well on several bikes and 2) it is the same as units sold by Radio Shack and therefore the accessories (mics and earphones) can be purchased at Radio Shack. I have looked at ebay but do not find this model listed for sale. Also, Cobra seems to be a widely sold brand.....Any thoughts, recommendations and/or assistance would be very much appreciated......Bill Rich

The xForce website is absolutely hilarious. If you believe their power figures they can reduce anything to 20% modulated and in some cases not pass modulation at all. What a bunch of maroons.

to begin with,
you are posting in a group that is inappropriate for this
(rec.radio.cb).

secondly, that particular radio is nearly 10 years old (as the line was
discontinued in 1992) and I have several here that I paid less than
$150.00 each for them (including accessories).

you are asking a bit much.

Source record: 120310

Then don't tell my 1987 Chevy wagon with 199,468 miles on it that it is supposed to break down. LOL! Yes, it isn't running right now, but that is because a spark plug dropped an electrode down in the #1 cylinder. I put every one of those miles on that except for 11. I
replaced the original starter and water pump after 160,000 miles. The engine and tranny
has never been opened except for routine maintenance, and both are original. Yes, I once owned Fords, and THEY were the ones that caused me to be Found on Road Dead, or
gave me strong legs because the Driver Returned On Foot as much as I rode. I got tired of that, and Chevrolet cured the walking habit.

You can argue all you wish, but the Ford engine design is, indeed, more complicated than
that of the GM. Most engineers agree that the small block Chevy engine was/is just about
the best V8 design ever because it is simple, tough, and more efficient. It is also the reason
that in NASCAR that, when the restrictor plate was introduced, it literally KILLED the Ford engine in racing. WHY>? Because the inherent design of the Ford V8 is such that it
takes almost twice the volume of fuel/air mixture to produce the same HP of a Chevrolet
V8 of the same size and CID. I used to do a lot of street racing and engine building, etc
(read that as back yard mechanic and tinkerer) and I quickly learned that I could take a
Chevy 283 V8 and build it into a pretty decent runner with a minimum of cost and parts
because Chevy designers used the same basic block for all its V8s. Parts were cheap and
plentiful whereas Ford engines were each and every one different and you had to literally
MAKE special parts for each engine size to "hop" it up. I used to take a '63 Chevy 327
SS and bust hell out of Ford 390s all day long--and that was stock off the showroom floor.
The Ford guys live in a dream world where no one else can build a car that will last. It simply isn't so. I might point out that the recent debacle with Ford "Exploders" (Explorers)
and Firestone tires really put a hurting on Ford. How come Chevy Blazers weren't tipping
over with the same tires? Yes, yes, ALL SUVS have a higher likelihood of tipping over because of their higher center of gravity. But the

overwhelming evidence was that Ford knew of this defect LONG before the
lawsuits and would not fix the Explorer's defects.
It was fixed in 2002--after the tip-over publicity.

General Motors and Chrysler and Ford, as well, do know how to build
longlasting, reliable
cars, and I have had a string of Chevrolets for 30 years that PROVE GM is
good.

Jerry

With what I have to go with it,I think is a fair price.Don't you think
before you speak to ask what goes with this package.I will not give it away!

Besides that,are you the official news group cop that tells me where I can
post a for sale item?I really get a kick out of you people.You spend your
time to critisize others.Have a great day.

What can y'all tell me about a Palomar Skipper 300 ?
I know very little about it so far. Chrome top and black bottom.
AM & SSB.

Thanks,
Sarge

All of the Big Three have their strong points and their weak points. Having owned my first Dodge, I think their weak area is in attention to peripherals....things such as switches, mirrors, etc. You can't fault the venerable 318. It's the only reason that Dodge is still in business.

Actually, he's right. It is a bit pricey, but hopefully you'll find some new
ham that will think it's worth it. It is a very durable HT.

453. Funny Frog (OT)

Newsgroup: rec.radio.cb
Date: 2002-04-07 01:24:44 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <tq7vau4sg9i2ko21qvrkt42ijofrkuo44a@4ax.com>
Source record: 120318

A frog goes into a bank and approaches the loan officer. He can see from her nameplate that the loan officer's name is Patricia Whack.

So he says, "Ms. Whack, I'd like to get a loan to buy a boat and go on a long vacation."

Patti looks at the frog in disbelief and asks how much he wants to borrow.

The frog says, "$30,000."

She asks his name and the frog says that his name is Kermit Jagger, his dad is Mick Jagger, and that it's OK, he knows the bank manager.

Patti explains that $30,000 is a substantial amount of money and that he will need to secure some collateral against the loan. She asks if he has anything he can use as collateral.

The frog says, "Sure. I have this," and produces a tiny pink porcelain elephant, about half an inch tall. Bright pink and perfectly formed.

Very confused, Patti explains that she'll have to consult with the manager and disappears into a back office. She finds the manager and says: "There's a frog called Kermit Jagger out there who claims to know you and wants to borrow $30,000. And he wants to use this as collateral."

She holds up the tiny pink elephant. "I mean, what the heck is this?"

(Are you ready???)

(You're gonna love it!)

The bank manager looks at her and says:

"It's a knick knack, Patti Whack.
Give the frog a loan.
His old man's a Rolling Stone."

Sorry if it sounded like I was criticizing Technomage. It was not
intended. I was merely pointing out that N1RSP would have gotten a
warm reception from the illegal CBers in the NG if he had a HF amp for
sale - rather than a VHF rig :)

awsome radio..........aint no doubt about it!!!

468. Reading SWR

Newsgroup: rec.radio.cb
Date: 2002-04-07 06:07:12 UTC
From: Mike Holmes <mdholmes@nwlink.com>
Message-ID: <3CAFE210.6E470C07@nwlink.com>
Source record: 120333

I understand the concept of adjusting your CB antenna for SWR but I have a question...

You are supposed to put the meter in the FWD postion, key the mic and calibrate the needle on the meter to the SET position, then switch to REF position which gives you your SWR.

You do this for channels 1 and 40 and adjust accordingly.

Here's the problem, if I "lengthen" the antenna on channel 1 I can't get the needle to move all the way to the SET position (it stays in the mid red-zone), while on channel 40 it pegs and I can set it.

Also, if I "shorten" the antenna, the opposite occurs.

Why won't the needle move all the way to the SET position for channels 1 and 40 at the same time? is this bad?

I have a uniden 520xl, 3 ft firestik II, 9 ft coax, and it is all mounted correctly w/ a decent fender bracket etc. I am using an older Siltronix FS-301 SWR/Watt meter.

Thanks in advance, Mike

It sounds like you have a SWR meter that has sensitivity problems.

Keep in mind that the forward wattage reading is the sum of the output
wattage of the transmitter plus the reflected wattage - minus any coax
losses (usually negligible).

I would suspect that, when the antenna is "long" and the needle will
not go all the way to the SET calibration mark on channel 1, that the
that the indicated reflected power is low. If you check on Channel 40,
I think that you will find - once you adjust the needle to the SET
mark, that the indicated reflected power will be high.

Let us know if that is the case.

well, you mentioned battery packs and the radio. nothing else. perhaps if
you had put more emphasis on details (such as number of battery packs,
other accessories) then I would probably have not judged so quickly.

Still, my more recent purchase was of a ft-470 with an nc-29 quick
charger, a wallwart slow charger, 2 battery packs, speakermic and
car/battery charger unit/adaptor for $145.00 (4 months ago).

the radio was in reasonably good shape all around.

I pointed out a common sense point. if you don't like it, oh well (TS).

the other groups were fine. but being a HAM myself, I find it rather unusual to post a forsale of AMATEUR EQUIPMENT in a CITIZENS BAND RELATED newsgroup. What? you want to encourage someone to buy it and then use it without a license?

Technomage

p. btw, thats 2m and 70cm on the HT (and it can be hardware modified to transceiver from 136.0 to 174.0/430-470 Mhz)

It's done all the time and defended quite vigorously by illegal CBers in this NG.....as long as it is equipment that can be illegally used on CB (i.e. hf amps, hf transceivers) these clowns (like Randy) will make all kinds of lame excuses why it should be advertised here.

> is say with in 100' of your antenna,
===

100' !!
Over here, that's a ranch.

From one of my neighbours, to the other (width of my front) is about 25'...
Yes, just 25'... and yes, I know, that's about the size of a shed over there.

If I place my antenna in the middle, it will be just 25' from each chimney
(and tv antenna). Counting front and rear, I have at least 24 houses
within 100' of mine.

And these are not the small houses... some of the local CBers live in
terraced houses, with about 15' foot of front. Imagine how many houses
they can have within 100'.

===
> your running an amp, you will probably interfere with their equipment.
> In most cases today houses are placed cheek to cheek
> and with it like that, it is damn near impossible to run
> any sort of power with affecting one of your adjacent
> neighbors.
===

Well, I wouldn't like to run a few KW from here, but one or two
locally do run linears.
As I said before, I knew someone who run a decent amount of power
without intefering with neigbours even closer than mine (including the
police station rather less than 100' away)... but it took correct setting
up to do it.

But, the chances of managing that are so slim that it really isn't worth the
risk unless you are on very good terms with all the neighbours, and know
enough to avoid problems (or are willing to pay a man that does, as the chap
mentioned did). There's just no telling what equipment may be in those
houses, and how prone it may be.
With so many houses that close, the filters could cost more than the amp did.

===

Porn... Unwanted?
I went on one of thase sites which give SE info, and it listed the most
searched for word on the net as "porn".

Before you start, I have no interest in porn (www, printed, video, or
otherwise)... But it does seem to be in great demand.
I do wish that those who post porn links would clearly state what the link
is... it saves those with no interest in it from thinking it is linked with
the
newsgroup subject.

===
> I'll give you that one. Voob makes a point....HURRAY! But then again, we
> must deduct one point for him not realizing that scripts and virii are not
> one and the same.
===

True. Some anti-virus companies will list these script pop-ups as viruses,
but by their definitions, they are not. A virus may or may not be harmful,
but they are designed to spread by creating and sending copies of themselves.

One thing I do wonder... When someone posts a link clearly noted as "illegal
porn movies", someone replies with the warning that it is a virus. How do
they know... did they visit the link.

Don't you believe it, I am still looking for things.
Then there's the decorating in the new house. You just get a home how you want it, and then you go and move.
I know someone across the road from me that's moving. All the work done on that house, great fitted kitchen, gas central heating, and just had an alarm fitted... and the new place has nothing but the walls, they will be starting again.

Next week could be a good week for me to try to get some more decorating done. I have to wait in for the workmen to come and sort out some of the many repairs that are to be done, so the house will be a mess anyway... I may as well add some to it.

Hope you get sorted soon.

I can DX on CB all I want... legally.

So, what's your problem with DXing... who gets hurt?
Here in the UK, DXing is legal, it was never illegal. As long as you are using legal equipment to do it, no problem.

The signal doesn't stop dead just because the US law says so, whether two people decide to speak or not does not make any difference, the signal does not suddenly decide to intefere with any other service, just because someone replies from outside that distance.

The signal will travel as far as it wants to, regardless of any laws.
Do US CBers have to give their location with every transmission, so that people hearing them can decide whether the law says that they have to be ignorant and not reply to them?
Do you have to give *any* details at all when transmitting?
Do the FCC give out charts or maps, so you can check the distance?
Can a mobile CBer be expected to check the distance between them and any signal they hear, before replying?

Let's face it, the distance rule was pretty stupid and virtually unenforceable to begin with. But to give CBers 12 Watts SSB on HF, then make DXing illegal... that was ultimate stupidity.
At least our "Radiocommunications Agency" had the sense to remove the dumb rules that were put in place, such as the antenna height and length rules that encouraged homebase CBers to use small antennas close to the ground... those that obeyed the law were extremely likely to intefere with every electronic device in the area, and often did.

I never heard of anyone, ever being prosecuted under those antenna rules, yet they ended up being almost totally ignored before they were scrapped.
Has anyone, ever been prosecuted under that distance rule?

Brainbuster.

Not where I am.
Maybe 99.5% of the residents in your area are "dimwits, fools, lawbreakers, and simpletons". Maybe you should consider moving... unless you fit in where you are.

But then, it depends upon what you define as "lawbreakers"... have you *never* broken any law. Remember, "the law is the law", break any law and you too are a lawbreaker.
This includes speeding, jay walking, littering, driving with defective lights or other defects, driving with uncorrected defective vision.
There are laws on the books that most people do not know about... ignorance may be bliss, but it is not above the law. I have heard that a city in Yorkshire (England) still has a law against sneezing in public... and you can be flogged for breaking that law.

Check this out...
http://www.dumblaws.com/
Some of these laws may be dumb, but break them (even if accidental), and you are a "lawbreaker" too.

===
> > > And those who defend them do not even come up to that
> > > standard
===

Is this meant to scare people out of disagreeing... disagree, and you will be labelled.
I have certificates to show that I am not a "dimwit, fool, or simpleton"... as do many other CBers. I rate official certificates rather higher than your elitist arrogant opinion.

===
> I, too, have helped any number of people into amateur radio
> and continue to do so.
===

Not with that attitude. Calling people "dimwits, fools, lawbreakers, and simpletons" is not helpful.
That is the attitude that is putting people off radio.

If you really don't like CBers, then stop the cross posting to a CB group...
and take another Valium.

Brainbuster.

Very Well said! I agree 100%. Why slam of "flame" someone when we should try and point them in the right direction. Naturally they will try and get top dollar...who wouldn't, or maybe they really do not know the going price.

Lighten up people...it's only a hobby and nobody is twisting your arm to buy the equipment!

Hooray to Brainbuster someone who understands archaic and silly rules
If Cbers are expected to follow some rules then license them.
Another dumb one -Everyone I know who has put a base antenna up higher than what the so called rules state has eliminated interferance to surrouding neighbors.
So what gives with the rules when common sense seems to work better.
A good portion of cbers dont even have a copy of the part 95 rules they just know about them by hearsay
You could go on and on about the operation of cb radio
Oh by the way if this newsgroup is rec.radio.cb why are the hams on here .I guess their group is not as exciting

Hello Sarge:

Its a older Linear Amplifier, that will work on 12, 11, and 10 meters, that uses 1 tube to drive 3 other of the same tubes. It can put out 300 plus watts with fresh tubes.

But the tubes are the older out of production TV type Sweep tubes, that where uses in a TV Sweep Circuits. And of course all TV's now ah days use transistors instead of tubes, so the price of these TV Sweep type tubes, is incredo Buck$, making the Liner Amplifier a Desk model of show and tell, and its days are numbered as being a operational Linear Amplifier.

If you look at RF parts I believe they have the tubes: (6LF6 I believe) http://www.rfparts.com

The Palomar Skipper 300 was a dirty amp in my opinion, and caused some grief with the neighbors consumer electronics.

I have one of these old Palomar Skipper 300 Chrome Dome Linear Amplifiers, but its on the shelve as a Museum Piece for show and well.

The cost of such CB type linear amplifiers will be expensive to keep it going, tubes go South way to quickly, the tube sockets will fall apart, the power supply capacitors and diodes will fail, and short out, the Tube Plate connection Caps will fall apart, the switches will quit working in time, and the of course the switch over relay will die. And even the main power transformer will internally short out, causing the fuse to blow open.

Some guys have used these amps, but in time it will need repair. Take it to the Bank! Be Advised!

Its far more cheaper in the long run to use a higher quality, Ham type amp, that will cost more, but stay together for a lifetime, be cleaner, and probably make ya get your ham lic.

Jay in the Mojave

You are right, this is generally the case, although I can get the reflected power to be equal on both channels if I screw with it enough. I was thinking I might need a need a new meter - this meter is old and it appears to be in good condition but my dad used it on his ham type equipment and maybe its not suited for a CB?

Thanks for the input, Mike

Mike get a longer antenna. Firestick is a good antenna, but the 3' lacks the bandwidth for most cb applications. Your meter is telling you, your antenna is out of its bandwidth. If you used the 4', 5', or even the 7' Firestick II antenna.
Your problem would go away. The longer - the better. Size matters ;-)

Most SWR meters require a certain minimum output power to function correctly. Since the meter you are using was made for Ham equipment applications, where the power levels are normally above 4 watts most of the time, your CB may not meet the minimum power output required. I would look for an SWR meter made specifically for CB application.

Brainbuster, although the classic "relativism" argument makes lots of
habitual criminals feel good about themselves, the problems with that
line of thinking are glaringly obvious. For example, it's OK to speed
130 mph through a school zone because, after all, everyone has broken
a law at one time or another? Or because there are silly laws, any law
that you don't feel like obeying is ALSO silly? Nonsense.

Use your brain, Brainbuster.

So the problem now is not that others are hearing a squeal, but that you are hearing stuff through your stereo? It's likely fundamental overload. You'll need to either 1--turn the stereo off or 2--get some #43 material ferrites and shield the wiring to the speakers. If it's as bad as you describe, that won't help much. Maybe it's doing this because they are both going through a common fuse block. No, never mind. You wired the radio directly to the battery so that couldn't do it. Hum. Got me.

Not at all Aaron. I was simply pointing out that your sole purpose in life
is to turn every discussion into a stab at illegal CB. You never stray from
that route, not even to try to help another poster. Actually, IF you
actually knew anything, I suspect that you would not share the info with
another because someday he MIGHT do something illegal on CB. In your
simplistic mind, that would make you an accomplice, now wouldn't it?

OK, problem solved. After the initial feedback I went and bought a new SWR meter. Needle moves to the calibrate positions on both 1 and 40 and SWR looks something like this:

Channel 1 10 19 30 40
SWR 2.0 1.7 1.5 1.7 2.0

I think that ought to fly and I didn't even have to buy an amplifier ;)

Thanks for your help
- Mike

OK, I can see you are confused, so I'll lay it out for you in terms you can understand. Think of me as the opposite of TRA1N, or SD Jones. Those guys skew everything toward illegality. They believe CB is all about power, squashing mudducks, laws should be broken, etc.

ME<-------------------+------------------>TRA1N

I am at the opposite end of the spectrum. I simply present the alternate point of view, i.e., CB is about communication, amps are counterproductive, laws are worth obeying, etc.

See, if guys like TRA1N and SD didn't exist, neither would I. Because you can't have black without white, bad without good, negative without positive, or night without day. I am merely the natural result of the universal law of balance and equilibrium.

Sure do seem like you listen a lot for someone who is so selective in his
contacts. When you have some room, radio needn't be a contact sport.

Sure enough and so long as it stays below 28 and above 25 you won't get a peep out of me.

There are some aspects that disturb me a tad:

1. I just recently discovered that there are no US allocations in the 27.68 to 28 range because this is a marine FM band in some parts of the world, notably Australia. May be kaput for all I know but I would not like to be the cause of an accident. Nor would I hear them with an AM or SSB rig. Wonder without knowing a whole lot just how free it really is.

2. AM in the freeband is done by louts and brigands. But if you are going to run SSB why worry about 10 kHz channels with a 2.5 kHz bandwidth? Seems a bit retarded not to have adopted USB as standard. Or LSB, same diff. The technical state of the art stinks.

3. If one is going to sink the rasbuckniks into a ham-type rig, why not just take the time and do it right. At some point if you are ready for a real radio you are also ready to do radio for real. Just seems odd.

Well this thing was given to me. I was wondering what bands it covers etc. I have a ham lic. just about ready to test for general.
If this will work well for me for awhile, it'll save me some bucks and I'll get a good ham solid state amp later.

I would run it real low. Don't do a lot of deadkey.

1 minute of AM on low heats up my box more then 5 minutes
on SSB on medium! And the SSB peaks a lot higher.

sounds to me like two separate problems.
Have you tried another mic. ?
Have you tried with the car stereo shut off?
Feedback through the stereo would have to be pretty loud to cause a squeal
on transmission.
I'm thinking possible bad shield wire in the mic. and possibly front end
overload of the stereo when its on or rf following the wiring.

Yeah, won't use AM at all, maybe to tune to but all other will be SSB. I
think I can detune to 5 watts for input to it.

Ah, now your brain cells are percolating. Consider this: there would be no shades of grey that lie in between IF it were not for someone (i.e. keyclowns) initiating the polarizing process by moving to one extreme of the spectrum (i.e. lawlessness).

> with it at about 50-60%.
===

If the mic is a power mic, they can get the rf in them, causing a squeal. The
RF feeding back into the radio can cause the same.
It may help to reduce the mic gain on the radio rather than the mic.

If the squeal stops when the mic gain is down on the radio, then it must be
coming down the mic line. If the mic is wired correctly and working OK, then
RF must be getting onto the mic wire.

I have known new radios suffer with RF feedback. A batch of faulty "Ranger"
radios appeared over here, the RF was getting into the VCO... rather nasty on
SSB. The problem disappeared when the case top was removed. The top could be
left on loose, but as soon as the screws went in, the problem was back.
It turned out to be the return path taken by the RF through the case. Extra
coupling capacitors cured it.

===

In the UK, we need a licence. Trouble is that they are not readily available from the post offices, as they were years ago. So some people do not know they need one, while others just don't know how to get one.

The department that deals with them is part of the post office, but no other post office department seems to know about that department. Whether you go in the local post office, or 'phone the main office, they just don't know anything about them.

They are considering dumping the licence, as the numbers keep dropping... not surprising when they are not so easy to get hold of.

===
> Another dumb one -Everyone I know who has put a base antenna up
> higher than what the so called rules state has eliminated interferance to
> surrouding neighbors.
> So what gives with the rules when common sense seems to work better.
===

As is often said... the law is an ass.
Now the "akc" mob can moan all they like about "rules is rules", but even the police and courts often use a bit of "common sense" when deciding what to do... even they ignore certain violations, or decide that "it would not be in the public interest" to prosecute.

I refuse to believe that the people who decided the original UK CB rules knew much (if anything) about radio and electronics. Now, the "akc" may blindly follow rules without question, but some of us actually have the ability to think for ourselves.

===
> A good portion of cbers dont even have a copy of the part 95 rules they
> just know about them by hearsay
===

Over here, the rules come with the licence... if only you know where to get that from. They are also available on the "net", but very few CBers are on the internet.

===

Aaron, it just seems to me that you are wasting a lot of time and emotion on something that really does not matter. If it did, the FCC would give a shit. They don't, so why should you? I'm not condoning anything, so don't come back with that lame line. If you were out to do anything but settle a personal score, you would have chosen your quarry more carefully. Why is it that you don't spend your time battling illegal drugs or child molestation? Something that really matters. You really have some sort of personal defect that needs to be identified and corrected. Have you talked to the old doc lately? You are as loony as the day is long.

I am fairly confident that the CD player is generating the squeal.

But if he has the gain on the mike all the way down and the mike gain on the radio (if any) all the way down, then how is that squeal getting into the transmit audio for the CB rig?

If it were my rig, I would disconnect the mike and jumper the keying pins at the rig. If the squeal still occurred, and was positively due to the CD player being turned on, then I would be at a loss to the cause.

The problem isn't that they are out of production. It is that the
"golden eared" audio idiots have decided that they make good audio
amplifier tubes. As such, they are willing to pay a fortune for
the tubes.

Randy, it just seems to me that you are wasting a lot of time and emotion on something that really does not matter. If it did, his ISP's would give a shit. They don't, so why should you? I'm not condoning anything, so don't come back with that lame line. If you were out to do anything but settle a personal score, you would have chosen your quarry more carefully. Why is it that you don't spend your time battling illegal drugs or child molestation? Something that really matters. You really have some sort of personal defect that needs to be identified and corrected. Have you talked to the old doc lately? You are as loony as the day is long.

>Try 18 feet of coax

Here we go again.
18 feet is an arbitrary (for all intents and purposes) manufacturer's standard,
not a physical necessity for proper mobile antenna use.
But flame away. I know I can't shake the True Believers who insist that cable
length affects SWR in a set up as simple as this.
Linus

>
>Aaron, it just seems to me that you are wasting a lot of time and
>emotion on something that really does not matter.

Seems you are spending an equal amount of time and emotion trying to
convince me to change my mind. I am flattered. What I post and what I
think matter quite a bit to you, Randy.

>If it did, the FCC would give a shit.

YOU are now the spokesman for the FCC? I think not. Hey, if the FCC
doesn't give a shit, how come people are getting busted for violating
FCC rules? I'll tell you what. Don't take MY word for it. Write to
the FCC. Ask them if they give a shit. Or use whatever words you'd
like. Let us know how you make out.

>They don't, so why should you?

But they do. And I do. Which makes YOU care about ME and what I say.
Such a tidy circle of causality. Aren't you glad to be part of it,
Randy?

>I'm not condoning anything, so don't come back with that lame line.

If you're not condoning "anything" then we have no beef, right? You
don't believe in CBers using linears, freebanding, or otherwise
breaking FCC rules. You and me are two peas in a pod.

>If you were out to do anything but settle a
>personal score, you would have chosen your quarry more carefully.

There must be a person attached to a personal score. Care to back up
your statement with some facts?

No?

(Thought so.)

>Why is it that you don't spend your time battling illegal drugs or
child >molestation?

Maybe I will. Are there drug users (besides Nebo) and child molesters
in this newsgroup? (And do you support their activity?)

>Something that really matters.

So now YOU are the judge of what should matter to people? (That'll
come as a shock to the population at large!)

>You really have some sort of personal defect
>that needs to be identified and corrected. Have you talked to the old
doc
>lately? You are as loony as the day is long.

Maybe you can get Twistedhed's imaginary shrink friend to come into
the NG and back up your diagnosis.

-Aaron-

I understand this. however, the issue here was HAM equipment that
couldn't possibly be modified for use in the 11 meter (27 mhz) band.
there was no mention of hf amps, hf transceivers or other such.

However, being a former cb'er, I would like to see better, cleaner and
more useful equipment on the air. However, that probably will not happen
as most cb radios are of such cheap manufacture that they can bleed on my
teeth at 1 mile and I'd know it.

in any case, I still feel that advertising equipment not designated as
part 95 (class D service) approved on the *.cb newsgroups is
inappropriate (not to mention that the use of such equipment by
unauthorized persons could, and often does, constitute a violation of
federal regulations and even a few laws).

Since when does coax length make A lick of difference? I have never noticed A bit of change when I shortened my coax from 18' to A more manageable 7' from my radio to antenna, A helical dummy load!

Be A part of the solution to old myths. Certain lengths of coax are A bogus story, and I don't buy it.

Thats another good idea to test it. I came in on this thread, I know. What makes you believe it is the CD player? Does it not occur when the player is off? Has he tried changing mics. that you know of? Is there an aftermarket amp in the car somewhere and maybe a linear? If its not the mic., we almost surely have an rf problem I'd think.

just cranked too high....still in process of seeing if I get reports of
sqealing with it at about 50-60%.
===
If the mic is a power mic, they can get the rf in them, causing a
squeal. The RF feeding back into the radio can cause the same. It may
help to reduce the mic gain on the radio rather than the mic.
If the squeal stops when the mic gain is down on the radio, then it must
be coming down the mic line. If the mic is wired correctly and working
OK, then RF must be getting onto the mic wire.
I have known new radios suffer with RF feedback. A batch of faulty
"Ranger" radios appeared over here, the RF was getting into the VCO...
rather nasty on SSB. The problem disappeared when the case top was
removed. The top could be left on loose, but as soon as the screws went
in, the problem was back. It turned out to be the return path taken by
the RF through the case. Extra coupling capacitors cured it.

Sure enough and so long as it stays below 28 and above 25 you won't get a peep out of me.
There are some aspects that disturb me a tad:
1. I just recently discovered that there are no US allocations in the 27.68 to 28 range because this is a marine FM band in some parts of the world, notably Australia. May be kaput for all I know but I would not like to be the cause of an accident. Nor would I hear them with an AM or SSB rig. Wonder without knowing a whole lot just how free it really is.

>Exactly. There also exist a few freqs not far >from there that are assigned to some smaller >countries' military comms.

2. AM in the freeband is done by louts and brigands. But if you are going to run SSB why worry about 10 kHz channels with a 2.5 kHz bandwidth? Seems a bit retarded not to have adopted USB as standard. Or LSB, same diff. The technical state of the art stinks.
3. If one is going to sink the rasbuckniks into a ham-type rig, why not just take the time and do it right. At some point if you are ready for a real radio you are also ready to do radio for real. Just seems odd.

>DX is DX, no matter the recipe.

Well its true you cannot get out far without an amp.
So i got me the biggest mother ~@**~# amp I could get.

It had 5 power settings and the person told me "what ever you do, do not use the top setting - you will never need it".

So i got it home, connected it up and sure enough, first setting and I was all over the city. Great i thought, but what about the 2nd setting..... even better - all over the state with no problems. So i tried the 3rd position.... just incredible - all over the country no problem.
But that was not enough for me, oh no..... i had to try the next setting - worldwide - worldwide.

What more could i want, he was right i did not need the 5th position..... but was that going to stop me..... what do you think?

Well, top setting..... key down.... then there was this great bang as a bolt of lightning hit the ground outside.
Now i am not given to misusing the Lords name, but the shock was too much...

"JESUS H. CHRIST" i yelled as i dropped the mic......

Then this voice came through..... "Yeah, you got your copy..... c'mon".

Betty.

yes the 2950 is alot better unless you think things like a qaulity reciever and
a stable transmitter is important.

What is the proper length of a base antenna for the CB band (in feet please)? This would be a dipole antenna that I am constructing. Thanks in advance!

Nick

p.s. please email if possible. thx.

Nick,
To find the correct length, divide 468 by the
center frequency of the band you want to cover.
The result is in feet, and will be just a bit long
so that you can 'trim'/tune the antenna for resonance.
Add an extra foot or two for making connections, and
start from there. Ought to work fine, last a long
time.
'Doc

{468/f.in Mhz = feet}

I had a AM radio that squealed like yours without any mic gain.
It ended up being a board ground to chassis ground .01mf
capacitor. It was disconnected.

Try if you can to remove all the audio and with a monitor see if
it squeals. Then, if you have the knowledge check for bad
grounds within the radio.

596. The speech.....

Newsgroup: rec.radio.cb
Date: 2002-04-08 20:48:31 UTC
From: aarronvoobner@yahoo.com
Message-ID: <7c30e543.0204081248.49bfce37@posting.google.com>
Source record: 120510

Mark, Steve, and George are all asked to give speeches about CB to the Deaf Society. All are keen to make an impression on their audience.

Mark goes first, and to the surprise of Steve and George, he starts by rubbing his chest and then his groin.
When he finished, Steve and George ask him what he was doing.

"Well", Mark explained, "By rubbing my chest I indicated breasts and thus Ladies and by rubbing my groin I indicated balls and thus Gentlemen. So my speech started Ladies and Gentlemen".

On his way up to the podium the Steve thought to himself, I'll go one better than Mark and started his speech by making an antler symbol with his fingers above his head before also rubbing his chest and his groin.

When Steve finished, Mark and George asked what he was doing.
"Well" he explained "By imitating antlers and then rubbing my chest and groin I was starting my speech by saying Dear Ladies and Gentlemen".

On his way up to the podium George thought to himself, I'll go one better than those keyclowns, and started his speech by making an antler symbol above his head, rubbing his chest, and then his groin, and then masturbating furiously.

When George finished, Steve and Mark asked him what he was doing.
"Well" he explained, "by imitating antlers, rubbing my chest and then my groin and then masturbating I was starting my speech by saying.....

Deer Ladies and Gentlemen, it gives me great pleasure....."

Standard formula for a half-wave is 468/f[MHz] which includes a 5%
foreshortening and which generally is pretty close. That makes it about
17' 3". Be prepared to do some trimming however so I would cut it
initially at 18 feet.

There are several things that cause a dipole to be shorter than the
regular wavelength formula would predict. First is that the end
insulators do introduce some capacitive end-loading and in fact any nearby
objects will cause it to 'tune long'. So unless you have rented the
Goodyear blimp to support it, odds are it will have some sort of
shortening effect.

You should also be aware that the match as well as the length will to a
large extent be affected by nearby objects including the ground; the 73.3
ohm free-space feed impedence of a dipole is rarely seen in practice.
Attic antennas typically are closer to 25 ohms owing to the presence of
roofing nails in the antenna's near field for example.

Feel free to rattle my e-mail and I will be happy to help with specific
installations.

Mopar, have you had good luck with PC-cillin? I tried it, and I don't know why as I didn't investigate it much, but it dropped my connection speed from 2000k to around 600k. I liked the interface, and it was free with my motherboard, but I didn't like what it did to my net speed and dumped it. Any suggestions?

I have a better story.

One day, Brainbuster, being a bloody nerk, a daft sod, and a brummy scruff to boot, hauled his knackered arse home from his vannie job at Marks & Spencer, there to see the latest Voobnarian wit plastered on his telly screen (which doubled as a PC, times were tough you see). Voobner's Viking charm so hotted up young Buster that he nearly dropped his pastie. Straight away, our chap bodged several web pages in honor of his hero. Upon seeing them, Voobner tittered amusedly for a moment, then hurled them into the dustbin.

Drake? I don't own a drake!

Oh, you saw the one's on my site... I just got those from other places... I don't own one.

wish I did own a L7 though... nice amp.....

73 and Yes I am looking for a decent priced HF amateur Radio Amp.

P.S. I crack up at these guys wanting to sell my those KLV amps...I want a real amp!

No Aaron, it sucks to be WRONG. And you were. A script is much different
than a virus, but to those than cannot distinguish between the two, run
away. On the other hand, those that know what they are dealing with should
not fear a virus.

For Sale Astron RS20M 20amp power supply, the one with meters.
Cosmetics are a 8 out of a 10. AES price $120, I'm asking $80 shipped
prepay or COD with payment being a Money Order or Cashiers Check only.

Also have a Motorola 7amp power supply for $30 with the same shipping
and payment conditons. Cosmetics are the same as the other one.

LOL. You are so hung up on who is right and who is wrong. I freely
admit I don't know anything about scripts vs viruses. Moreover, I
don't care if I know or not. So you can have your little victory.
Sounds like you need it.

When setting the SWR on my mobile unit this past weekend, I noticed
that the readings on both Channel 1 and Channel 40 were below 1.5
My question is do both readings have to match ? Would both readings
have to be at 1.3 for example, or as long as they are both below 1.5
is it a good setup?

A pregnant woman is in a car accident and falls into a deep coma.
Asleep for nearly 6 months, she wakes up and sees that she is no
longer pregnant.
Frantically she asks the doctor about her baby. The doctor replies
"Ma'am, you had twins! A boy and a girl. The babies are fine.... your
brother came in and named them."

The woman thinks to herself "oh no, not my brother... he's an idiot".
Expecting the worse, she asks the doctor "well, what is my little
girls name?"
"Denise" says the doctor.

The new mother thinks "That's not bad.... maybe I misjudged my
brother, I quite like that name".
So she asks the doctor "what's the boys name?".

The doctor replies "Denephew".

>is it a good setup?

If you had a consistent reading below 2:1 across the band, especially in a mobile, you'd be doing fine. There wouldn't be much use to try to get it lower... and since you're at 1.5:1 across the band, you're doing great. They don't need to 'match'. Sounds optimal to me!

I understand the concept of adjusting your CB antenna for SWR but I have a question... You are supposed to put the meter in the FWD postion, key the mic and calibrate the needle on the meter to the SET position, then switch to REF position which gives you your SWR.
You do this for channels 1 and 40 and adjust accordingly.... Here's the problem, if I "lengthen" the antenna on channel 1 I can't get the needle to move all the way to the SET position (it stays in the mid
> red-zone), while on channel 40 it pegs and I can set it.
>
> Also, if I "shorten" the antenna, the opposite occurs.
>
> Why won't the needle move all the way to the SET position for channels 1
> and 40 at the same time? is this bad?

How about checking the tune on the antenna? Any more than
1.5:SWR and you're asking for trouble. Make sure you use good
coax. Don't use a mag-mount, and install some ferrite beads on the
coax where it meets the base of the antenna to prevent the feedline from
becoming part of the antenna system and radiating....

Are you about to make me an offer? Usually if someone is interested,
they state that the asking price is high. That's all it is; an asking
price. Here in Canada that amp is, first, unavailable through any retail
channels, and second, any amp in Canada sells for about $1 Cdn/watt. So,
for Canada, I don't think my asking price is high at all.
Thanks for your input and observations.

I am looking for manual or information on a Motorola system 500 CM540.
It has "Electroscan" and 6 buttons labeled Scan, Open, Busy, Load, Clear and
Mem. Scan up and down can be controlled from mike. It's 40 channels and has RF
and IF gain controls and swr/ mod meter. looks to be a very high dollar rig.
Appreciate any info or thoughts.

It reminds me of the old Monty Python sketch called "The Argument".

A: ï¿½ï¿½Look, let's get this thing clear; I quite definitely told you...
M: ï¿½No you did not.
A: ï¿½ï¿½Yes I did.
M: ï¿½ï¿½No you didn't.
A: ï¿½ï¿½Yes I did.
M: ï¿½ï¿½No you didn't.
A: ï¿½ï¿½Yes I did.
M: ï¿½ï¿½No you didn't.
A: ï¿½ï¿½Yes I did.
M: ï¿½You didn't.
A: ï¿½ï¿½Did.
M: ï¿½Oh look, this isn't an argument.
A: ï¿½ï¿½Yes it is.
M: ï¿½ï¿½No it isn't. It's just contradiction.
A: ï¿½ï¿½No it isn't.
M: ï¿½It is!
A: ï¿½ï¿½It is not.
M: ï¿½Look, you just contradicted me.
A: ï¿½ï¿½I did not.
M: ï¿½Oh you did!!
A: ï¿½ï¿½No, no, no.
M: ï¿½You did just then.
A: ï¿½ï¿½Nonsense!
M: ï¿½Oh, this is futile!
A: ï¿½ï¿½No it isn't.

well it is interesting that some of our little do gooders in the lower
48 think that the fcc jurisdiction somehow extends into
canada.....well it doesn't.....and that is a good
thing.....because there are lots of big ham radio strappers that
kick ass in canada doing their natural born thing breaking though all
that qrm, and winning all those radio contesting events.....oh
if the truth was ever known.....who can say.....why is
it that a man running a eimac 10,000a7 tube final rig can win so many
contest.....oh heck .....i'll never
tell.....sdj is down.....

678. Cobra 25LTD Classic wattage output? 2 part question...

Newsgroup: rec.radio.cb
Date: 2002-04-10 07:33:35 UTC
From: Mayor <nonelwishtodisclose@nospam.none.ok?>
Message-ID: <jVRs8.57288$oN6.1136945@news1.east.cox.net>
Source record: 120492

Hi, everyone. Hope I am not crossposting or anything. Anyway, my uncle has a Cobra 25LTD Classic (year 2000 model, if it matters.) that he wants to peak and tune....What kind of peaked wattage can he expect from a stock 25LTD Classic? I have heard as much as 25 watts, but how is this possible? I have read on many websites, as per their suggestions, to replace the stock final with a 2SC1969. But, isn't the 2SC1969 final only rated for approximately 13 or so watts? What is the TRUE wattage one can expect from a basic peak/tune? What is the dead-key power, also?

Second part of my question.......If there is another power modification that can be done to this Cobra 25LTD Classic, what is it?? I have read (they were probably stretching the truth somewhat) that by adding the right components, or mod kits, or whatever, this radio can be boosted up to 35-40 watts. Is THIS possible? And if so, what are the components that would be needed (or) what kind of kit can do this? Where can I get this kit?

Perhaps this is a silly question, but me and my uncle know very little about peaking/tuning/modifying radios. Any and all valid help will be greatly appreciated.

Thanks a bunch.

Mayor.

>recently, is WAY too easy!)

I should also add that changing the RF final is just the first step. Such a mod, done properly, also requires increasing the power output of the audio amp which modulates the final, and requires replacing the audio power device(s). Also, replacing the final requires re-biasing the new transistor, and that stage must be retuned because the new transistor has different operating impedances than the old one. You may even need to replace the driver if the gain of the new final isn't much greater than the old one. If that's the case, the driver stage needs to be retuned as well. You also need to improve the heat dissipation capabilities of all of the new power transistors and/or IC's. Then you need to recalibrate the internal watt/S-meter so it doesn't peg when you fart. Then you need to improve your grounding, power supply and bypass caps, PCB traces, etc, etc, etc.

In other words, ignore those people that tell you that all you need to do is "twist this" and "snip that". These quickie mods will ruin your radio because these radios are not built for higher power. I know because I have hundreds of them in the scrap pile in the shop. I am starting to believe that it's the CB radio manufacturers that put out bad mod info, just so people will break their radios and have to buy new ones.

In a nutshell, leave the radio stock and buy a small 2 pill box.
It will all last longer, run more reliably and will give you a
preamp. "You can't work 'em if you can't hear 'em."

AM requires a 4 to 1 peak to carrier ratio. You're dead key
should be 25% of you're peak modulated power.

If you can find a D2816 chip, you can ground pin 20 to get 450 KHz lower. You will have to ruin (unlock) the clarifier to get back to .xx50. A Expo 'N' kit will allow extras. The Astatic site has mike wiring for all radio's to Astatic mikes. With that and a VOM, you can wire any mike to any radio. www.astatic.com

No, I'm not about to make an offer, but if you look someplace like Yahoo
auctions, you'll see they typically sell around $50 - $65 US. You are asking
more than $1 Cdn/watt also - you are asking $100 US..

Yep, you can, but its not really the best place to connect it as the car electronics/ignition etc might cause interference to the radio receive.... Much better to connect direct to the battery if you can.

Hi!
Well I wouldn't go and start changing the finals
in any radio (except to replace damaged ones)
It is best to ask around locally for references to
someone that has done good jobs "peak & tuning"
radios locally. Just a suggestion, don't have them
cut or remove the modulation limiter, when this
is done all it does is create a very dirty audio on
the radio.
If you want a high powered radio there are lots
of radios that can put out that type of power straight
from the factory. It's like buying a 4 cyl truck and
taking out the engine for a V8 motor, why not buy
the V8 in the first place.

: What do you have out there?
: TNX

You can find some much needed updates for that amplifier on the
http://sonic.ucdavis.edu amateur radio page Far Circuits now sells a
power supply update board along with some other pc board items.

"Mayor" <noneIwishtodisclose@nospam.none.ok?>wrote:... uncle has a Cobra 25LTD Classic, he wants to peak and tune... I have heard as much as 25 watts, ... replace with a 2SC1969. But, isn't the 2SC1969 rated for 13 watts?
*** the max output of this transistor is approx 20-22W. It means, that you can get this power in SSB modulation only. The true AM power (with 100% modulation depth) is 1/4 SSB power. Than you can get 5 (max 6) W using this kind of transistor. But with very good modulation quality! Cobra 25 (and similar) are a very simply radios, with not very good receivers. You may also try to enlarge the microphone amplification on the main board, but never use a preampli microphone. All secrets are inside of the case of radio. If you have no experience - do not be so brave! Maybe, some day you will get a Midland 79-265,very old,but it's much, much,much better!!!
.If there is another power modification to Cobra 25LTD Classic... I have read... this radio can be boosted up to 35-40 watts. Is THIS possible?
***no.!!! in a normal and clever way it's not possible!!! In this situation you may try to apply a "booster" CTE 747, but never use linear amplifiers with power less than 100W declared. Using a CTE 747 you can get approx.40W AM with good modulation. Remember - good modulation is very often more important than power.
And if so, what are the components that would be needed (or) what kind of kit can do this?
*** no kits for it
Where can I get this kit?
*** do not search
Perhaps this is a silly question, but me and my uncle know very little about peaking/tuning/modifying radios.
*** no! it's not a silly question. You are only user, not a technician. 10 years old Cobras are very good, but all new ones are only a X-mas Tree lightings.
Any and all valid help will be greatly appreciated.
*** I'll help you with a pleasure
Thanks a bunch. Mayor.
Best regards from Poland. Chris, since 1982 on CB

You must know a strange bunch of amateur operators. Stereos and telephones aren't picking up harmonics, splatter, or anything like that; they are rectifying the rf. The problem would lie with the telephone or stereo. That stated, I've known (personally) a few hams that have had such a problem - and they invariably aid the neighbor in eliminating it. Of course, these guys were running barefoot - 100 watt rigs. The only power trip type will be the DXCC chasers and a few knuckleheads on 14.313 and 75 meters. They are a small minority (again, unless I happen to live in an unusual area, which I don't believe). Funny, I've also known some CB hobbiests - and gone bunny hunting with them. Stock 5 watt radios. Again, the chuckleheads are definately in the minority, a SMALLER minority amongst the hams. Myself, I was first licensed in 1962, got my extra in 1966, and am currently running all of FIVE watts. I'd care if I caused interference, but I don't cause any.

That would be fine if those preamps did something more than raise the
noise floor. Most CB radios are about as sensitive as they can get
already: i.e, if you can hear empty-channel static, a preamp is just
going to make you turn up the squelch. OTOH, a better antenna will
make a world of difference in transmit AND receive.

A preamp in the mobile makes a world of difference. It allows you
to hear those that hear you. Thier is still allot of noise in those
weak signals but you can here them.

Using you're logic, thier is no such thing as a high powered
CB radio. It is not a CB radio if it exceeds FCC specification.

730. Fry this puppy?

Newsgroup: rec.radio.cb
Date: 2002-04-10 23:06:52 UTC
From: twistedhed@webtv.net
Message-ID: <12196-3CB4C58C-53@storefull-2311.public.lawson.webtv.net>
Source record: 120596

For over 30 years we have had the occasional wild dogs sniffing around the property due to the hounds we breed . In the 70's we started setting salt licks near the bottom of the property for the deer. Over the years we have watched wild dogs take an occasional sniff of the block, then usually walk away. This last generation of wild dogs has taken to actually eating the salt. It was temporarily amusing, then when we tired of it we would let one or more of the hounds out and they would be run off, again, temporarily. That was the typical scenario.
When my tower went up, it was erected in the same spot that one of the salt licks used to be located.
A few weeks ago I was surprised by the sound of this dog doing his gnawing on my tower! He stands on his hind legs and places his front paws around the base, just like he used to do to the salt block. Very loud and determined. I managed to get it on videotape and the sound is awful, even from a distance. The damn teeth marks on the base can plainly be seen. He's coming in almost daily now.
This afternoon he returned. I let one of the hounds out and the other dog just ignored her so the hound took a chunk of the mutts hind quarter and then they went at it for a few then the mutt took off with my hound bouncing behind him. The hound came back 40 minutes later, no worse for wear or tear, and drank from the pond for about 5 minutes then slept for two hours straight.
This poor wild beast doesn't get it yet. Every day, sometimes more, the neighborhood rings with his gnawing. How long before he figures out all he is doing is sucking down metallic aluminum paint?
I'm just surprised that he keeps it up. Maybe a small electric fence will go around this tower. How much juice do I need to run before I can zap him with a key of the mic? Birds I can cook, I dunno about something this large.

>static. Just another helpful mod...

Oh and adding a small jack connected to a few turns of wire near the
final makes a dandy scope probe so you can check that you're not
exceeding 100% modulation. Hope these mods help.

733. Matching linear and radio

Newsgroup: rec.radio.cb
Date: 2002-04-10 23:35:01 UTC
From: JEEPMON <JEEPMON@HOTMAIL.COM>
Message-ID: <F_3t8.271195$q2.32432@sccrnsc01>
Source record: 120597

I have a Realistic bas station and a Texas star 350 HDV linear. How important is it to 'match' the two together?
What does matching mean?
I thought that you needed to 'match' them by turning down the power so as not to overdrive the linear but I have the high drive version.
Also in between the linear and the base I have a frequency counter. Will this matter in the 'matching'?

The counter should have little or no effect on your readings. You would still do better dropping the dead key power on the radio be it a high drive or not.
Train

That when Sparky is not here for 24 hours, that Voob is often absent? Vice versa too. Is it just a coincidence? We may never know. Maybe they are just really good friends and do EVERYTHING together. Same time frame of posts(often late at night, whatever that means...other than insomnia over the illegals), both absent on the same days. Not that I'm trying to tie the two together...it's just an observation.

Hmmm.....

Whats more sad is that people have the time to cry about Illegal Radios and Linears.How about putting the time and effort into something that really matters instead of Illegal CB Gear but that would take more effort than crying about it in a news group or sitting behind a key board looking for a post about mods or Illegal Gear.

Nice thought, Jon, but you seem to be misinformed. That keyclown has
already decided to ignore federal laws and run a linear. The more
power he runs, the more likely it will be that he gets caught. If he
doesn't get caught, at least he will contribute to trashing the band
in his area. Of course this isn't good, but one more amp means one
more step to better enforcement. So I say more power to him.
Literally.

well if you will remember our little cb friend , chuckie, aka comcast creep numero dos, said that he was leaving this newsgroup and never returning......so on top of the attention deficit disorder he claims to have, he can add the congenital liar trait........hello, come in..........

and you know, that's another thing.....every time one of these creeps gets a so-called diagnosis from some bogus shrink, using some kind of pop psychology, they always put these nuts on some kind of damn drug that some drug company is pushing in order to doctor up their bottom line. but the problem i have is every time this asshole takes a shit, his damn drugs pass through his body into his body excrement, which is flushed down the drain, goes to the sewer plant, then is released into my water system, which messes up my water, because the damn chemicals in these drugs , don't go away........they remain.......and i am not sure how effective the water treatment plants are in removing this chemical waste from drinking water.......so to all you freaks in michigan i gots one thing to say.........don't drink that water......chuckie's ridilin is in it, and it will make you happy..........either that or a punk ass bitch like chuckie........remember, bitch is just a word to me..sdj working that bad ass davemade driver around bear country..........and i jus got down.....

Maybe you missed something here. Assuming the receiver sensitivity is
0.3uV, and the noise floor holds at about 1uV, your S/N ratio is maxed
out and a preamp is just going to make the noise floor louder. I'm
sure there are times when a preamp could be useful on CB, like 3am
Sunday morning, in the middle of winter, 60 miles from civilization,
outside of a solar cycle and during a nation-wide power outage.
Otherwise, a better antenna is about the only way to improve your S/N
ratio.

> Thier is still allot of noise in those
>weak signals but you can here them.

On the CB, you can accomplish the same results by turning up your
volume, or RF gain if you have it.

on discussions that you don't want to read in the first place?

750. Tickle Me Elmo (OT)

Newsgroup: rec.radio.cb
Date: 2002-04-11 01:49:04 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <amq9bu0qlohodd8sf0h93elopgv37tmlpa@4ax.com>
Source record: 120612

A new employee is hired at the Tickle Me Elmo factory. The personnel manager explains her duties, and tells her to report to work promptly at 8:00 AM.

The next day at 8:45 AM, there's a knock at the personnel manager's door. The assembly line foreman comes in and starts ranting about this new employee. He says she's incredibly slow, and the whole line is backing up.

The foreman takes the personnel manager down to the factory floor to show him the problem. Sure enough, Elmos are backed up all over the place.

At the end of the line is the new employee. She has a roll of the material used for the Elmos and a big bag of marbles. They both watch as she cuts a little piece of fabric, wraps it around two marbles, and starts sewing the little package between Elmo's legs.

The personnel manager starts laughing hysterically and after several minutes, he pulls himself together, walks over to the woman, and says, "I'm sorry, I guess you misunderstood me yesterday. Your job is to give Elmo two test tickles."

Hi James!
As I have stated many times before:
Licensed or not you as a "neighbor"
should care no matter what. Man, you have
to live next to these people, why in the
hell would you want to piss them off by
ignoring their complaints to you about
your radio equipment interfering with
their stuff. It just makes for an ugly situation
between neighbors.

I'm sorry BC (BigCber),
Again I didn't see what Aaron wrote until
you quoted him, and again all he's concerned
with is being a troll. "Mayor" asked for modifications
to which there is nothing illegal to talk about, hell,
it even looks as though Frank was giving advice
too. I'm sure that Aaron was equally as nice to
point that out to Frank, if not, well it just shows
how single faceted Aaron is.

Hi Mayor it all depends on the meters that are used but I can tell you that on A BIRD-43 that it will only do about 5-7 watts dead key and swing to about 10 watts and that's all it will right but if you take it to some other cheap shop you will find they will say anything and if it don't jive with what I say look out !

You might want to tell your customers that running it above 28.000 will
make a lot of amateurs very mad, that getting caught at it is $3,000 with
the second one ten big ones, and not to do so on major highways unless
they like getting a copy of the picture that was sent to FCC and their
employer in the mail. You know how small these cameras are getting???

well,this should get voobies blood boiling. ive decided to modify an old lafayette telsat ssb 140. its gonna be fun cause its got an O2A chip in it and will modify easily. now i know that i can buy any number of export radios with all the bells and whistles already there.....but the idea of "doing it myself",seems like alot of fun.
after opening up the chip,to at least 40 up and 40 down....i think the next thing any self respecting key clown would do would be to install the obligatory "roger beep" board. next would be the small" mosquito" box im going to install inside the radio to raise the out put from 4 watts to approximatly 30 watts. of course no pirate conversion would be complete without installing an echo board. then lastly,i think a "talk-back" would be fun too. im even thinking of un-locking the clarifier (gasp!!!) but you know....im not a "dirty dog" so well do without clipping the modulation limiter. i think 90-100% modulation is plenty.no reason to over do it.....i might even install a frequency counter just above the speaker,so i wont have to rely on a "chart" to navigate the band.
what fun this is going to be!! when i get-er done...ill post a pic that voobie can forward to the main office at gettysburg (f.c.c.) no doubt once voobie puts them on the trail...theyll jump right up and get cracking!!!!!

> >
> > Use your brain, Brainbuster.
> >
> > -Aaron-
>
> Once again, Aaron buts in with another ridiculous analogy!
===
```

I fail to see where his "relativism" argument fits in... I said:
"the law is the law"
and
"break any law and you too are a lawbreaker."
and even:
"This includes speeding, jay walking, littering, driving with
defective lights or other defects, driving with uncorrected
defective vision."
So, I did NOT say that speeding was "ok", I said that it was illegal.

And, as if that wasn't clear enough, I then said:
"ignorance may be bliss, but it is not above the law"

So, I agreed that all laws are "the law", and even that the phrase "I didn't know" is not a cop out.
So, what is his problem with that, is that not the message that he preaches? Maybe some of the crimes listed reminded him of the things he puts to the back of his mind (not a very long journey) every time he preaches about law "breakers".

If the US brought in a new rule, like our old one, that says that they must use small antennas just a few feet off the ground... would he follow it. Those in this country that blindly followed such rules caused interference, while the "lawbreakers" with large, high antennas did not.
"lawbreakers": 1 Sheep: nil

How about that sneezing law... would he hand himself in to the police if he accidentally broke such a law? Sure, but he may wonder what that strange white suit is for, why the sleeves seem so strange, and why they want him to wear it....
"ah, who cares, they say I should wear it... that's good enough for me".
"hey, this cell has nice soft walls."
"Oooh, the nice Misters are offering me little white sweets".
"Yawn... I suddenly feel sleepy".

"lawbreakers": 2 Sheep: "Zzzzzzzzz"

If the "AKCers" want to act like sheep and follow anything that barks, that's their decision. But they cannot expect everyone else to switch their brains off and start chanting Part 95 while holding their string of beads.

What are "critters"?

I use PC-Cillin, never noticed a slow down, but now I have switched
off the "Real time scan" option.
I'll See how it goes now.

===

Careful, Randy... some anti-virus companies class JS-loops as viruses.
That could be all your ISP needs to boot your account.

I don't know how it goes with Google posters, but I have had my JS disabled
for some time... did it after that "Adam" geezer posted one. The trouble
with the JS loop is that you cannot get out without re-booting, which can
cause problems.

If you are proving a point, you could have sent a message that pops up once
or twice.

OK, Aaron... what gives?
Let's take this slowly...

^ bloody nerk, a daft sod,
You been watching William Regal on WWF.
Sounds like what he would say. You see, he says what the
Americans expect him to say. You can be sure he does not
talk like that once the cameras are off and the audience has
gone home.

^ and a brummy scruff to boot
Now, you lost me there.
We have three options here...
1. You do not know what a "brummy" is.
or
2. Your "net detective" abilities are sadly lacking.
and
3. Your memory is failing.

Let's give you some pointers...
1. I am not a "brummy".
2. I have never been a "brummy".
3. I have never lived in "brummy" land.
4. There are a few counties between me and "brummy" land.
Oh, and...
5. I do not like pasties.

I will not argue about what "brummies" eat, coz I really don't
know that myself.

^ his knackered arse
That's better... "knackered" and "arse" are used all over the UK.

^ from his vannie job at Marks & Spencer,
Vannie? Do you mean Van Driving job?
Again, you're forgetting things from previous posts. If you want to
be a web dick (detective), you'll need a better memory.
Still, even a "vannie" must be a step above a self appointed net cop... who
gets neither pay nor respect, specially from the legal CBers who's arses he
keeps busting for nothing.

^ there to see the latest Voobnarian
Hey, good word... like it.

^ wit
I can think of a more fitting expression.
I'll give you a clue... It rhymes with Wit.

^ plastered
You have to be to spend too much time on here.
(Plastered is UK slang for being drunk).

^ on his telly screen (which doubled as a PC, times were tough you see).
Actually, we do have internet TV over here, but I don't rate it. Same with
the e-mail 'phones, too limited with providers etc. But then I have never
tried them.

^ Voobner's Viking charm
LMAO...
We know that "Voobner" must be a "handle", and your skin colour seems rather
dark for a viking... are you really decended from the vikings?
After all, they were known for invading, raping, and stealing. Is that a good
image for a "pro-legal" activist?

^ young Buster
If only.

^ that he nearly dropped his pastie.
Already done that one, Must have been your pastie, I was just holding
it for you..

^ Straight away, our chap bodged several web pages
Hey, I don't "bodge" web pages.
I don't expect that you have seen my site... No "trial version" WYSIWYG

editors there, pal. Hand coded... upto XHTML standard, regular updates
with more info pages to come.
Is your site still just 2 pages, untouched for over a year?
Did your "trial version" time run out? Times must be hard for an unpaid "net
cop".

^ in honor of his hero. Upon seeing them, Voobner tittered amusedly
^ for a moment, then hurled them into the dustbin.
Oh, now I get it... your incorrect "brummy" theory seems to put rather
a large hole in that theory... does it not.
Or was you pulling names out of a hat again?

You certainly didn't do much checking... coz I found things that
you obviously didn't. You could always swallow your pride, and ask... I
may tell you what I found with my software and searches, then again I
may just want to see you beg.

You could have saved yourself the public embarassment of such a poor guess,
if you had just done a bit of research. There is a chap on this newsgroup
who has spoke to me, and can verify that I am no "brummy", but you're the
brilliant "netcop"... work it out.
Also, if you know what you're doing, you can find out where I am from some of
my posts made during the last month. I could give you a clue... but I am
sure that you feel you do not need it.
But, if it's a "brummy" you are after, then maybe these games can wait until
you find your man (or woman).

I've got an idea... drop the "viking" bit, they were international criminals.
Go for the "mountie" image... Good honest crime fighters who "always get
their man".

Have fun.

BTW: The above is *not* rhetorical, I have removed you from the killfile
so that you can amuse me with your witty (or someting like that) replies.

Brainbuster.

Because, when you so want attention, change your
screen nic to get desired attention, then you get a response.
Otherwise, unless someone quotes you, and I desire to respond,
you do not hear anything, other than those voices in the back
of your head, making you do silly things.....................

Woo hoo! I seem to have touched a nerve here. "Me thinks thou dost protesteth too much". What's that song they sing in Birmingham? Oh you know the words....

"Oh-Oh my mothers a whore on the Liverpool Docks,
My brothers in borstal, my sisters got pox,
my uncles a pervert, my auntys a slag,
the Yorkshire Rippers my Dad.
We are the shame of all europe, the nil of the north,
we are the red scum and scousers of course,
we wont drink whisky or newcastle brown,
the Birmingham Boys are in town,
Na-na-na"

Making death threats on a public BBS? Not too smart. I know one forum moderator at bigradios.com that the FBI will soon be talking to.

Greetings!

Answering the paragraphs below...

On Wed, 10 Apr 2002 07:33:35 GMT, while the modem was busy tying up
IRQ's with the Mouse, "Mayor" <noneIwishtodisclose@nospam.none.ok?>
dissertated the following:

:+> Hi, everyone. Hope I am not crossposting or anything. Anyway, my
:+> uncle has a Cobra 25LTD Classic (year 2000 model, if it matters.) that he
:+> wants to peak and tune....What kind of peaked wattage can he expect from a
:+> stock 25LTD Classic? I have heard as much as 25 watts, but how is this
:+> possible? I have read on many websites, as per their suggestions, to
:+> replace the stock final with a 2SC1969. But, isn't the 2SC1969 final only
:+> rated for approximately 13 or so watts? What is the TRUE wattage one can
:+> expect from a basic peak/tune? What is the dead-key power, also?

Nope no cross posting here...

You might be getting Peak watts [instantaneous power] versus carrier
watts confused? Do you mean RMS watts?

Ask these people what are they using to measure these readings.

A 1969 final is not recommended in my book, simply due to some factors
involving the power levels you want to achieve.

Peak power on a typical CB radio averages between 16 to 22 watts -
peak power, audio added to carrier. But, this doesn't mean you'll get
25 watts in carrier/dead-key power, far from it. Remember what you're
using to measure this. And what are these people referring to when
they tell you they've measured this.

Dead key power, on a "converted" radio, stays pretty close to 4 watts
unless you like to generate harmonics, as RMS measurements. At that
point, any power levels above that is anything goes.

Changing a stock final, like a 2078 to a 1969 - will not get you much.
If anything, you can shorten the life of the radios AM modulation
[reactance modulator] transformer due to the extra current draw the
1969 will ask for. Not recommended for a Cobra 25, or any AM only
radio using reactance modulators for converting DC and Audio to supply
power to the final and driver.

:+>
:+> Second part of my question.......If there is another power modification
:+> that can be done to this Cobra 25LTD Classic, what is it?? I have read
:+> (they were probably stretching the truth somewhat) that by adding the right

:+> components, or mod kits, or whatever, this radio can be boosted up to 35-40
:+> watts. Is THIS possible? And if so, what are the components that would be
:+> needed (or) what kind of kit can do this? Where can I get this kit?
:+>
:+> Perhaps this is a silly question, but me and my uncle know very little
:+> about peaking/tuning/modifying radios. Any and all valid help will be
:+> greatly appreciated.
:+>
:+> Thanks a bunch.
:+>
:+> Mayor.

Some people take a good radio and try to get more power out of it by changing the number of winds in the reactance modulator to get a little more swing out of them. Others change the caps and coils in the Driver to Final chain, maybe a resistor or two, along with the parts in the output filter to make them *appear* to produce more power, but anyone worth their salts realizes that this is not the way to go.

Once again, you have to consider the advice you're getting from others regarding this.

If you have to ask for the "whereabouts we can find this kit" - you are asking the wrong question. Every radio line is different, yet the same. Some models can take the abuse you're asking about, while other radios quit before you can even switch over the modulation meters knob from SET to see if it even works.

I'm not saying it's not possible, just not practical. You can put yourself or your patrons in an embarrassing position if you try to get more out of a typical CB thinking that if others can do it, so can we. Thats setting yourselves up for failure.

I'm not trying to flame you, but anyone that knows about what goes on in the RF chain, doesn't need to ask these types of questions, they know how it's done and what the consequences are.

I'd say experiment on your own first, then see if it's possible. I can say with relative ease that the answer is yes, but how well and for how long is the answers you'll have to determine.
Regards!

Wouldn't be difficult to do. Even an "Eliza" type primitive AI would be
able to pull it off.

Then the big question would be; "Is it real, or is it memorex". The
obvious answer would, of course be, who really cares?

Well there is plenty of room inside that big case. Personally, I
wouldn't waste my time with the echo board or roger beep since they do
nothing to enhance your signal. They are only attention getting toys,
that have the potential of alienating you from the many people who don't
care for them. I'd replace the echo board with a good speech processor.
Talk-back is also not necessary unless you are in love with the sound of
your own voice.

Installing a small amplifier will require that you "beef up" the
internal power supply (I assume you want it all self contained), since
it is only good for about 5 or so amps. An additional series pass
regulator, and likely a heavier duty power transformer will be a must.
Be sure that the amplifier is class AB if you have any hope of using it
on SSB, and wish your AM to be clean as well.

There is a "slick" way to do the PLL mod. Use 4008 chips as binary
adders, and you can align the "bands" of channels just like export
radios do, and it makes finding channels easier than the usual switch
truth chart.

I applaud you for not wanting to clip the limiter. In addition to
causing splatter, running that radio with the limiter clipped, and too

much mike gain from an amplified mike can shorten the life of TA7205 audio amp chip.

I don't know about your area, but we had a fairly sizable group that used the FM mode. Adding FM to that radio is fairly easy as well, with one chip FM IF/discriminators on the market for receive, and running TX audio to the PLL VCO for TX.

Good luck!

Dave

sounds like your going to turn a very nice radio into a unstable piece of shit
with all that add on trash. those built in amps really suck. dont plan on using
ssb with it after your done either.

I've never sent any of that garbage to anyone. Nor would I. Hell, after all the bitching I did to ISP's about the Anti's spamming the group, that would be all the ammo they needed, eh? Nor have I ever....um, shall we say entered another's computer without permission.

And yes, the AV companies do tend to class JS-loops as virii, but then again they don't want anyone to simply not allow it. That wouldn't sell more of their product to the unknowing. It's much better for business to perpetuate the hype.

By the way, how's the CB today? <<g>>

Cool. AFAIK, they are almost identical to the galaxy 949/959 and have alot
in common with some of the rci/galaxy 10 meter radios. I plan on keeping
mine sealed; if I want more power I'll get a license. I actually already
ordered mine (696F) and am expecting delivery today.

Thanks,
Tom

A new two year degree is being offered at Life University...
Becoming a Real Man!

That's right, in just six terms, you too can be a real man.
Please take a moment to look over the program outline:

FIRST YEAR
Autumn Schedule
MEN 101...Combating Stupidity
MEN 102...You too can do housework
MEN 103...PMS - Learn when to keep your mouth shut
MEN 104...We do not want sleazy underthings for Christmas

Winter Schedule
MEN 110...Wonderful Laundry Techniques
MEN 111...Understanding the female responses to getting in at 4 a.m.
MEN 112...Parenting: It doesn't end with conception
MEN 113...Get a life, learn to cook

Spring Schedule
MEN 120...How NOT to act like an asshole when you're wrong
MEN 121...Understanding your incompetence
MEN 122...You, the weaker sex
MEN 123...Reasons to give flowers

SECOND YEAR
Autumn Schedule
SEX 101...You CAN fall asleep without it
SEX 102...Morning Dilemma: If it's awake, take a shower
MEN 201...How to stay awake after sex
MEN 202...How to put the toilet seat down

Winter Schedule
MEN 210...The remote control: Overcoming your dependencies
MEN 211...How NOT to act younger that your children
MEN 212...You too can be a designated driver
MEN 213...Honest - You don't look like Russel Wong - Especially naked

Spring Schedule
MEN 220...Omitting @#%! from your vocabulary
MEN 221...Fluffing the blanket after farting in not necessary
MEN 222...Real men ask for directions
MEN 223...Thirty minutes of begging is not considered foreplay

Betty.

A man walked into his backyard one morning and found there was a gorilla in a tree. He called a gorilla-removal service, and soon a serviceman arrived with a stick, a Chihuahua, a pair of handcuffs and a shotgun.

"Now listen carefully," he told the homeowner, "I'm going to climb the tree and poke the gorilla with this stick until he falls to the ground. The trained Chihuahua will then go right for his, uh, sensitive area, and when the gorilla instinctivly crosses his hands in front to protect himself, you slap the handcuffs on"

"Ok, got it." the homeowner replied. "But whats that shotgun for?"

"If I fall out of the tree before the gorilla," the man said, "shoot the Chihuahua."

well don't worry about bubble buster........you are not missing a
thing.....my point is this.......those pictures on that website do not
in any way shape or form, represent the available female population in
this area by any stretch of the imagination..........the fact that
these bimbos hang around with those pool room crack hounds, is
testimony to just exactly what they are all about.....i can only say
that the babes in this area can rank , beauty wise, with anyone in the
world.......and that is a fact jack.........south texas is known for
its good looking babes.........but you got to dance with who brung ya,
so saying that , i will say this..........they are some of the most
independent, ornary, back stabbin, coniving, manipulating bitches i
have ever had the honor or dishonor to meet......and frankly i think
they are spoiled and all they care about is your financial statement.
it is my opinion that they should get their buscuits in the oven and

their buns in bed and stfu...and for that i say,.....thank you kinky friedman.....thank you, thank you very much.....sdj working this davemade driver around the bighorn in bear country and i jus got down.....small driver big antenna and i am back quiet.....

I would like to invite you to the most popular forum on the net dealing with radios as well as a lot of other things.

Some areas of interest are, CB Radios, Export Radios, Amplifiers, Ham Radios, Antennas, Meters and Test Equipment, Modifications, Marine Radios, Scanner Radios, Short-wave Radios, Vintage Antique Radios, Microphones & Wiring.

We also have a very large For Sale area with hundreds of listed items as well as Product Failures, World Of DX'ing, Business and Personal Website Advertising.

There are also some other special interest areas for your enjoyment such as Backyard BBQ, The Sports Arena, Home and Auto Repair, Music, Off Roading, Hunting & Fishing.

There are even a couple of areas devoted the our war at hand, America Stands United and War Time Humor.

Not only do we have all these popular areas of interest, we also have our own, very active Chat Room. There are usually people in there 24/7 and you will not meet a finer bunch of people.

We also Have our own CDX DX Club where we have members all over the world that enjoy the art of DX'ing. Right now there are over 50 registered members of the DX Club, and we have DX Contests every month for the members. The link to the club Home Page is below.

We also have a Radio Related Merchandise store where you can get all kinds of T-Shirts, Coffee Cups, Sweatshirts, Tote Bags, Ball Caps, Mouse Pads and much much more with all your favorite radio equipment on them. Well worth checking out for sure.

We also have our own Auction site where you can post the stuff you have, or bid on the stuff that is already there. There are no listing fee's or commission fee's, so you pocket all the proceeds from your auctioned item.

As you can tell, we are a very established forum, with all kids of things to see and do. We have over 560 registered members and we are reaching 12,000 posted messages to the forum.

We have a few well known people that moderate some of our areas such as Mr. Pain, Peakaboo, The Defpom, Rogerbird, Old #7 and many more.

We are not affiliated with any online or offline retailer, so you can rest assured that you will get the honest opinions of everyone on the forum concerning your questions dealing with radios, retailers and their products.

What are you waiting for, all the links are below for you to access the best, and most informative forum on the net.

Hope to see you there!

Righto.

> and even:
> "This includes speeding, jay walking, littering, driving with
> defective lights or other defects, driving with uncorrected
> defective vision."

Affirmative.

> So, I did NOT say that speeding was "ok", I said that it was illegal.

Yes.

> And, as if that wasn't clear enough, I then said:
> "ignorance may be bliss, but it is not above the law"

Agreed.

>
> So, I agreed that all laws are "the law", and even that the phrase "I didn't
> know" is not a cop out.

So true.

> So, what is his problem with that, is that not the message that he preaches?

Insofar as it reflects respect for the law and the rights of
others...YES.

> Maybe some of the crimes listed reminded him of the things he puts to the
> back of his mind (not a very long journey) every time he preaches about
> law "breakers".

Huh? What? You're trolly is off track here, my brummy pal.

> If the US brought in a new rule, like our old one, that says that they must
> use small antennas just a few feet off the ground... would he follow it.
> Those in this country that blindly followed such rules caused interference,
> while the "lawbreakers" with large, high antennas did not.
> "lawbreakers": 1 Sheep: nil

I do not know your laws and their intended purpose. However, in the
case of a law that caused unintentional harm, wouldn't "the right
thing to do" be to change the law rather than defy it?

> How about that sneezing law... would he hand himself in to the police if he
> accidentally broke such a law? Sure, but he may wonder what that strange
> white suit is for, why the sleeves seem so strange, and why they want him to
> wear it....
> "ah, who cares, they say I should wear it... that's good enough for me".
> "hey, this cell has nice soft walls."
> "Oooh, the nice Misters are offering me little white sweets".
> "Yawn... I suddenly feel sleepy".
>
> "lawbreakers": 2 Sheep: "Zzzzzzzzz"

Sorry. The fact that there are silly laws is NOT a valid excuse for
breaking any law that you see fit.

MAGISTRATE: Does the accused have anything to say for himself?

BRAINBUSTER: Ceteris peribus, my Lord, I'd rather not obey the law,
talis qualis.

SOLICITOR: Be quiet you bloody twit!

> If the "AKCers" want to act like sheep and follow anything that barks,
> that's their decision. But they cannot expect everyone else to switch their
> brains off and start chanting Part 95 while holding their string of beads.

That's the kind of attitude that'll land you in Borstal for sure.

Hey and where did all that whining and crying get you? Except a date with Landshark I can see it now you suck him off while he writes a letter to an ISP{ and he does you doggie style while you type away 2 crying fruit loops that don't talk about CB's on the NG bitchin and crying about people Anti's spamming the group. As you see your complaints probably went by the wayside. Trying to restrict someones free speech because you don't like what they have to say is weak and really proves what you are made of.

The cb radio was kickin today, speaker craklin with truckers meter jumpin with audio....

Someone needs to explain to twitsy the meaning of " > " which should be in
front of every line of quoted text, if it is a quote of a quote and you are
replying to that then ">>" would be in front of the original text, then
the reply to that would have a ">" in front of it. But if Twitsy is only
replying to 1 persons post then a simple > in front of each line of there
text differentiates who said what. It is not that hard even for his state of
mind.

The reason that the posts aren't linked to the original
is that when you copy and paste from one newsreader to
another you lose the message you were replying to and
have to create a new thread becuase someone was to lasy
to find it in the other newsreader.

Actually Comcast Boy, it worked rather well. I didn't have a problem with
what anyone said. They can certainly voice their opinion, much as you
did(although I'm somewhat confused about your homosexual tendencies).
Anyway, it did stop the flooding. You know, and I'll make this so that even
you may understand it, the repeated posts of the same garbage, with no
content. It stopped, so it worked. That's where it got me. BTW, you may want
to call Sparky and let him give you a lesson on where periods go.

My Good Man, Ab inito Prima impressionis el keyclowno Nexus with Jus naturale Inter alia, and Ipsissima verba against them will Ipso facto bring Actus reus Ad hoc Per minas. With that being said, a Mens rea is Orse Contra bonos mores and it is Consensu Ex post facto of continual freebanding, Ex facie we need a Faciendum by Ex cathedra the FCC, Ex gratia of Rileys Heart. El keyclowno gets confused with De lege lata and De lege ferenda. The anti's are Amicus curiae, Custos morum so to speak, but we need a Magnum opus Suppressio veri may lead to Suggestio falsi. Quaeitur what can you do Sub modo Pro tempore In terrorem, In omnibus Quaere. De futuro Coram non judice Sub nomine AKC Ei incumbit probatio qui.

828. Re: Matching linear and radio

Newsgroup: rec.radio.cb
Date: 2002-04-12 00:36:49 UTC
From: Professor <bgriffey@core.com>
Message-ID: <3cb62c1d$0$1521$1dc6e903@news.corecomm.net>
Source record: 120691

Matching in this case means setting the drive of the radio to accommodate the design of the amplifier. Exceeding the drive power means that the amplifier will generate unacceptable levels of harmonics for starters. This has a direct (negative) impact on interference caused to other bands such as television and broadcast radio. A simple way to check this match is to hook the amplifier to a current meter and transmit. If the current swings backward during AM modulation, that indicates an overdrive condition. Attempt to set the radio drive so either the ammeter swings forward or is steady during AM modulation. Of course on SSB, the current meter will always swing forward...

Starting with my antennas: I had an A99 but I took that down just
before winter. I have a home-brew coaxial dipole on top of the roof, a
CCD in the attic and another CCD rolled up in the garage. I have a
RoadTalker SSB in the truck, the car has a funky old in-the-dash
AM/FM/8-track/CB one-hander, and I switch out my base often between a
SBE Trinidad III, a Motorola Mocat, and a Hallicrafter's CB-3A. The
keyclowns might get a kick out of the last one because it has been
modified: the crystal sockets for the last channel have been mounted
on the front panel for easy access. That's no big deal tho, since HC-6
crystals for the freeband aren't exactly common. It only puts out two
watts, but has a better receiver than any CB radio I have tested. I am
also working on a Bengal SSB (restoring it from a crappy freebander
mod that almost ruined it -- if anyone has a channel selector knob
ring, please let me know). I also have several dozen other radios that
I might hook up once a year just to see if they still work. I usually
hang out on 13 (my lucky number) for AM and 39 SSB. I also have an old
Royce that runs 24/7 on 9. (I should mention that, around here, the
keyclowns stay on 1 because most of them can't count any higher,
except when reading a wattmeter.) Everything else I play with or work
with I have mentioned in previous posts.

Now, have I satisfied your curiosity?

The wheatstone bridge approach works ok for high-impedance designs,
but in a power circuit it fails miserably under any voltage-current
phase shift. About the only way to match low impedances between an
exciter and amp is with a SWR bridge, and the amp's input really needs
a big-ass trimmer. Of course one could build a pair of pi-filters and
put them back-to-back somewhere in the line...

I too have wondered about George Busch
WA3MOJ and his sexual advances on this group.
He is so infatuated with me, he has made up an AOL
screen name after me, he mentions me when typing out
everyone of his post, he's posting on all sorts of groups
using my name, I truly think he is in love with me. He
always seems to talk about some sort of homosexual
sex act with me or someone else, so my advice to you
Randy is to stay away from him, he acting like some
sort of homosexual stalker and you maybe next on
his love list.

LMFAO!!!!!!!!!!!!

Good idea Prof although ANY variation in current is a sign of
non-linearity but more than likely a case of crappy design rather than
overdrive. A stunt you may wish to explore is the common 'non-linearity'
detector often used with SSB because, as you say, current tells you zip.
If you assume that a linear amp's function in life is to reproduce the
input signal only more so, comparing the input and output via what amounts
to a classic Wheatstone Bridge will yield an error voltage across the
bridge that is useful as hell in keeping a signal clean. In exciters with
Automatic Level Control you can feed this back into the ALC and keep
things squeaky clean.

One of the easiest ways to demonstrate phase problems is with a series
LC circuit. At resonance, the current across the circuit will be max,
but the voltage drop across the cap maxes out at a frequency BELOW
resonance (and sometimes with higher Q than the LC circuit!). And the
same components in a parallel circuit will generally have a lower Q,
which is something you won't find in any textbook. Also, the Q and
resonant frequency of any resonant circuit is also affected, of
course, by the I/E phase and impedance of the driving circuit. Tubes
make all this easy by eliminating the current, but when working with
bipolar everything must be calculated using power and phase. Cool
stuff.

Thanks for the update! As I have noted here before my experience is
largely in hi-impedence circuitry, tubes and FETS, so it is no giant
surprise that a blunderfutz occurred here. In GG circuits where there is
an inversion it is customary to turn it around but that is no big deal.
In straight up circuitry, the simple solution is the forward coupler out
of an SWR bridge for which there are designs out the waz. It would seem
that this is the way to handle bi-polar circuitry; they all gotta match 50
ohms somewhere.

Along the lines of matching, when the solid state exciters started to come
in, a lot of hams found their trusty GG amps presented some really crappy
loads to the exciters which caused the SWR protection circuits, a large
part of ALC BTW, to do strange and stupid things. I doubt the average CB
is that well protected but I wonder if this is possible today. With the
input impedence of the usual Muntz going from hell to breakfast I wonder
if you might not get some dynamic clipping? Wouldn't that be a pig's

breakfast?

Hello Randy: Bitchen radio, the Icom 746.

They will no dought be sold for less money due to the 746 Pro series
coming out.

The 746 is truly a great radio, leaps and bounds ahead of the pack.

Jay in the Mojave

Answer the question, goofball. How do you figure it would be a legal
dilemma? Who would know? Get real, Sasquatch.

Sure, if you like to teach your kids that laws are only to be obeyed
when it's convenient, and if you're sure an NAL won't disrupt your
financial responsibilities to your family, and if... hmmm... "coveted
piece of paper"? You sure are pissing in the wrong bush, Randy!

>it cleanly?
>
>Just so I know.

Randy it's not only respect for the law (in this case, FCC rules) that you lack, but respect for the rights of others. CBers are limited to 4 watts in order to minimize interference. You come along and say "piss on the rules" and run your Icom (which is more than the legal power). By doing this you are in effect saying "piss on the other users".

Plus (if you are a ham) you cast the thousands of other law abiding hams in a bad light. If your ticket means so litle to you, then just throw it away.

Oh I can hear you now saying "WAHH. BUT EVERYONE ELSE DOES IT". First of all Randy, not EVERYONE does it. Secondly, why not think for yourself?

If everyone else jumped off the Golden Gate Bridge (for example) or advertised for sex in transexual newsgroups while their wife was pregnant (like Landshark did) --- would you follow them?

Maybe you would. That shows a distinct lack of character, Randy. Why not grow up instead of making lame excuses for your selfish behavior?

Dufus, the Icom has adjustable power output....even less than 4 watts. The
argument you want to start here is invalid.

Hello Sparky:

I ran my posting thru Tools, to spelling and grammer, it came back:

"Not a problem G.I. in fact its bitchen."

Then the technically correct que came up and said:
"Technically correct to bitchen, spelling and grammer is good enough for whos it's 4."

Thats what I thought........ Rock on dude!

Hello Josuha: Yes there where a few rare models that had tubes, with 40 channels.

I have a premium, mint, gold plated, bitchen, 10+, NIB, life in the fast lane, neat-Oh Robyn T-240, that is a tube radio that has a digital read out for the channels. This thing sounds like WLS next door! It has a engraved American Flag on the back of the D-104 Mic, with bright colors, and a great inscription that says: "Keep on Truckin" Meaning never say die.

Keep an eye out on E-bay there, there.

Jay in the Mojave.

If you are going to run illegal equipment, I would much rather it were
properly set up ham equipment - rather than clipped and peaked CB gear.

Still sinking, yet foolish pride keeps him from accepting help from a
passing boat.
Rather go down with the ship, than take help of the enemy.

Aaron...

I was just trying to make it so simple, that even you could understand...
without having to keep asking more questions. Obviously, I have to
try a bit harder... and make it more simple.

If I had just said "I am not a brummy", you would have said that I was
still in brummy land.
If I just said that I was not a brummy and I do not live there... you
would have said that I must have moved.
That's the type of guy you are, which is why I answered them all at once.

You can make up any rhyme you like about the brummies... what I said was
true and I do not even know any brummies. So do your best, give me a
good laugh. I'll start off with a Viking one and you can create one
about brummies.

The Viking fairy,
who is so contrary,
So little, does he know...

He can't use a map,
So he just talks crap,
His brain is on a go slow.

As you are the one claiming to know more about me than I do (what a
joke), to use the newsgroup battlecry...
Prove it!
Show us all how you come to that conclusion... prove whatever links you
think you have.
You will need a bit more than the fact that I am in the same country as
brummies, or that you think a message on this group came from brummie land.

Please,don't blame me just because you are too lazy to do enough searching
to find the ISP used in a posting. I found it, and the ISP is even further
from brummie land than I am... and I could show the links.
But why should I do all the work for you.

I can send one e-mail that would prove to the recipient exactly what part of
the UK I am in (as long as they have Neo Trace or something similar). If they
use the node number of the system, the server name will give who owns the
actual computer (not an ISP name), and what part of the UK it is in.

So, Aaron, you think the level of noise suggests a nerve being struck......

You need some painkillers for that.
You and Georgine make plenty of noise on here... a couple of Valium
tablets may calm your pain.

REMINDER... prove your theory. Don't keep dodging the difficult issues by
cutting them from the quoted text as if they never existed. That's a sure
sign that you cannot answer them.

Brainbuster.

> bad mod info,
===

Just starting to believe?
Believe it!!!

I have proof... a copy of a fax from a manufacturer, giving a CBer instructions for conversion to CB frequencies. The manufacturer name and fax number is at the top of each page. The document that was faxed is clearly their own document that they sent out.
So, they make the radios capable, design and print the mod info, then send it to anyone asking.

===
> just so people will break their radios and have to buy new
> ones....
===

I do not believe that...

If they can get CBers to buy their radios, they can increase their customer base.
Even if the CBer is buying second hand, it still enables the previous owner to upgrade.
Also, they must consider that most new Amateurs are ex-CBers... so they are getting their product in front of future customers.

Very cheap advertising, and rather like handing out free trial versions of the product... all for the price of a fax (they may even do it by e-mail). The fact that so many of the radios do get wrecked is rather like the heat off a light bulb... an unwanted side effect that some manufacturers are making attempts to limit. Printing out information with diagrams and idiot resistant instructions increases the chances of the repair being done reasonably well.

Yes, they know that the mods make the radio illegal, but as was said before on this group, money talks. Businesses will do what they can to improve their sales and profit, the only way to stop it happening would be to make the passing of information illegal. I don't see that likely.

I was once given a small catalogue, with products that had rather questionable uses. It was interesting to note that one of the books was said to be "illegal to sell"... so they were offering it free with purchases.

You just cannot stop sh*t from happening.

No, Sparkles... I did not purchase anything from them, I did not even ask for the catalogue, but it is interesting to know what some people are upto... before they use the product on you.
Although, I was rather tempted by the slot machine cheats.

Brainbuster.

Keep right on round the bend,
Though your tired and weary,
Still journey on,
'Til you come to your dismal abode,
Where all the tatter you've been dreaming of,
Will be there (where???),
At the end of the road,
Birmingham! Birmingham!

>

Good sounding money for a cheap mic. The PROBLEM I have seen with a few dozen of them is the plating comes off in your hands within a month or so of buying it. While they have a warranty on them this shouldn't be happening. 636L is probably the best choice.

http://mywebpages.comcast.net/mnowlen/heath-gw-21-front.jpg
http://mywebpages.comcast.net/mnowlen/heath-gw-21-top.jpg

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

Reminder to Richard:

The 746 is an all mode HF, 2, and 6 meter rig with 100 watts out on all bands, so it does have a "known use". It's also cheaper than any dedicated 2 meter all mode. It was made in the last 10 years, so I don't expect you to know that.

Has anyone here ever dealt with Skywavz Electronics? Any opinions on them?

I am looking for a Maco M-103 and have ruled out Copper and H&Y after reading many horror stories about them. Anyone have a good reliable source for one of these antennas?

I am well aware of it but who in hell do you think you are kidding?? It is the classic rig for Lifer Techs cum freebanders (especially as in your case when you say it is opened up) to fiddly-fart. Be a lifer with my blessing and permission but leave the snow job for someone without a shovel.

The Icom violates part 95 by not being type accepted by the FCC and second the frequencies the rig operates on is not fixed but variable, so that's why they call the "big knob" a VFO, which is a no-no on a type accepted CB radio.

Your a smart guy, I assume but may be not, and can read at least at the high school level the regulations in Part 95 are clear about what is legal and what is not.

That's funny Twisted since nobody but you believes it any more. You pointed your fingers at too many other posters, and accused them of the same thing, all of course without any proof one way or the other. Now that you have earned the title of "group punch clown" nobody is going to believe a thing you have to say.

This might be a good exercise for my 9 Y/O. Not flaming Brian but the kid got the R/S 101 experiment thing done way too fast and this might be just the thing to see if he has what it takes to be my kid! I even went and got him his very own Hexacon Therm-O-Trac. Can't have him learning with crappy tools!

Talk to Lelnad, it's how he was caught.

>That's funny Twisted since nobody but you >believes it any more.

Actually, Lelnad, the entire contingency, your malcontents included, are now aware of your unemployment and how many ISP's you were stripped of. It goes hand in hand with your other lies, such as your statement a year ago about studying code preparing for an upgrade. When you realized you would actually have to WORK at it, it frustrated you, you ranted against it, and the NCI sig appeared. Just who is it you purport to speak for again, Lelnad? Oh, never mind, we know.

>You pointed your fingers at too many other >posters, and accused them of the same thing

And they were guilty as sin, but this isn't about them, it is merely an illustration using your lack of self-control as an example of how you lost your fun, but thanks for coming when called.

Thanks for the compliment, but that may be a stretch. I'm sure train
knows plenty about certain aspects of radio of which I have only
rudimentary knowledge. Like specs on the latest keyclown rigs, stock
quotes for amp manufacturers, where to get the most expensive rig that
will do the same job as a $5 flea-market special, etc.

Randy, what is it with the guys from the Big Horn? Sd Jonsie was hoping to reveal who and where Mr. Aaron H. Voobner is and basically put out a contract on his head hoping for the info, but someone who sd jonesie must have pissed off along the way offered the AKC some info on him and they said perhaps Ol Sd wouldn't mind if the playing field was level so they gave Old SD Joneses address out and there consent to post it. I guess if anything happens to Aaron at least he has sd jones name and addy. Some guys are real serious about threats so every precaution must be taken. Go Figure.

I have often wondered what it is about Texas that breeds so many illegal CBers. SD Jones, Randy, Toll Free, Nebo, Peekaboo, EEI, ww383, etc. Is it the air quality or the poor educational system? (It's like San Francisco Bay area breeding guys like Landshark that chase transexuals. Or the Birmingham England area breeding stooges and half-wits like brainbuster)

Randy,

just so you know, it is illegal to use any amateur radio gear on 11m. but hey, people do things every day they aren't supposed to and don't get caught. one of them might even be YOUR neighbour.

929. Latest Keyclown Idiocy

Newsgroup: rec.radio.cb
Date: 2002-04-12 23:45:35 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0204121545.3a956b64@posting.google.com>
Source record: 120744

I don't understand why some keyclowns go on. They KNOW I'm watching
them. Like for instance, in a certain bulletin board where keyclowns
gather.

Check this out. The fun starts when an actual non-keyclown opinion
gets posted. This guy is telling them to leave a mod limiter intact.
OK, let's join our discussion in progress....

From: l r
To: cbtrick@yahoogroups.com
Sent: Thursday, April 11, 2002 12:53 AM
Subject: Re: [cbtrick] Limiter mod needed for TRC446

leave the limiter alone. it`ll cause harmonics, tvi
and all kinds of neat stuff.lol. besides more than 100
percent modulations not necessary. that radio should
have a mod pot in it. turn it up. i speak from experience.

From: "Train" <cbmods@optonline.com>
To: <cbtrick@yahoogroups.com>
Sent: April 11, 2002 4:18 AM
Subject: Re: [cbtricks] Limiter mod needed for TRC446

Something tells me Bill can decide how he needs to set up a radio
without
being preached to. By telling him where to look in the modulation
circuit he
can determine on his own what needs to be done in the radio. D-110
will at
least give him a starting point which is more than your whining would
have
done!
Train

Subj: Re: [cbtrick] Limiter mod needed for TRC446
Date: 4/12/2002 12:18:25 AM Eastern Daylight Time
From: Bill Eitner kd6tas@netzero.net

The guy with that radio is travelling a long way Train in
the hopes that I can make him get out. That's why
I posted this. I told him that I can find the modulation
limiter and the choke that is front of the RF driver
collector (a spot similar to the popular JP36). If
I can't, I'm going to look like a shithead. That's

why I asked. I don't ask questions just out of
curiosity--I ask them because customers are
depending on me.

The first thing I'm going to do when that customer
comes in is atempt to find and remove D110.
After that I'll trace back from the driver collector
and find the choke that I can lift one end of and
add the cap and resistor that makes up the JP36
mod. Then I'll sell the guy a nice amp. That's
how this business works.

See what I mean? Train jumps in as the defender of the "clip and rip"
school of technology. Note that the bottom line is that Bill Eitner
wants to sell an amp. This is, of course, after he butchers the poor
guy's radio.

Randrew, let's get it straight. First, while I admire the 'best defense is a good offense' theory, you seem to have it confused with the old chess axiom, 'when in danger, when in doubt, run in circles, scream and shout'. You have this strange idea and beat it beyond recognition adding a healthy dose of full-contact rhetoric that tends to suggest the following:

1. You are a child. If it makes you feel taller standing on someone's neck, go for it but expect a spanking.

2. You are a child. This whole thing started as a way to show us your hardware -- as if hardware should bring some sort of respect. It doesn't. Much like a man of my age (58 if you have not already looked it up) driving a Corvette, having a lifer Tech with an HF transceiver opened up is far more likely to cause derision than respect. Tee hee, giggle.

3. You are a child. That unmitigated bullshit about code and family responsibilities when you spend more time on the compooter than code would take is juvenile whimpering and nothing else. Read to the kids, read a newspaper in their presence, and take the time to have a romping good imagination and giggle session; fiddling on Usenet looking for ego boo does not a blessed thing for them.

4. You are a child. Your rhetorical style is right out of the junior hi training manual, ask questions to which you care not a whit for the answer, lay down a barrage of non sequitor, and top it with a lot of personal invective. The jr hi kids I work with are better at it tho.

5. You are a child. With an attention span to match. Make a plan and carry it out for once: stick to a point, get your code up to barely half of what the Boy Scouts wanted for a merit badge, raise some competant and

happy kids, I don't care; just do it already.

Back in my football coaching days I had occasion to have a talk with a shrink (he happened to be my bridge partner for a sectional tournament), asked about the 13-year olds I was working with and he told me the diff between an adult male and a child lay in three areas:
a. Experience which one gains by going outside the safe zone just a bit.
b. Identity separate from a herd which given the equipment thing I suspect you haven't learned.
c. The idea that long-term goals require short term sacrifice without which you will be a really crummy daddy. Your call on that one.

Out here in fly-over country where the West is not quite dead we put it slightly differently. A Man does what he says he will do, cleans up his own mess, and shoots his own horses. The latter is illustrated by the cowboy whose favorite mare just broke her leg in a gopher hole: the cowboy must retain enough sense to remove the saddle first, then haul out his .45 and drill the horse right between the ears because it is simply the right thing to do, and take the long walk to the bunkhouse in boots that were definitely not made for walking without whining about it.

And never kneel wearing spurs -- it's the Code of the West.

Dick, NBK

Honest question -- Honest answer.

1. Recreation

2. A tendency to be kind to dumb animals and mention that it is no
substitute for a decent antenna system nor does it do as much as some
believe it does.

3. Share a bit of experience about some of the pitfalls of buying things
made in garages for the basic purpose of sheep-shearing. When Red the
Tech down at Happy Larry's Truck Stop, Funeral Parlor, Wedding Chapel, and
Emporium of CB Delights has a head going up and down simple human decency
requires one to sing counterpoint.

Amps are not my pet peeve, that is reserved for idiots who cut limiters
and disable harmonic traps to get more watts on a crooked output meter.
Amps are merely ill-advised, that kind of surgery is criminal stupidity.

OK?

Dick N&#65533;BK

In that vain:
FS: Galaxy 250 blue face low drive amp. Used once, perfect physical and operating cond'x. Three power settings and pre-amp. So not to drive certain posters crazy, I'll say any reasonable offers?Someone's going to ask, "what's reasonable"? Make me an off and I'll let you know if it's reasonable or not.

Why do people want to prevent murder, robbery, rape, and war when we all know those things are going to happen anyway? Why do artists paint pictures when there is already plenty of art available? Why does some store-bought bread shrink in the toaster? Wake up and smell the insulation burning.

Poor Randy....so desperate for a victory...grasping at mere straws.
Allow me to clarify. Sparky is an engineer. I am a radio hobbyist. To
him, it (radio) is a profession. To me it (radio) is a hobby.

The Junior High Rhetoric Manual prohibits answering a question with a
question and ad hominem attacks in the same sentence. Try this in an
adult manner and you might get an answer.

Why do people who are for illegal amps and such even post here? no one is
gonna stop complaining even though you assholes keep using them. so why even
use them?

Sorry Steve I found out about you long ago medina oh. Oh so we are back on how your idle threat have not been carried out. Why don't you and sd jonsie get togther you can threaten everyone and then deny it. LOL you are a blast Moped. Who has threatened you? You are the guy who threatens people remember.

You keyclowns get spooked and suspicious so easily.

>What's your call sign,'Aaron'?

I wouldn't tell you (a) because you didn't ask nicely (b) you'd
probably try and hire someone to harm and harass the owner of whatever
callsign I gave you (c) because you didn't offer anything in return.

>Why don't you post in any other radio NG, please answer honestly.

The answer is because you keyclowns KEEP ADDRESSING POSTS TO ME. You
must want me here very badly as evidenced by all the questions,
comments, and generalized hubbub aimed at me daily.

>I label YOU a trouble maker,beacuse of your behavior,it's all
>I have to go by.

I speak my mind. You have a problem with that?

Hey you classless twit. To answer this I would first have to grant the validity of your observation. So this is a variation on the ancient and honorable "When did you stop beating your wife?"

It also is something of a counter-attack designed to obfuscate. Answer with a question.

Your style would have to be shaped up a lot to qualify as motley but the bigger issue is that it assumes I just fell off the turnip truck. I might react to having my intelligence insulted but this hardly qualifies as an insult, kind of a saliva-laden raspberry at best.

Practice, junior, practice. Make a plan and execute it; knock off the firing from the lip.

Dick NBK

Peter Pan Syndrome: so named from the title character in Peter Pan, "I'll never grow up, I'll never grow up.

Where? Douche Bag,Virginia I hear it is a decent town.

966. Wierd Hy-gain beam question

Newsgroup: rec.radio.cb
Date: 2002-04-13 02:41:25 UTC
From: ~Fuzzylogic~ <fuzzy@usenet.com>
Message-ID: <ubf6mlltojkh68@corp.supernews.com>
Source record: 120831

I have this old Hygain Beam, it looks alot like the
old PDL 2 & the Wilson Y-quad, but this one of mine
has vert & horz full wave loops on one end of the
short boom & reflector on the other....front/back
rejection is almost non-existant, would like to play
around with it, maybe find the paperwork or something
-get it to work the way a beam should work!

Does anyone know the model name or number of this
old oddball beam??

Any Help appreciated, Thanks in advance!!

~Fuzzylogic~

Im looking for some LED's that can replace the ones on my President George which i decided to keep instead of selling, thanks to all who replied though :) Decided i could part with it :) What i would like to do is change the LED's in this radio to a different color. I have a source for the regular LED's, but this radio has like 20 SMD LED's, 10 green and 10 amber. the part numbers are as follows, but im looking for some different colors like Blue, white, anythnig other than whats in it now, even a better green.

Parts: CL140D-CD-T & CL140YG-X-T

Thank you
Jeff

I have a neighbor just like that Carlos dude. Can't keep his nose out of anyone else's business. Whining, crying, all the damn time. Complains if you, or any visitors, dare to park in front of his house. Spoils his curb "appeal". When my kids were small, we had a nice swing set in the backyard. My neighbor actually came over one day and complained to me that my kids were looking into his yard and ruining his privacy, and would I please move the set at least ten more feet away from the fence. I just stood in the doorway and stared at him until he went away.

Reminds me of the silly bunch of nose-pickers in here. If you told me that was really Aaron's site I would believe you. :-)

Hello Jeff:

Yeah good posting Moparlohic.....

Back a few years ago I ran into the same trouble with the neighbors, just up from me in a Terraced type planned community, track home type ah thing.

They complained about my Moonraker 4 element Beam Antenna, and Sigma 4. Stating that I erected a commercial radio site, and the deed restrictions did not allow any antennas to be put up.

They also complained about all my racing tires in the back yard, they said there was 32 racing tires. But really only 4 of them where Dune Buggy tires I ran on my Bronco for when we was at Pismo Beach rat racin in the sand.

Then came the city inspectors looking for evidence that I was running a business out of my house. They did see all the tires and such, but in order for the neighbors to see all 32 tires ya had to climb up on the fence and look over.

I had the police make a few visits to my house at different times and such, said they had complaints of loud music and a party going on. But one of the cops was a good ol friend that I use to go Dunning with at Pismo Beach. He said that they where getting all kinds of complaints from my neighbors just up the Terrace from me, and that everytime they checked me out for loud noises and such the house was quiet with all the lights out, in the middle of the night.

So I get the idea if I am gonna take the heat for a party, why not have one, with all the local CB'ers and a few of the Bikers that I know.

The partys goes as planned, but we keep the music down to a dull roar. Mostly everyone wants to get on my base radio that the Moonraker 4 is overlooking the San Fernando Valley. The General Radiotelephone Super MC-11A feeding a Maverick 250 dominates the air waves. Should have sold base station talkin tickets.

I invited all the neighbors to my BBQ and pool party, even the tree huggin ones that keep turnin me in for everything. Come to find out all the other neighbors where being turned in for everything else including one guy who had the Los Angles City Building and Safety out at his house, saying his flag pole was supposed to be a Blimp Docking Station. Well all the wild and wrong complaints finnialy lost the ear of the local authorities.

The value of the property went sky high due to its view location, and I was offered way too much money for the house so I bought another house, not to far away.

But thru all the hoo raw, I had to hire a attorney, and pay him several hundred dollars. I beat all the neighbors complaints, even the one that said I put a fence on his and HER property, that I didn't put up.

But the all time classic was when Stump Jumper showed up with his old 1965 Bus, full of kids and his wife. They dressed up like Hillbillies. Stumpy with his overhauls and Black pointed hat, and Corn Squeezins Jug, Miss Stumpy (they never got married) Caren was her name, had on a old womens dress that was torn and well worn. Stumpy was yellin "We is here Boys, start gettin fire wood together"

We could all see the neighbors looking over the fence from high above on the terraced hill. I am sure they wanted to commit suicide, looking at Stumpy, Caren, all the kids, and that old heap larger than life 1965 Bus. And I am sure the duel 102 inch whip antennas added that distink flavor of "U know theres something wrong with these here folks" type of felling.

But of course Stumpy just couldn't leave it alone, by just showin up and stirring a little. He walks over to the back end of the Bus and pulls out a 4 inch Dryer Exhaust Hose from the bottom of the bus, and puts the 4 inch hose coming from the bus to the street, making the impression that this was the Bus's waste and water drainage hose.

In the time it took to make a pot of coffee and shot the bull, we had the LAPD at my house, which was pretty good in them days. The officers looking over the exhaust hose laying in the street, near the curb, and seeing that it was only chicken wired to the bottom of the Bus for effect started to laugh under their breath. We got told by Johny the cop, that he never seen such stirring goings on's and for us to get the bus outta here in a hour or so.

A good time was had by all, except 4 the nosey neighbors.

Super MC-11A $239.99, Maverick 250 won at the CB Break, tickets cost $20, Mookraker 4, Ham 4 Rotor, 2ea 100 foot runs of RG213 Coax, and 60 foot tower $789.00 dollars.....

Ah, ... all the memories and friendship of all the guys and gals in the CB club, and all the antics..... priceless!

987. Re: Wierd Hy-gain beam question

Newsgroup: rec.radio.cb
Date: 2002-04-13 10:34:49 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3CB809C9.DBAD5C9C@qnet.com>
Source record: 120857

Hello Fuzzylogic:

Hy-Gain Made a few Quad Antennas, two and four elements.

The two element was called the "Eliminator II" and the four element was called the Big Gun II. But they may have also had a two element quad antenna called a Big Gun.

Contact Hy-Gain, now owned by MFJ at:
http://www.hy-gain.com/hy-gain/index.php

They will sell you a copy of the older assembly manuals for 5 dollars American. Tell them as much as you can, they will copy it from a original, but will be readable. Be nice to these guys on the phone there not making any money off making copies of the older antennas.

When any beam antenna has no directional workings something is terribly wrong.

Good luck. I have the assembly instructions for the Big Gun II, but not for the Eliminator II or Big Gun antennas.

I think your info must date back to the days when your father was a brummy.

It is not against the law to believe that people will not follow every law,
no matter how dumb. The police use that very thought process, which is
why they stop certain types of people to search them or their vehicle. They
assume that they will have broken some law.

I have made it clear that I run a legal CB, through a legal antenna... and I
do not run an amp.
So, how do my thoughts get me put away, please tell us all.

I know, standard reply when no real answer is available...
>> sod off.

Brainbuster.

>
> Woo hoo! I seem to have touched a nerve here. "Me thinks thou dost
> protesteth too much".
==

Gadzooks Voobster. Me thinks thou seemeth to know far more than I
about brummy land.
Forsooth, thou hast a hard on for brummies. Verily, it is more vast than
thy hard on for me.
Yea, me thinks thine info is rather olde.

So, I have a better story...

It is well known that the Vikings went invading the areas now known as
the UK, raping and pillaging as they went. Some landed in Scotland, some
on the East coast of Ireland... while others will have landed across the
water in the West of England.
This explains the way Scotland is known for it's roughnecks, Irelant for it's
terrorists... and the brumies for being "the shame of all europe" with "scum,
slags and perverts".

I left out "nil of the north", because I know where Birmingham is... and it
is not "the north", it is the "West Midlands".
Anyhow, back to the story...

The Vikings, having moved to pastures greener (well they were until they
ruined them), ended up sh@gging the Taliban types that also inhabit
such areas... and so the next generation of half breed "Vikings" were born.
Having filled the area with criminals, and wishing to dispose with this
rather
sad part of their family history, some moved to America.
However, it was not that easy... old habits die hard. Soon they were causing
trouble on that side of the pond... terrorising people wherever they could.
And before long, they were sh@gging other half breeds... Taliban/German mix.

Brainbuster.

So, you got Georgina chasin' your ass... I have Boobner after mine.

Not much to choose 'tween the two... just remember, if some scrawny,
nerdy chap drops a dime near you... DO NOT BEND TO PICK IT UP!!!!

Brainbuster.

Give that man a ceegar, 6 kewpie dolls, and a 3-lb wedge of Fatchamatta's Macaroni Cheese. The effect will more than likely be the same but kind of like CW, it's more fun to do it manually than to let machines have all the fun.

Hi Richard,
Yes, while it is a full-filling feeling to just delete
the post and never read it. I find it much more amusing
to click on the group and watch it say 128 posts, then
the count down to 85 posts. Much more entertaining to
know that some 43 useless posts from either my little
buddy, Voobner or Sparky go straight into never-never
land.

Look me upon qrz.com, 4 Dec 43. Pop Warner was a fair to decent coach but
was one of the greatest self-promoters of all time, right up there with
Frank Lloyd Wright. Never knew Pop personally. The game is so time
simple because one of the big coach's day job after the 1906 rule fixes
was with a clock factory. Doing well by doing good.

You're a piker, Sharkie. I might get 55 out of 128. But my criteria for bozo-flushing are really only two: insanity and incivility. Randy's childishness while grounds for ignoring are really more fun to let play out depending on how I feel on a given day. I am here purely for recreation so I do what makes me happy.

Hey Landshark,

Do you know how to get CompuServe to do this?

I run with two front-end programs, the Bright Mail from ATT lets me blast spam easier than Bozo*Flush so I use it to get rid of Korean crap. Mad Boris is at work as we speak. But OE5 has a few tools for the purpose as well.

Under Message you can either block a sender or create a rule. The Block Sender function, why the pests change names periodically, is pretty straightforward. The Make Rule allows you to flush entire domains such as the well-known public urinals and certain words using the message as a template.

Have fun with the Electric Machete and hack your way thru the jungle.

Cool. But, you know what? I've never said the Icom is actually used on 11
meters. It was simply a question. Of course, I knew what the response would
be. I actually bought the damn thing with 2m SSB in mind, and the same with
6m, not to mention a damn good general coverage receiver. If and when I
decide the code is a requirement for me to be happy, I'll not have to
purchase another radio. Right now, all it has on the HF antenna connector is
a random piece of wire. Works great to listen to Hal Turner, as long as the
noise level is low.

Right along here, you should hear Richard's 58 year old brain(which for some
reason gives him the misguided belief that he's some sort of antique) begin

whirring like a hard drive with a couple of bad platters.

1016. OT...Joe's Headache

Newsgroup: rec.radio.cb
Date: 2002-04-13 17:12:00 UTC
From: Randy <rchapman8@houston.rr.com>
Message-ID: <AFZt8.57531$ud6.1961387@typhoon.austin.rr.com>
Source record: 120880

Joe's Headache

Joe, a successful lawyer, was getting older and he was increasingly being hampered by incredible headaches. When his career and love life started to suffer, he sought medical help. After being referred from one specialist to another, he finally came across an old country doctor who solved the problem. "The good news is I can cure your headaches. The bad news is that it will require castration. You have a very rare condition which causes your
testicles to press up against the base of your spine and the pressure creates one hell of a headache. The only way to relieve the pressure is to remove the testicles."

Joe was shocked and depressed. He wondered if he would have anything for which to live. He couldn't concentrate long enough to answer, but decided he had no choice but to go under the knife.

When he left the hospital he was without a headache for the first time in 20 years, but he felt like he was missing an important part of himself. As he walked down the street, he realized that he felt like a different person. He could make a new beginning and live a new life. He saw a men's clothing store and thought, "That's what I need -- a new suit." He entered the shop and told the salesman, "I'd like a new suit."

The elderly tailor eyed him briefly and said, "Let's see ... size 44 long."

Joe laughed, "That's right, how did you know?"
"Been in the business 60 years!"

Joe tried on the suit. It fit perfectly. As Joe admired himself in the mirror, the salesman asked, "How about a new shirt?"

Joe thought for a moment and then said, "Sure..." The salesman eyed Joe and said, "Let's see ... 34 sleeve and ... 16 and a half neck."

Joe was surprised, "That's right, how did you know?"
"Been in the business 60 years!"

Joe tried on the shirt and it fit perfectly. As Joe adjusted the collar in the mirror, the salesman asked, "How about new shoes?"

Joe was on a roll and said, "Sure ..."
The salesman eyed Joe's feet and said, "Let's see... 9-1/2...E."

Joe was astonished, "That's right, how did you know?"
"Been in the business 60 years!"

Joe tried on the shoes and they fit perfectly. Joe walked comfortably around the shop and the salesman asked, "How about some new underwear?"

Joe thought for a second and said, "Sure..." The salesman stepped back, eyed Joe's waist and said, "Let's see ... size 36."

Joe laughed, "Ah ha! I got you! I've worn size 34 since I was 18 years old."

The salesman shook his head, "You can't wear a size 34. It will press your testicles up against the base of your spine and give you one hell of a headache."

Only once and it was due to ignorance lol.. I left it on for roughly a week, im guessing it lasted just right up till the moment i got home because when i walked into the room it was filled with smoke and the power supply was making a nasty whineing noise lol. Other than that, i've had one other for roughly 8 years now without any problems from it. Not my first choice for a power supply, but its not a bad choice in my opinion after seeing how this oine has lasted.

Nah Dick, you're the one with all the Old West euphemisms, almost as if you believe you lived them. Hell, I've got siblings older than you, that act much more their ages. Remember the Beatles? Much closer to your age than Doc Holiday. As far as any hole is concerned, I really don't give a sneeze as to what you believe...I'm not digging out of anything. You're getting "BORING" and predictable. I may tire of smacking you in the forehead shortly....I've never been one to pick on those with no defense.

Bert, I've got a Pyramid 36KX(32 constant, 35 surge), and I've really not been happy with it. With even 50 watts out on FM, for any length of time, the sink gets incredibly hot. On SSB at 100 watts, it does OK, although it still gets warmer than I'd like it to be. I've got an old(around 20 years) 20 amp Tripp-Lite that has no fan, and seems to work much more efficiently, or at least does not get as hot.

Diversion? Whatever Dick. Anyway, I've got to leave you now, so feel free to take a nap if the desire so strikes you. Little League baseball calls. Perfect weather here too...mid 70's, flowers are blooming, trees are nearly all leaved out...what a day!

Take care, and enjoy your four walls!

Hi Bert,
I've had three. Presently have a PS-36KX. No problems with any of them.

That being said, I got a new one for a buddy, a 25 amp model, and it's been nothing but trouble. Out of the box the fan would not work. Sent it back and when it was fixed and returned the overload protection circuit kept going off. Sent it back and when it was returned the fan didn't work again. All of these repairs were under warrenty. After the last time, a new unit was requested and they did supply one. There has been no problems with it so far. It's been 6 months or so with constant use so I think this is a good one. I must say that the unit was never used with anything more than an Export Model (2950DX) radio drawing current. No linears, etc.

It's good to see that you are finally taking my advice and getting
some fresh air. Maybe after you ventilate your trailer, shake the
froth from your mouth, and relax enough to breathe again, the oxygen
might flow back into your brain. And then you can think of some
creative excuses for your contradiction.

>However, it was not that easy... old habits die hard. Soon they were causing
>trouble on that side of the pond... terrorising people wherever they could.
>And before long, they were sh@gging other half breeds...
Taliban/German mix.

ZZZzzzzzz...ZZT! Yawn. Sorry. I dozed off. I was just thinking about Vikings. History characterizes them as bold explorers and brave warriors. Say the word "Viking" and people conjure up images of Leif Ericson or Eric The Red...big, brawny, brainy guys with the guts and the smarts to navigate halfway around the world. Conversely, say the word "brummie" and you think of a bunch of dumb poofters sitting on their fat arses in front of the telly stuffing their faces with pasties and complaining about the rain. Quite a contrast it is, indeed.

Fair question! Wrote a song about it. Like to hear it? Here it goes...

From what I've read on the newsgroup, the guys you just mentioned get on r.r.cb and discuss amps, freebanding, and such. Illegal? Absolutely! But not to talk about. Nobody forces our friend to join in any thread that pertains to a topic with which he does not agree with. He jumps in with both feet...for what purpose? Solely to annoy, and he's pretty much admitted as much.

Now of course there is the freedom of speech issue, right? WRONG, nobody forced him to join the discussion. So when he's berated by those you've mentioned...is that what "they are all here for?" Nope, they're just reacting to an "annoying" troll. They are "the equal and opposite reaction" to the troll...gee, where have I heard that explanation before. Too funny!

Do you actually have a retail CB shop where people can come to or a web
page type shop?

Jeff don't be a naive ass this NG has had its share of trolls from day one
some of the people I named were engaged in nothing but trouble making posts
arguements and such long before aaron voobner reared his head in this group.
Your stupid to say they only respond to being attacked it shows your
pedigree
and your willingness to be collared in the pound with your comrades

You be a man Jeff and admit it has went on or do I have to stuff some old
posts down your throat to show how much of a man I am. .

What are YOU dreamin' of, Landshark? I think we know. Read on!

-Aaron-

========== From the Google Archives==========

Here's a post to rec.radio.cb in July of 1999. Some of you may
remember it.
Landshark posted quite regularly to the group. Just do a search at
Google
and you will find lots of his posts. There's no doubt it is the same
"Landshark" we all know and love. Here's just one example:

==========

From: s3sharkman (s3sharkman@HOTMAIL.COM)
Re: Where are all the big boxes?
Newsgroups: rec.radio.cb
Date: 1999/07/16

Well dana my man (or woman) I know the every mighty
F.C.C. won't mess with me. I've been running power
since the early 70's, and never had any problem.
Plus it's gonna be kinda hard to figure which house
it is, considering that my 3 immediate neighbors all
have antennas.
My original post really had nothing to do with
the general population, it was about guys like
Dennis, Sean, Toll-free, Painkiller, etc., etc.,
Hell even the Professor doesn't come out
anymore to throw in his one liners.
I just hope that all the wanna-be lawyers die
the death of brain cancer or some slow debilitating
disease.

s3sharkman

Randy, he went with the extra class designator something you too can do if
you ever learn the code, I figure with all this wasted time posting to the
group you should have had at least 7 o 8 letters down pat. But I forgot your
a real busy guy.

Putz!

Trolls are one thing. Crying little whiney girls that hate it when others have fun are another altogether. Do you really think it does any good to anyone to insist on repeating these attacks, over and over again, even when it's clear that no one is listening?

You and A-Ron were meant for each other. :-)

> some of the people I named were engaged in nothing but trouble making
posts
> arguements and such long before aaron voobner reared his head in this
group.

Bullshit. And you know it.

> Your stupid to say they only respond to being attacked it shows your

> and your willingness to be collared in the pound with your comrades

My comrades? Please. I simply get tired of hearing you and others cry and whine without end. It's tiring and non-productive.

>

> posts down your throat to show how much of a man I am.

Never happen girlie. I already know what kind of a woman you are and I for one need no more evidence than has already been put forth. You have always been and you will always be a whining, complaining, split-tailed bitch.

Learn to live with it.

Jeff

Hi Randy,

My father is NYPD ret. and served his longest tour at the 78 Pct. in Park Slope, Brooklyn. Well, at a shade over 6' 4", dad was the tallest officer in the house. (Pct.) So his friends bestowed the nickname 'Watusi' on him after the West African tribesman who often grew over 7' tall.

When my father saw me remove the telescoping antenna from my Christmas gift, a 300mW CB h/t, and solder in a home-brew dipole in it's place, he decided to buy me my first 40 ch. CB. He often took me to the airport (JFK) and tuned in the tower freqs as well as introducing me to the world of SWLing. (His passion.) So in many ways, dad is kinda responsible for introducing me to radio. My callsign is a small tribute to him. BTW, dad's alive and well to appreciate it...and can occasionally be heard talking to his son on ch. 39 usb on Sunday mornings. Don't wait until it's too late to say thanks in whatever way you can, I didn't. Take it easy. :-)

You are certainly listening and replying, as well as your same state homo
buddy Landshark.

>
> You and A-Ron were meant for each other. :-)

You and Landshark were meant for each other.

> Bullshit. And you know it.

Yes, for you to even imply there wasn't is total bullshit, and you know it.

> My comrades? Please. I simply get tired of hearing you and others cry and
> whine without end. It's tiring and non-productive.

Then by all means snappy turn it tight to the right who is forcing you to
read or reply . Let me answer that for "YOU"

> Never happen girlie.

I know Jeff asking you to act like a man will never happen you don't have it
in you, well maybe you already have your friends with Landshark.

>I already know what kind of a woman you are and I for
> one need no more evidence than has already been put forth.

Believe everything you read?

> Learn to live with it.

Thats what I say Jeff stop your whining and bitchin and crying no one is
listening, learn to live with it.

Be sure to tell me how long it takes you to scrub the old one from memory;
took me less than a week.

It is a nice CW call as well. You might be surprised at how many finally
get the Watusi thing when your QSL has hung on the wall a few years or a
non-ham sees it :-)

Good job, Bert.

SINGLE BLACK FEMALE... Seeks male companionship, ethnicity unimportant.
I'm a single good looking girl who LOVES to play. I love long walks in the
woods, riding in your pickup truck, hunting, fishing trips, cozy winter
nights lying by the fire. Candlelight dinners
will have me eating out of your hand. Rub me the right way and watch me
respond. I'll be at the front door when you get home from work, wearing
only what nature gave me. Kiss me and I'm yours. Call xxx-xxxx and ask
for
Daisy."

Callers found themselves talking to the local Humane Society
about an
eight-week-old black Lab.

Actually Mr. Nutz, I am rather busy. Had a kid's soccer game this morning, baseball game this afternoon, and still had time to read your drivel. I can do lots around the house and other places, and still have time to read your posts and reply to you. You really should not gauge another person's typing speed and comprehension ability by your own.

>PLEASE E-MAIL ME DIRECT
>THANK
>STEVE

Not meant as a flame, but that's an awfully expensive way to load a coil. Similarly, the oil-filled hi-power antennas offer the same opportunity. After spending all that hard-earned dough of a 10kW "competition" amp, what do you use it for? To heat a cup of oil?

Buy a 1/4-wave whip and get more performance than any "coily" will give you. Take care and 73.

Love it Bert! Would never have guessed it was phonetic! Maybe you should put
the word Watusi in parenthesis after the call...for those of us with slow
minds.

You have a point about saying thanks...you never know. My father was taken
from me around the time I was 20, and I do regret him not knowing how much
he meant to me.

Take care man,
Randy

Some of you who remember these people (like Paul Lynde and Charlie Weaver) will appreciate this more than others....but the humor is still wonderful.

These great questions and answers are from the days when game show responses were spontaneous and clever, not scripted and dull as they are now. Peter Marshall was the host asking the questions, of course.

Q. Do female frogs croak?
A. Paul Lynde: If you hold their little heads under water long enough.

Q. If you're going to make a parachute jump, at least how high should you be?
A. Charley Weaver: Three days of steady drinking should do it.

Q. True or False, a pea can last as long as 5,000 years.
A. George Gobel: Boy it sure seems that way sometimes.

Q. You've been having trouble going to sleep. Are you probably a man or a woman?
A. Don Knotts: That's what's been keeping me awake.

Q. According to Cosmo, if you meet a stranger at a party and you think he's attractive, is it okay to come out and ask him if he's married?
A. Rose Marie: No, wait until morning.

Q. Which of your five senses tends to diminish as you get older?
A. Charley Weaver: My sense of decency.

Q. In Hawaiian, does it take more than three words to say "I Love You"?
A. Vincent Price: No, you can say it with a pineapple and a twenty.

Q. What are "Do It", "I Can Help", and "I Can't Get Enough"?
A. George Gobel: I don't know, but it's coming from the next apartment.

Q. As you grow older, do you tend to gesture more or less with your hands while talking?
A. Rose Marie: You ask me one more growing old question Peter, and I'll give you a gesture you'll never forget.

Q. Paul, why do Hell's Angels wear leather?
A. Because chiffon wrinkles too easily.

Q. Charley, you've just decided to grow strawberries. Are you going to get any during the first year?
A. Of course not, I'm too busy growing strawberries.

Q. In bowling, what's a perfect score?
A. Rose Marie: Ralph, the pin boy.

Q. It is considered in bad taste to discuss two subjects at nudist camps. One is politics, what is the other?
A. Paul Lynde: Tape measures.

Q. During a tornado, are you safer in the bedroom or in the closet?
A. Rose Marie: Unfortunately Peter, I'm always safe in the bedroom.

Q. Can boys join the Camp Fire Girls?
A. Marty Allen: Only after lights out.

Q. When you pat a dog on its head he will wag his tail. What will a goose do?
A. Paul Lynde: Make him bark?

Q. If you were pregnant for two years, what would you give birth to?
A. Paul Lynde: Whatever it is, it would never be afraid of the dark.

Q. According to Ann Landers, is their anything wrong with getting into the habit of kissing a lot of people?
A. Charley Weaver: It got me out of the army.

Q. While visiting China, your tour guide starts shouting "Poo! Poo! Poo!," what does this mean?
A. George Gobel: Cattle crossing.

Q. It is the most abused and neglected part of your body, what is it?
A. Paul Lynde: Mine may be abused but it certainly isn't neglected.

Q. Back in the old days, when Great Grandpa put horseradish on his head, what was he trying to do?
A. George Gobel: Get it in his mouth.

Q. Who stays pregnant for a longer period of time, your wife or your elephant?
A. Paul Lynde: Who told you about my elephant?

Q. When a couple have a baby, who is responsible for its sex?
A. Charley Weaver: I'll lend him the car, the rest is up to him.

Q. Jackie Gleason recently revealed that he firmly believes in them and has actually seen them on at least two occasions. What are they?
A. Charley Weaver: His feet.

Hi Bert,
Not the best of quality, but cheap, working supply.
I'd recommend Astrons, I've got three, 25 35 & 75
amp models and all work real well.

You got some whacky-assed dreams goin on over there, girl. And tell me, why
would you want to go up in my stinky 'ol ass anyway? You one of them felcher
boys?

No, it was a play on your sorry little screen name you homo.

Jeff when you
> grow up then come back to the group take some notes from sd jones at least
> he talks tough ...

This class is easy, girl. No notes needed to mess with the likes of you.

Got Diploma? :-)

We approach it differently. As I noted, insanity and incivility are the major ones but I also blow out entire domains and certain words. Potty mouthing gets it, not because I haven't heard the words before but because it indicates an inability to express a thought or a thought not worth expressing. I agree with Tom Lehrer, people who can't communicate should at least have the decency to shut up.

It is all recreational to me so I tend to suit myself; if it continues to piss me off, no sense in keeping it around. If one of the public urinal sites continues to offend, out it goes. Why bother with a mailbox if every head case in creation uses it; life is too short to read 100 posts to find two worth reading.

I suspect our lists are similar but not exact; I don't have nearly the conflict with Sparky you seem to have but the differences are in such places as Hotmail where I just cannot stand the crappola.

Onward and Upward

Fair enough Richard, I'm sure your
list is equal too. Google is nothing more
than a sewer pipe spewing bs on the
newsgroups. AOL isn't much better,
they allow this bs, I'm sure it's strictly
because of money only why they don't
close more accounts than they do.

It's late, I'm getting up early for
a ride (estimated 78 degrees)

Man oh man alive..... George are you
really gay? You mentioned me more than three
times and I have never even made a post in
this thread. All you can do is call people names
and accuse them of being and doing homosexual
sex acts, you call that a life? Remember, unless
you change your screen nic or someone quotes
you I won't see you, so have at it with your ranting...

LOL!!!! this guy really needs some help.....

Some supplies actually run the hottest when they are lightly loaded. Put
a steady heavy load on them and they run much cooler.

I don't recall why this is the case. I am not a power supply person.

A heavy load can reduce the unfiltered input voltage because the
transformer doesn't have an infinite output impedance. When that
happens the voltage across the regulator drops to compensate. If the
drop across the regulator is initially high, a heavy load can reduce
it so far that it actually dissipates less power than under a lighter
load.

1103. Re: Pyramid Power Supplies?

Newsgroup: rec.radio.cb

Source record: 121018

Better explained with an example:

Given a 12VDC supply using a 24V transformer (not uncommon with the cheaper power supplies). For the sake of argument, the unfiltered voltage is 22VDC when the current is 5A, but drops to 13VDC @ 20A. So that means under 5A the voltage drop across the regulator is 10VDC, and the dissipation is 10V * 5A = 50W (real watts, not Bird watts). But at 20A the voltage drop is only 1VDC, so the regulator's dissipation is 1V * 20A = 20W, which is 30W less than when the supply is spurting only 5A.

I'm looking for a new rig and have a few features that are a must. Power doesn't matter that much to me. 4watts AM and 12 SSB is plenty for me. A frequency counter is not needed but would be an added plus if it doesn't take the price up too much. AM/SSB are a must but CW would be a nice added touch.

I've been looking at the Superstar 3900 but from what I've read it tends to wander off frequency too much. I want something solid enough to have a conversation with someone. Next on the list is the Magnum 257 or Prostar 400 clone. I haven't heard too much bad about them other than having to be modded for the 11meter CB band. I'd prefer not to have to take the radio to a tech to be modded or "re-aligned" like people say the 3900 needs.

Basicly which model radio am I looking at that will cover these needs for less than $200? It's going to be used as a base with a 15amp P/S and Antron-99 ant.

Solid SSB performance is what I'm looking for. Talking skip is too fun and the radio I have now is screwed up on SSB.

So, needs are... AM/SSB, FM is not needed, Power doesn't matter, CW would be nice, a frequency counter is not required, something I don't have to bring to a tech to align or peak/modify.

Any comments or suggestions are welcome.

-Jackson.

Bert,
I have # Pyramid 52's at my bench for "high power" projects. These give me enough to power up a 8 pill on the bench and were bought by me as refurbs from A-1 about 5-6 years ago. Other than one of them having a fan bearing go bad they have been trouble free. I like to think of a refurb as "proven and tested"!

Do you primarily intend to operate on 11 meters? If so, I'd probably
pick up a good Uniden Grant XL. They're on E-bay everywhere.

BTW, how much CW do you figure on working on 11 meters?

Mark this is not meant as a flame either but how would you explain the times when two cars have been at the line and the coil beats the 1/4 wave with a similar amp? nothing is a given in the real world including that a 1/4 whip will beat a coil everytime. the loaded antennas have the advantage of being able to mount higher and have a better 360 degree view around the car. i think this advantage alone will make a good loaded antenna(as long as its resonably sized) at least eqaul to a 1/4 whip if not better at most times and especially while travelling at highway speeds.

Nebo, at least you admit I did bring up a Fag's. Landshark. the truth
hurts my man if I called you a drug addict would that mean I am preoccupied
with drugs ? No It is calling a spade a spade. What do you call a homo in La
marque? Tim, If a guy asked you for sex what would you call him ? Do you
like fags? I certainly don't especially limp wristed ones from Freemont Ca.
I hear that place is second on the list for aids related cases any truth to
it?

1128. Motorola T6220 FRS radio

Newsgroup: rec.radio.cb
Date: 2002-04-14 15:13:24 UTC

Source record: 121043

I want to use a Motorola FRS type radio when on holiday with my family in the US. I live in the UK and the model here is called T6222 and has 8 channels.
Does anyone know a software hack to turn it into a T6220 14 channel US model? They operate on different frequencies but look identical so my guess is it may be posible to convert with the right button press sequence. I know this sort of thing is sometimes possible as it works with my Kenwood radio.

Thanks
David

Not sure I agree with everything here but... the regulator doesn't have
enough source to continue to regulate as efficiently as it did when the
current demand was lower. It doesn't have the "headroom" that it needs to
filter effectively.

A Uniden President 2510 would fit that need nicley.

Again good choice, not as good of feature or quality
as the Uniden, but a good model over all.

Another choice would be Uniden Grant or Cobra 148GTL.
Both are very good rigs and very widely used around the
world.

Hi! Mark,
Were you going to mount that whip square in the
middle of the roof? If so, then I would agree that
it is the best antenna for the value. Otherwise if it's
bumper mounted, the loss of performance is noticeable,
to which a loaded antenna mounted on the roof is
sometimes as good, if not better in performance.

Have a good one,

Landshark

That's funny. My mother actually bought an album (Vinyl baby!) named Watusi because of the nickname. It had a red cover with folks doing the Watusi dance on the front. Sorta looked like a flat-footed (No pun intended, dad.) twist with the arms held out wider.

And what would "your" fair price be?

P.S. I think it's Palomar instead of Palamour.

i know how it spelled, that was copied right out of the HY website . they spelled it wrong.

their price is 89 bucks no matter how you spell it! even if the 150.00 dollars includes shipping you can still get better deals elsewhere. 60.00 dollars is a little much for shipping if you ask me.

1141. Re: Avanti Sigma IV

Newsgroup: rec.radio.cb
Date: 2002-04-14 17:18:22 UTC
From: dinod@deltanet.com
Message-ID: <yRiu8.7220$3z3.690207@newsread1.prod.itd.earthlink.net>
Source record: 120956

I received the following e-mail from the person who designed the Sigma IV...

"Although the antenna is 3/4 wave tall- the bottom quarter does not radiate. It serves as a matching section between the hi end impedance of the half wave radiator and zero ohms at the base. The feed then is tapped up to the 50 Ohm point and the gamma cancels the inductive reactance of the tapping rod. This antenna is electrically equivalent to the popular J poles so commonly seen on VHF/UHF."

Did you know he still makes antennas?! Anyway, back to the subject... The SIGMA IV is physically a 3/4 wave antenna, but ELECTRICALLY a 1/2 wave antenna. This is very interesting as I always felt that my Sigma 5/8 worked better than my Sigma IV! If you measure the length ABOVE the hoop, you will see that it is closer to 1/2 wave (like a J-Pole!).

The fact that the Sigma IV uses a gamma match also means it is not as efficient as a direct fed antenna. Jay can speak more intelligently on this than I.

So what have learned here today? The Sigma 5/8 kicks! The Sigma IV is a real cool looking 1/2 wave antenna. If its not made in the US, it sucks! I am totally excited about Jay's antenna! Whooo Hooo!

Dino

Well besides you being a slapdick what does that have to do with refurbished
powers supplies. Are you at all the manufacturing plants and can say they
don't test the new ones? Just admit it you wanted to be cheap and bought the
cheapest power supplies made refurbished ones at that.

Putz!

Buy only paying about $80 each for these units I think i got a good deal on
them as they still came with full factory warranty. Where would you suggest
buying 50 amp variable voltage supplies at a better price?
You have all the answers.....Let us all know!

jackson,i would look at the galaxy 959. lets compare it to say the nite watch 148.

galaxy 959 nite watch
148
large easy to read meter yes no

3 position tone hi-med-low yes no (2 pos tone)

frequency counter yes no

reads % modulation yes no

high swr warning lite yes no

noise filter (in addition
to anl and noise blanker) yes no

external rf power adj yes no

as you can easily see,the galaxy 959 has more "usable" features than the 148,and at bills 2-way you can get either one for 175.00. the galaxy also offers a 2-year warranty,parts and labor! which would you pick?

elpasogunslinger good luck and good dx-ing!!

Headroom? The regulator only needs enough "headroom" to overcome it's
minimum voltage drop. If the input voltage drops below that threshold
the regulator doesn't work "less efficiently", it doesn't work AT ALL.
The power dissipation is a function of the regulator's voltage drop
AND the conducted current. Voltage and current... hmmm.... sounds like
an impedance thing, don'tcha think?

I wouldn't be doing my job if I didn't mention that amplifiers for CB are ILLEGAL. Selling them (as Train is offering to do) is ILLEGAL. Using them is ILLEGAL, DUMB, and INCONSIDERATE, and adds to the QRM that every other CBer must contend with.

> using them even though you fellas complain about it.......so why even bother??

Because every little bit helps. I'll give you an example.

Joe Newbie was told that he needed an export radio and an amp in order to be heard on CB. He came into the CB newsgroup for advice. Normally he would be offered amps for sale by a bunch of CB outlaws and told to go for it. But this time Joe Newbie noticed people posting an alternative point of view. He read the posts, and discovered that amps and exports are illegal to sell and use, and that the FCC does indeed prosecute. He found out that an amp merely made noise while a better antenna made contacts. He found out that the 'freeband' frequencies were stolen from such agencies as FEMA and the US Forest Service. He also saw the selfish attitudes and the hypocritical responses of the "keyclowns" as they scrambled to squelch the info Joe Newbie was reading. In the end, he decided NOT to use an amp or freeband - for all the right reasons.

Tim then your not comparing apples with apples . I see them all the time on
those keydown pics guys have these 1/4 waves mounted on the roof. But your
claim was a coil will beat a 1/4 wave. Tim this is not meant as a flame
either but as I said what would work better a Laser 8 at 5' off the ground
or a 2 elemnent at 75' off the ground. you didn't quantify mounting on roof
or bumper etc

Tims comment"
"Mark this is not meant as a flame either but how would you explain the
times when two cars have been at the line and the coil beats the 1/4 wave
with a similar amp? "

Train if you think you got a good deal thats all that counts.If you wanna spend your money on refurbished gear so be it. It isn't like your a technican and are fixing peoples radios and amps and need a good reliable supply. But for $320(you said you have 4 of em?) I would have bought a good used 200/250 amp supply. Made by a good company I wouldnt need 4 outlets, and a pile of refurbished equipment, btw there 52 amp models do what 37 amp continous? 52 on peaks? so you have 148 continous and 208 peak? on a good day. Like I said as long as you are happy there is an ass for every seat.

As long as Landshark continues with his sig file Ill provide people with the
truth that he is a limp wristed guy from Cali.I hope you understand Tim.

>
> >What do you call a homo in La
> >marque? Tim, If a guy asked you for sex what would you call him ?
>
> i'd call him in a boat load of trouble

Thats right Tim, you still have some good sense about you

> >Do you
> >like fags?
>
> i do not like fags. as a mater of fact i try to avoid them the best as
possible
> and wont knowingly associate with them whether it be to harrass them or be
> there friend. i'd rather them no place near me.

Well Ill advise, keep away from Landshark. See Tim he chose this he wanted
this he started with me he decided to look up me and see what names I have
posted to the group with then continualy post them, now he is intent on
saying my name with every post. Well all I can say is someone did a look up
on him and saw where he frequented these other groups that was one of his
mistakes. Albeit that was a few years back so he cannot blame Aaron or
anyone else they are all made by the same guy.

>
> >I certainly don't especially limp wristed ones from Freemont Ca.

to
> >it?

> probably right behind san francisco

Yes it is a close second they are not far from each other.

Tim, nice Cobra 2000 btw...

Just remember, 50% of your signal is being WASTED in the form of a carrier. YES...it requires a CARRIER before you can modulate, so you are WASTING OUTPUT POWER! But SIDEBAND on the other hand is MUCH more efficiant than A.M. So....WHY waste watts on A.M. when you can work the WORLD on SSB with LESS power? So, take a peek....join the club.

There has been no problem with no-codes on 10m at all. Most no-codes
don't seem interested in HF. AS long as they make the written tests
harder I have no problem with losing the code test.

From the Google Archives....

==========
Here we have "S3sharkman" looking for some gay shemale action up in
Susanville.
==========

From: S3sharkman@hotmail.com (S3sharkman@hotmail.com)
Subject: Northern Calif.
Newsgroups: alt.personals.transgendered
Date: 1998/11/12

I'm heading up around Susanville Sat, anyone around there????

==========
OK now here's "!lndshark" the Beull S3 rider yakking about his trips
to Susanville. And his name is Mark.
==========

From: !lndshark@ix.netcom.com (!lndshark@ix.netcom.com)
Subject: Re: Radar trap on 35 just south of 92, police galore on
Skyline
Newsgroups: ba.motorcycles
Date: 1998/06/27

Also I was going up to the Northern Sierra, can't remember the
number of the rural highway, but it's the one that goes from Red Bluff
to
Mt lassen and Susanville and beyond.

Mark

==========
Here this same "!lndshark" mentions that there's three antennas in his
neighborhood to confuse the authorities.
==========

From: !lndshark@ix.netcom.com (!lndshark@ix.netcom.com)
Subject: Re: FCC NOTIFIED
Newsgroups: rec.radio.cb
Date: 1998/05/30

One of my neighbors pulled this shit of "I'm getting in
touch with the F.C.C." BULLSHIT. I looked at him and
laughed. There's only an antenna right behind him, next door
to me, right behind me, and three houses down from him.

==========
What a coincidence! There's also 3 antennas in "S3sharkman's"
neighborhood!
==========

From: s3sharkman (s3sharkman@HOTMAIL.COM)
Re: Where are all the big boxes?
Newsgroups: rec.radio.cb
Date: 1999/07/16

Plus it's gonna be kinda hard to figure which house
it is, considering that my 3 immediate neighbors all
have antennas.

==========
It takes no brains at all to see that S3sharkman, !lndshark, and
Landshark (aka Mark Beck) are one and the same. He might as well
admit to his homosexual dabblings and try to move on.
==========

>Tim then your not comparing apples with apples

thats right where comparing the practical use of a loaded cb antenna versus a 1/4 wave whip.

>I see them all the time on
>those keydown pics guys have these 1/4 waves mounted on the roof.

most times when you see a standard 1/4 wave whip on the line its used as part of a mobile beam.

>But your
>claim was a coil will beat a 1/4 wave.

a loaded antenna mounted on top of a four door passanger car will beat a bumper mounted 1/4 whip alot of times

>Tim this is not meant as a flame
>either but as I said what would work better a Laser 8 at 5' off the ground
>or a 2 elemnent at 75' off the ground.

i know a guy that had a 8 element yagi on the group for tuning which stayed on a 4 foot tripod for over a year and he had no problems working the world. what that has do with it comparing to a 2 element 75' off the ground i dont know

> you didn't quantify mounting on roof
>or bumper etc

your right i didnt but you should have assumed that the poster asking the original question was living in the real world like most of us here

To answer the subject line:

Because they're not illegal.

>I thought the FCC sent them a nasty-gram and they put an end to this practice
>(?)

Even nasty-grams don't carry the weight of the law, even when sent by a government agency. HR-2510's & Lincolns don't get yanked as long as they're in the proper category and they're not advertised as covering 11-meters.

I have an antenna that is called an Alpha V58, its kind of a basket case, but it's practically identical to the Sigma IV, thought maybe someone might know the story behind the Alpha V58?

===

Hi Bert.

A Brummy is someone from the Birmingham area (UK).
I don't think it's meant as an insult, just a nicname for them. I think they may even refer to themselves as brummies. Rather like those from Liverpool are called "scousers".

I am not sure if Aaron really hates brummies or is just saying such things about them because he thinks I am one. I believe that it does not matter where I am, he will give the same insults about any place that he thinks I live in.
I think you know where I am, but if you are interested, I could send you an e-mail that would clear it up.

Brainbuster.

===

You tell me... you started this thread, you have a problem with me. A short while back, you sent spam to my mailbox with a rather large file.
It got deleted on the server... without even being downloaded. If it had of been a small text e-mail, I may have considered reading it, even though there was no reason for you to be e-mailing me.

===
> You and I are two peas in a pod
===

Noooooooooo, please.
If being a legal CBer makes me like you, then I had better go out and get a linear.

===
> (ideologically speaking) then. You should have no
> problem when I opine that ILLEGAL cb outlaws are dorks.
===

The problem is that you give abuse to anyone who does not use your tactics. If you remember back to the first problem... you was spamming the group with multiple copies of the same long file several times a day. I asked you if you could stop sending that many copies... and you twisted it to claim that my problem was with the law. But common sense should tell you that I have no reason to fear Part 95, just the waste of bandwidth.

I have made it clear all along that I run a legal system, I have even advised people against linears, although purely from a technical view point... antennas are the way to get real gain.

But this does not stop you, Sparky, and Georgina from hurling abuse at me. If your purpose on here was to act on illegal activity, you would confine your comments to the illegal users only, you would not be picking on everyone... including brummies.
Last time I checked, it was not illegal to be a brummy. They can't help it... to much Viking blood in that area of the UK.

Hurling abuse is not cleaning up the band, but then spending all your time on this ng is not cleaning up radio either.

===
> > I know, standard reply when no real answer is available...
> > >> sod off.
> > >
>
> Plenty of answers.
===

Go on then... answer how you came to "trace" to a place that I
have never lived in.
Some detective work... eh.

Me thinks you protest too much, snip difficult questions, and use offensive
language... all evidence of your inability to give any proof of your clam.
I know it's BS, you know it's BS... yet you think you can fool everyone with
it.

Even Sparkles posts proof of his theories, so it really is very simple... Put
up, or shut up.
It's time to show your hand.

Brainbuster.

===

Boy, are you thick or what?
I already made it as clear as I can... you must be the only person on this group who did not understand.

I HAVE NEVER BEEN A BRUMMY.
I HAVE NEVER LIVED IN THE BIRMINGHAM AREA.

Clear enough for you... or is English not your first language?

Why are you suddenly willing to drop the charges to "was a brummy"?
Smelling defeat, checked a bit further and found where you cocked up?

That may be as close as we will get to an admission that you know
I am not in that part of the UK.

===
> SNORT!
===

Yes, we know about your habit... but that's another issue.

===
> Did you actually SAY the name "Birmingham"?
> Crikey, I thought you were too ashamed of it.
===

I cannot be ashamed of a place I do not even know.
You really are having a hard time understanding basic English.

===
> Conversely, say the word "brummie"
> and you think of
===

You may do, but I don't really give brummies a single thought from one day to the next. You really seem to think of little else right now, must be the thought of "poofters" that keeps you thinking of them.
As for me, my thoughts are much nearer to home.

Brainbuster.

What do you mean by basket case? There are some problems with the measurements sent by the factory, and as Jay says, it is not made from the best aluminum, but all in all, it's probably the best aluminum vertical commonly available.

Several points of note:

*The cops were able to bust Candyman thanks to HR2346. I seem to remember when keyclowns in this NG were whining, screaming, and crying about how "useless" this legislation was. Doesn't seem so useless now.

*This guy was "only" running 700 watts and he got attention. Imagine the attention the keyclowns running 5KW can get.

*"He said it couldn't be his equipment, he was running completely legal equipment". To me, this is the best part. It illustrates the typical keyclown's dishonesty when cornered.

*Munster IN is near Gary, where my parents are from. Makes you wonder....

-Aaron-

==========
CB equipment seized from 'Candyman'

Munster man accused of harassing neighbors for years.

BY ELIZABETH EAKEN Times Staff Writer
Posted on Saturday, April 13, 2002

MUNSTER -- A citizens band radio operator known as "Candyman" was arrested at his home Friday following years of neighbors' complaints about his high-wattage CB interfering with their electronic equipment, cordless phones and televisions, police said.

William Bates, 38, of 8948 Chestnut Lane, was arrested on a misdemeanor harassment charge that carries a maximum sentence of one year imprisonment if convicted.

Police seized Bates' CB; an antenna mounted on the roof of the home that was 2 feet more than the maximum height allowed by the Federal Communications Commission; and a Texas Star linear transmitter that boosted the output of the radio from the maximum 10 watts regulated by the FCC to nearly 700 watts.
Bates used a great deal of profanity in his CB conversations, according to Sgt. Doug Simpson of the Munster Police Department.

"Basically his problem is he would get into verbal confrontations with people and was talking about sexual confrontations and stuff that was really off the wall," Simpson said. "... From neighbors' complaints we began to monitor his CB traffic because it was so vulgar."

Simpson said it was the use of profanity that allowed him to bring the charges against Bates.

According to Simpson, he was on Bates' trail for a couple of years first speaking to him about the neighbors' complaints in October 2000. "He said it couldn't be his equipment, he was running completely legal equipment," Simpson said.

Simpson said he warned Bates over the CB a week ago that his comments were inappropriate, and if he continued, the Police Department would take action.
Simpson said the delay in arresting Bates was due to not knowing how the town could enforce the FCC regulations and a lack of cooperation from the FCC.
After a complaint to the Town Council from one of Bates' neighbors, Councilman John Hluska, D-1st, a former police officer, and Simpson pored over the statute books. They discovered Bates could be charged for harassment, and the Town Council enacted a new ordinance last summer in order to enforce the FCC rules.
According to Simpson, Bates' violation of the FCC regulations carries a penalty of no longer being able to operate a CB.

Simpson said during the course of his investigation he discovered about five to six others in the area, including Hammond and the Black Oak section of Gary, that are causing similar problems. He plans to contact other law enforcement agencies to stop the violators.

I've had this antenna for about 7 or 8 years, by the aged appearance
of the aluminum, it may be an old Avanti, but I found the assembly
instructions for an Alpha V58, it seemed to be a usefull guide to go
by to put it back together, as they are practically identical....
It was in dreadfull condition when I got it, so maybe I spoke without
knowing what I had, its been so many friggen years that I forget all
the finer details LOL, more fuzzy memory than logic, oh well!

If it helps, and Jay correct me if I'm wrong...I think the Sigma had stainless stingers at the tips of the radials, and the V58 has tubing all the way. Been over 20 years since I had a Sigma!

Yep, sure 'nuff his neighbors would have been perfectly content with just the interference to their TVs, radios and telephones. Hell, they probably would have thrown him a party...

Nothing illegitimate about a gamma match, it is simply the mechanical
equivalent of tapping up the loading coil to get a 50 ohm match. That it
may be poorly done is another issue entirely. It also allows the antenna
to be at DC ground which both helps the noise level, protects the cheesy
front-end of your receiver, and lets the fire marshall sleep nights if it
is installed correctly.

The 5/8 antenna, among both VHF Amateurs and CBers, has acquired a bit of undeserved mystique. It's claim to fame is the lowest radiation angle among verticals which is not generally to my mind worth the clutter over a simple-minded 3/4 (not a lot different) and for a number of reasons will not decouple from the coax particularly well. It too has a loading coil and tapped match which will help those to whom SWR has religious significance but that is about it. And it does allow the antenna to be at DC ground.

CB is interesting because it is where HF and VHF collide. The radiation angle is of some significance at CB, and somewhat of significance at VHF where there is more point-to-point work, but really not of much interest at UHF where hitting the repeater is the thing. You rarely see much beyond the 6.5 inch quarter wave for no better reason that a broader radiation pattern is useful if you happen to be in a hole. So it is a good idea not to get spec-happy but pay some attention to the job to be done.

And if running power is the name of the game, loading coils open a whole new can of worms. In this case, I will take the gamma match any day of the week.

Aaron, this is both good and bad. The good part is that a vulgar mouthed insult to the radio community is now off the air. The bad part is that if a city or community wants to do something to a specific person, they now have the ability (though not necessarily the right) to pass a law so they can put that particular person in jail. That is a very very bad alternative. Legally I would suspect that this arrest and seizure would be overturned IF the city is enforcing federal laws. That is out of their realm of expertise. If they have a problem with the FCC's lack of cooperation, then they should consider filing suit against that particular agency.

I'm interested in hearing how this case turns out.

It has happened more than once where an illegal CBer is held accountable through laws other than federal. There was a civil suit even in my town where the operator was found to be causing a nuisance. Nuisance laws have been on the books for a long time, and the FCC doesn't prohibit the states from prosecuting for nuisance caused from RF interference. In fact, if the FCC fails to enforce any of it's laws, the state may do so provided the state law applies to the violation, and that law isn't prohibited by the feds.

The only defense the operator might have is by the federal law saying that the devices being interfered with must accept interference from RF radiators, but that only applies when the radiator is legal. If the interference can be proven, it would then be the operator's burden to prove that he was operating legally and within the FCC's radiated emission limitations, which I don't think any of them were willing or able to do. If the proof of interference includes profanity or proof of other illegal operating procedures, the defendant would probably rather keep the case in the lowest court possible and take the hit instead of pushing it into federal court. Regardless of the outcome, it can be an expensive journey for the keyclown.

Until the FCC returns from it's current vacation from enforcement, the state and local nuisance laws, both criminal and civil, are probably the best defense the general public has against illegal operators.

I think the point Randy is trying to make, that you guys keep missing is
that IF he were to operate his ham rig on 11 meters, with the power set
at 4 watts and on a "legal" frequency, would anyone be able to really
tell?

First off, we all know that the rig is illegal to use on 11 meters since
it's not type accepted, that's not the point.

Could you tell? Coming from years of experience, MOST ham rigs do not do
AM much justice, and with few exceptions, are a dead giveaway on 11
meter AM. SSB, is a different story. There are a few exceptions to this
(such as the Yaesu FT 101), but to a trained ear, a ham rig on AM is
fairly easy to pick out.

Someone else made the comment that if you're going to run illegal
equipment, better it be a quality ham rig, than a butchered up CB.

Unless you a serious SSBer (who would benefit from the receive filters
and variable bandwidths), it's hard to justify spending the cash for a
good ham rig, just to run on 11 meters.

Does running a ham rig on 11 meters violate the letter of the law?
Certainly.

Does running a ham rig on 11 meters violate the spirit or intent of the
law, by minimizing interference? Maybe, maybe not. It depends on the

operator.

> totally excited about Jay's antenna! Whooo Hooo!

I have ran all sorts of omni directional antennas, from a 1/2 wave GP,
an Astro Plane, a Hustler 5/8th, and the Sigma 4. Despite what you may
have been told, the Sigma 4 was the best performing antenna out of all
of them, in my case.

Now I was not in the best location (I.E. not on a hill), so the
diffrence in radiation angle may have played a bigger part than actual
gain. But from my own testing (Which was with strictly local people with
"trusted" "S" meters), my signal was strongest with the Sigma 4.
Another, less accurate comparison was with my neighbor, 6 doors down,
who has a Alpha 5/8, who was always just a bit lower in signal than I
was, with similar power.

As always YMMV, but I tend to believe actual field test results over
"the numbers" any day.

Frank (Sparky@cet.com) wrote:
It has happened more than once where an illegal CBer is held accountable
through laws other than federal.

>And it's happening more often to hammies.

There was a civil suit even in my town where the operator was found to
be causing a nuisance.

>Before or after the civil case?

Nuisance laws have been on the books for a long time, and the FCC
doesn't prohibit the states from prosecuting for nuisance caused from RF
interference.

>Which has nothing to do with a civil case.

In fact, if the FCC fails to enforce any of it's laws, the state may do
so provided the state law applies to the violation, and that law isn't
prohibited by the feds.

>Not true. The local jurisdictions can enact their >own legislation and
enforce that, but they sure >as hell can't enforce FCC law.

The only defense the operator might have

>Pure speculation.

is by the federal law saying that the devices being interfered with must
accept interference from RF radiators,
but that only applies when the radiator is legal.
If the interference can be proven, it would then be the operator's
burden to prove that he was operating legally and within the FCC's
radiated emission limitations,

>Again, not true. If the interference is proven, >the offender is
warned, usually several times, >and he doesn't have to prove Jack to
anyone.

which I don't think any of them were willing or able to do. If the
proof of interference includes profanity or proof of other illegal
operating procedures, the defendant would probably rather keep the case
in the lowest court possible and take the hit instead of pushing it into
federal court.

>To date, the FCC has flat out REFUSED to >get involved in local case
appeals concerning
>enforcement.

Regardless of the outcome, it can be an expensive journey for the keyclown.

>Yes it can be, but usually only when was is >ignorant enough to operate as this guy did. >For comparable examples, check any of the of >myriads of hammies slapped with fines for >misbehaving as opposed to cbers.

Until the FCC returns from it's current vacation from enforcement, the state and local nuisance laws, both criminal and civil, are probably the best defense the general public has against illegal operators.

>Nah! The FCC is still popping unruly hammies >left and right, and they are the main source of >discontent, evidenced by the sheer number >popped as compared to cbers. The FCC is >doing a great job of enforcement, >concentrating on the most troubled aspects of >radio.

Yes, primarily 11 meters but the freeband for DX too. I already own a Grant XL. Good radio on AM but the SSB on it for some reason is screwed. I've had the radio for what seems like forever. Time for a change.

I have quite a few friends that are local and some just out of range. CW is nice because most on 11 meters don't know it. Added privacy, and it can get out.

>Look at the MAIN posting category and figure it out. They also get pulled
>when whiney douche bag motherfuckers cry to eBay about them being on there.
>Now you wouldn't be one of those people would you?
>Train

No, Train, I am not. Quite the contrary. I am someone who believes in the free market and thinks these radios should be able to be sold freely. They sell similar models at national chain truck stops all over the country, so why not via eBay?

My gripe is that eBay apparently practices selective enforcement of this rule. I once tried to sell one of these radios on their venue. The auction was pulled within hours. Upon inquiry to eBay, I was told these radios are not "CB radios" and thus cannot be sold under the CB category.

The main category is ham transceivers, yes. But this radio is also being advertised under the CB category. Under eBay's rules, this should not be allowed.

What's good for the goose is good for the gander. Don't you agree?

I wish I made it every week. A good chuck of the money is for overtime and overnight premium when out of town, otherwise I'm on a straight salary. Most customers choke when they see the weekend service rates they have to pay to support pay that kind of money I quoted above. If you want to see some REALLY scary numbers you should see what the company charges the customer to see my bright smiling face on their door step!

Nah. Still running Pac Bell. They've been better than ever. Had a
"disturber" problem that was disconnecting me but since that was fixed (4
months ago), I've had zero problems.

Where'd you get the idea I had cable?

For the pot issue, yes I do. I have realitives in my familly that have terminal cancer and other ailments and it helps them to maintain a appetite and releave pain. A person at my church who has MS, annoucned to the church he was using it for the pain and that it helps considerably. Thats my only stance for pot. I feel its more usefull than cigarretes, pain killers and drinking. Good enough reason for you? Do you not find that the use of alahol and other drusg are far worse than someone using pot? Even if its not for the reasons mentioned above, i've yet to find a pot smoker who was mena or hot tempered while "high". I also know many people who raise their kids, keep high paying jobs and managed to live a perfectly normal life.

> Because I mention that Nebo is showing off smoking pot and waving guns

> Explain why.

Well you were attacking him personally for his lifestyle just because you dont agree with it. I own a gun, i dont go waving it peoples faces and he wasnt "Waving guns around" he happened to have it in his lap resting on his lap and arm. Guns don't "mean alot to me", they arent a way of life, but i feel that if there were no guns and only the military and police had weapons, how would we defend ourselfs? 2X4's? I dont feel everyone should own one, nor do i feel that one is needed to live a good safe and healthy life. Granted i also dont feel the "Police" or all of the goverrntment is the bad guy and out to get me, but i live my life in a way of "be prepaired". Something they teach kids in Boy Scouts, are you against the boy scouts too Aaron? As for the pot, i already made my point.

Now go sit down and nit pick this post so you can have something to say in a reply thats pointless just like so many other posts of yours. I find it funny how you feel everyone in here is so defensive, yet you are the exact same way. When it comes to arguments and instigating, you are right up there on the top with the other "shit kickers" and "hell raisers". Do you get a woody from all this? Or does it help you feel like you're more inteligent? You may not always start shit in a blatent intent to get shit

stirred up, but you sure as shit love to plant those little seeds (Your posts) with just enough content in them that you know SOMEONE will bite and it will start a nice long worthless off subject pain in the ass to follow thread of shit heh.

Hell for once, i'd like to see a post from you ABOUT cb radio, not about its rules and regs or "Thats illegal", try contributing something other than that and actually participate in a conversation, i bet you get alot more respect in here and elsewhere too even if your views on radio stay the same. One can hate illegal radio equipment and these morons that run 10KW out of their cars, yes i feel keydowns are rediculas, but so are so many other things in life that people do for fun, entertainment etc. I've said it before, if you wanna preach your rules and regs and shit, thats fine, but thats ALL You do. Just once, i would like to see you participate in a thread without stiring the shit up. Is tha possible for you?

I didn't mean local LE can enforce FCC laws, but they can enforce
their own laws to remedy the interference provided they don't conflict
with federal laws. But I can see where I might have worded that
poorly.

Booze has been widely used as a pain killer in terminal patients for many,
many years as long as the patient can keep it down. Once the effects of
opiates has been nullified by the human body because of being used so much
as is almost always the case in a terminal patient, many doctors will just
get them drunk. As for the use of pot in this instance, I would have to say
it would be well suited. I've not smoked the stuff myself in 25 years when i
was still in high school but I can see the usefulness of it after 15 years
in the pharmaceutical business.

1234. F/S Elkin 8 Tube base amp

Newsgroup: rec.radio.cb
Date: 2002-04-15 18:50:40 UTC
From: Train <cbmods@optonlineNOSPAM.com>
Message-ID: <4iFu8.76370$8E3.19482755@news02.optonline.net>
Source record: 121049

This has been my personal amp for many years and is in very good operating condition. Uses 8 12DK6 tubes (I just checked the price on these.....they are $12.00 each).
This IS an AM and SSB unit!
Amp on low w/ 2 watts in D/K is 50 watts swinging 600.
Amp on high w/ 2 watts D/K is 100 watts swinging 900. Measurements were just taken this morning using a Galaxy Saturn II mobile radio, Heathkit Cantenna, and an Autek WM-1 peak reading meter.
Price is $450.00 plus shipping.
I will take pictures of it later today and they will be available if needed.
Contact me direct at:
cbmods@optonline.com

Look David. Here's the sequence of events:

1. I made a comment about amps being illegal.
2. Nebo retaliated by making a comment about me.
3. I responded by making a comment on Nebo's "lifestyle".
4. YOU came rushing to the defense of "pot and guns".

Who really started this ball rolling? Check out event #2. Nebo. Yes, Nebo. His fault. He took it upon himself to come to the defense of cb amplifiers. Somehow Nebo feels personally slighted when amps are criticized. Or maybe he just feels guilty whenever anyone points out the facts of illegal operation. I don't know. But I do know that any fool can go to his website and see this fellow isn't a cancer patient not is he an NRA safety instructor (especially when he points his weapon at the photographer).

Bottom Line: Tim has admitted to being arrested and jailed several times and his embrace of the "gangster" lifestyle is obvious. You can champion his use of pot and guns if you'd like, but it makes you appear a bit ridiculous.

Well as with any drug, it can be abused but at least pot wont be killing you off quickly if at all if history serves as proof of that. I agree about alcahol, they used it years back for my mom to help prolong her pregnancy because she was going to have a pre-mature child. If used correctly and not abused it can serve as a usefull drug. Unfortunatly i've seen too many people, friend and familly, that abused the booze and paid with their lifes or livleyhood. And why the hell is Hemp illegal? seems it would solve our paper problems (clear cutting), its strong, can be made into damn near anything yet its still illegal, go figure. Anyway enough on the drug and alcahol, this is a CB newsgroup correct? :)

Thanks for the comment Train, i agree with your statement fully. I havent smoked it in years myself, but i remember how it did releave some pain and i deffinatly had the urge to eat LOL...

1237. Ham Radio Recommendation for Tahoe Backcountry Emergency Use?

Newsgroup: rec.radio.cb
Date: 2002-04-15 19:06:46 UTC
From: aes <siegman@stanford.edu>
Message-ID: <siegman-FB6CD8.12064515042002@usenet.stanford.edu>
Source record: 121052
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.backcountry,rec.radio.cb

I'm an older guy who spends much of the winter doing day hikes into the Lake Tahoe backcountry on skiis, going maybe 4 or 5 miles into the woods or up canyons, most often alone (not counting my dog . . .).

Usually someone knows where I'm going, and I've been carrying a cell phone for possible accidents or medical emergencies, but cellular coverage is not always complete. So, I'm wondering about ham radio gear (or CB?) for possible emergency communication.

Question is: Any specific recommendations for a Radio Shack or other handheld unit that I could buy and just toss in the bottom of my backpack for possible emergency use? (No interest in chatting while on trail; just want an emergency unit just in case.)

(I'm told there are some repeaters in the Lake Tahoe region at 146-7, 224 and 442 MHz frequencies, and am digging further into this.).

Would a CB unit have any chance of having sufficient coverage?

First off, you might want to obtain the books on licensing for the amateur stuff. the CB re-quires no license, but I don't know how well a handheld would work in the wilderness.
The VHF/UHF ham gear would likely work, but you will need the license. This does give
you several options in that you can call for help via the repeater, or dial up 911 and talk direct to the ES authorities if the repeaters are equipped with autopatch.

One minor memory I have of Birmingham is bipping north on a motorway into a freeway stack by and over a monster railyard. Seems this aglomeration is where Birmingham used to be until Adolf re-arranged the place. Apparently it was easier to rebuild next door. Talk about urban renewal.

The industrial Midlands, home of the 'dark, Satanic mills', is an area I would like to see more of although the Tourist Board would probably turn white and shake. Because a good radio friend lived near Wigan in the Northwest I got a chance to spend a day at Wigan Pier (something of a local joke BTW) which is now one of the heritage parks and well worth the visit. Wigan is an old coal town that rather than rearrange over a century of slag and coal crap built a racing cart track around the piles. Incidentally, Wigan is not on the ocean, the pier such as it was loaded coal barges.

And no matter what they tell you, Wigan Pier is real. I fell off the damn thing stumbling back from the pub.

If it were a perfect world, then if you get into a medical emergency, you would be able to transmit from a mountain top and you might be heard. Unfortunately, in my experience, you won't be on a mountain top when you need to call most. More likely that you will be down in a valley.

There are exceptions, of course. A couple of years ago, some folks were climbing on the north side of Mount Shasta, and they got off route and took a long sliding fall. Broken leg, I think. They had a cell phone, so they called 911. I believe that the call was picked up somewhere in Oregon and a 911 dispatcher in Klamath Falls handled it. They were able to take a forest service ranger in by military helicopter and drop him above the injured party.

That was reported in the news since it was kind of remarkable that the 911 call was received at all, even if you are relatively high on a mountain.

Something's wrong with the amp, since even Toll Free admits that peak
power on AM with 100% modulation is only 4 times the carrier. And if
the amp was measured using SSB, it is radiating 50 to 100W with no
input. Scary.

... hmmm... wait a sec, is your wattmeter calibrated for Bird-watts?

Why? That's like opposing a new local ordinance against public garbage
disposal because "they now have the ability (though not necessarily
the right) to put a particular person in jail". If you're not the
particular person who dumps garbage in the streets you have nothing to
fear.

It's still odd how the paper reports that he was using more than the FCC allowed 10 watts. I thought the limit was 4 watts. Seems to me they don't know the regs for CB themselfs it they think 10 watts in the max allowed. Maybe he can get out of it on this small area of them not knowing the rules themselfs.

coverage?

CB is definitely out. No one around there is listening for a weak cb signal. Next to the cellphone you might look into a EIPRB or similar device. I may have the initials wrong on that. It's a emergency transmitter beacon that works with satellites. You can find these devices on lifeboats and aircraft. These devices will get everyone's attention so you need to be careful in not turning it on by accident. The Search and Rescue people have located these things down to someone's automobile trunk a time or two.

Tahoe's trails are usually surrounded by mountain and vegetation all yr long so low power hand held radios don't provide the absolute coverage you might need. There are a

few ham rptrs around there but I don't think I would trust my life to them. It would be best to get a ham ticket but in the case of an emergency you could use the radio to get help without the ticket.

versus a
> 1/4 wave whip.

Tim you made no such mention you said on the line, that means keydown to me
or side by side. Nothing real practical about that.

> most times when you see a standard 1/4 wave whip on the line its used as
part
> of a mobile beam.

So what why not use coil antennas as part of this beam if they are so good.
who cares 2 1/4 wave antennaa can be compared to 2 coil antennas

> a loaded antenna mounted on top of a four door passanger car will beat a
bumper
> mounted 1/4 whip alot of times

Is it all the time or alot of time? Or your not real sure haha funny now you
are specifying 4 door cars what if it is a 2 door will ist still win? what
about a someone with a pick up who mounts it on the bed behind the cab?
which will work better.

> i know a guy that had a 8 element yagi on the group for tuning which
stayed on
> a 4 foot tripod for over a year and he had no problems working the world.
what
> that has do with it comparing to a 2 element 75' off the ground i dont
know

Tim thats what your arguement is about, you are comparing oranges (bumper
mounted antennas) and apples (roof mounted coil) and trying to say which
antenna will work better, consider the 2 element 75 ' in air or the 8
element 4' off the ground, it is not much different than saying bumper mount
the 1/4 wave whip and roof mount the coil they are not the same test. And
you still never answered the question which will work better?

> your right i didnt but you should have assumed that the poster asking the
> original question was living in the real world like most of us here

Tim, I don't assume and I live in the real world too, and have seen 1/4
wave antennas kick the dog snot out of coils, when compared likewise. Tim i
see guys all the time with trunk mounted 102 whips how would this stack up

against the coil? Thats as real as the real world gets. Stick with your coils i love when guys like you promote coils antennas.

It's not quite that simple, I'm afraid. You need a license, not only to make it legal, but to know what you are doing on an amateur frequency--especially attempting to use repeaters.

Handheld amateur band radios are not simple (or cheap) devices, where you just have to turn it on, push a button, and talk. Frequencies have to be programmed in and you must know where the repeaters are and if it's likely you could access them from your particular location.

Operating VHF/UHF repeaters require knowledge of what the repeater offset is, what sub-tone codes are required to access the machine, what the protocol is for making a call (you must give your callsign first) and how the autopatch works (what keypad sequences are needed to be entered to operate the patch, or even if it is an autopatch repeater). Improper (or unlicensed) operation will most likely prompt the repeater control operator to shut off your attempts.

There are lots of sources for help in getting a license and learning what you need to know and newcomers are warmly welcomed and assisted by the many hams in the Tahoe area. But unlicensed operations are not tolerated well by hams on their bands and won't get very far trying to fake it.

Twisty, do you always lie or talk about shit you have no idea of ? Who says
they can't enforce FCC Laws thats the ones they are able to enforce

"Simpson said the delay in arresting Bates was due to not knowing how the
town could enforce the FCC regulations and a lack of cooperation from the
FCC.

"After a complaint to the Town Council from one of Bates' neighbors,
Councilman John Hluska, D-1st, a former police officer, and Simpson pored
over the statute books. They discovered Bates could be charged for
harassment, and the Town Council enacted a new ordinance last summer in
order to enforce the FCC rules. "

CB equipment seized from
'Candyman'

Munster man accused of harassing neighbors for
years.

BY ELIZABETH EAKEN Times Staff Writer
Posted on Saturday, April 13, 2002

MUNSTER -- A citizens band radio operator known as
"Candyman" was arrested at his home Friday following
years of neighbors' complaints about his high-wattage CB
interfering with their electronic equipment, cordless phones
and televisions, police said.

William Bates, 38, of 8948 Chestnut Lane, was arrested
on a misdemeanor harassment charge that carries a
maximum sentence of one year imprisonment if convicted.

Police seized Bates' CB; an antenna mounted on the roof
of the home that was 2 feet more than the maximum
height allowed by the Federal Communications
Commission; and a Texas Star linear transmitter that
boosted the output of the radio from the maximum 10
watts regulated by the FCC to nearly 700 watts.

Bates used a great deal of profanity in his CB
conversations, according to Sgt. Doug Simpson of the
Munster Police Department.

"Basically his problem is he would get into verbal
confrontations with people and was talking about sexual
confrontations and stuff that was really off the wall,"
Simpson said. "... From neighbors' complaints we began
to monitor his CB traffic because it was so vulgar."

Simpson said it was the use of profanity that allowed him
to bring the charges against Bates.

According to Simpson, he was on Bates' trail for a couple
of years first speaking to him about the neighbors'
complaints in October 2000.

"He said it couldn't be his equipment, he was running
completely legal equipment," Simpson said.

Simpson said he warned Bates over the CB a week ago
that his comments were inappropriate, and if he continued,

the Police Department would take action.

Simpson said the delay in arresting Bates was due to not knowing how the town could enforce the FCC regulations and a lack of cooperation from the FCC.

After a complaint to the Town Council from one of Bates' neighbors, Councilman John Hluska, D-1st, a former police officer, and Simpson pored over the statute books. They discovered Bates could be charged for harassment, and the Town Council enacted a new ordinance last summer in order to enforce the FCC rules.

According to Simpson, Bates' violation of the FCC regulations carries a penalty of no longer being able to operate a CB.

Simpson said during the course of his investigation he discovered about five to six others in the area, including Hammond and the Black Oak section of Gary, that are causing similar problems. He plans to contact other law enforcement agencies to stop the violators.

Elizabeth Eaken can be reached at eeaken@howpubs.com or (219) 933-3318.

1279. Re: Ham Radio Recommendation for Tahoe Backcountry Emergency Use?

Type in your zip code. You should get a list of all amateur radio
operators in your area. Ask one of them, they should know the area the
repeaters. What I'm saying, Who better to help you get started then
somebody in your area.
Good luck!

Excellent condition; 12 w AM and 20+ on SSB. No scratches - includes manual and mobile mike. I also have the chipset in a sealed, unopened box with manual for many additional features. $175 firm with three-day UPS shipping included. Contact me directly at catchthewaves@aol.com. This is an excellent radio with standard mod for 11.
Thank you,
Harold

my whole point was that neither one will work best ALL THE TIME so the guys like you that come out saying a 1/4wave stick will beat a loaded antenna ALL THE TIME are incorrect. there are no blanket statements liek that for cb antennas.

> Tim thats what your arguement is about, you are comparing oranges (bumper >mounted antennas) and apples (roof mounted coil) and trying to say which >antenna will work better, consider the 2 element 75 ' in air or the 8 >element 4' off the ground, it is not much different than saying bumper mount >the 1/4 wave whip and roof mount the coil they are not the same test. And >you still never answered the question which will work better?

And now you know why Train is killfiled and Sparky is not.

I saw the same things you did, noted that it was done on a peak-reading meter which must have meant the exciter was running in the milliwatt range for water-boiling watts, and threw up my hands. God only knows the mods made to the exciter from swing kits to limiter clipping and it is a fair bet there is no harmonic supression. Without some idea of the crap going in it is hard to guess at the crud coming out. It is also apparent that the flattopping must be phenomenal given a 9 time swing on high vs a 12 time swing on low.

This bitchkitty could put an end to communication on 6 CB channels, 3 TV channels, and the local airport without half trying. Sell the amp and Cantenna as a package, it is the only load a sane man would attach to that monster and even the dummy load would take out TV for blocks.

Some things defy rational description.

Gee...I'd better hide my camo hunting gear and antenna..or be called a "militia"
: p (All one of me..lol)
In reference to that net, I think it's called "Liberty Net" (Been awhile since I tuned in.). Last I heard it was on 3950, than moved to 3945 because of interference from other nets. They talk about everything from politics to flying saucers to Area 51 to "Black helicopters".
Hardly anything I'd call radical.. weird maybe..but not radical..lol
Sort of the "X-files" of ham radio freqs.

I concur with what Bob says. You will get very
sporadic signals from both Ham & cellular. What he's
describing is probably not a cheap thing, so check it
out before scraping all ideas though. Something is
better than nothing.

But you have to admit it
Dick, Sparky was getting quite humorous
towards the end. I was LOL when he said
"Bad Keyclown" Still laughing. Very funny
shit Sparky, I will give you credit there, also
Train not to be to bad here, but those figures
do seem a tad bit high, no offense meant.

Not really, but the whole story would be interesting.
What the newpaper usually tells is a sanitized version
with a certain point of veiw. Anybody in Muncie
with a comment?

Well, it has eight sweep tubes, probably running in some sort of
push-pull arrangement. Squaring is obvious, but I smell some serious
regeneration there. I'm betting that either the choke was replaced
with a lower value, or there was some sort of neutralization that has
been removed, all for the sake of a few more Bird-watts. And since the
heavy distortion is coming out the nozzle of a wideband tube amp, I'm
wondering if this thing has a ferrite output transformer instead of a
pi-filter.

dick would you had a problem if he listed it as 150 watts dead key 600 watts peak on low and 225 watts dead key and 900 peak on high? if he stepped his drive a little higher into the amp he would see these numbers no problem but i'm sure he has it lowered some to go easier on the tubes and lengthen there life. dont you think?

You are correct! The Sigma 5/8 is a far superior antenna over the Alpha 5/8. The earlier versions of the Sigma 5/8 were NOT DC grounded. The later versions were. I've owned, rebuilt, and sold many over the years.

As a matter of fact, I sold one to Jay so he could test against it. I don't mean to boast, but I can tell you all about the Sigma 5/8 and IV.

The person in an earlier post stated that his IV worked better than all of his other antennas. I'm sure thats true! But he didn't run it against a Sigma 5/8. Anyone who has ran both antennas wil tell you (90% of the time) that the 5/8 worked better than the IV. It makes sense really...the Sigma IV is essentially a 1/2 wave antenna and the 5/8 has a better pattern.

In one of the ARRL antenna books, it states that the radiated signal becomes "distorted" after a wave length of 5/8. There is actually a disadvantage to a 3/4 or even a full wave antenna! The most "EFFICIENT" antenna is the half wave. A 5/8 gives you gain due to a (for clarity) squished wave pattern (go ahead squish a ballon and see). If anyone has any questions about the Sigma antennas, feel free to ask!

Dino

i was tlaking about a cobra29 not having ssb? a galaxy has sideband no doubt, is it shitty on sideband? well that depends on what your comparing it to i guess. they drift too much and there recieve excpets way too much bleedover for any good long term qso's when the dx is high on the freeband. with people talking every 5khz a radio like this or the 2950 with shitty rejection is hard to listen to all day during the solar high when ssb signals are 30db over s9 all day from all over the world. a galaxy will work but there crude radios that were intended for truck drivers and not serious ssb work liek the 2510

Yep..those pesky "militia" guys are everywhere. One camoflauged himself as a Mako antenna..Only when the operator put a 1000 watts through it did he relieze it. He heard him scream and he went scurring down the road with 50 ft. of his coax..Sneaky buggers they are. : P
Do you believe in Black Helicopters and UFO's too by any chance?

> yourself sent it to all of the other newsgroup participants you thought
> should see it. how am i responsible for you sending it to brain?
===

That's easily explained...

If a driver kills a pedestrian... blame the car manufacturer,
If he was drunk at the time... blame the breweries,
If a mad axeman runs riot in a shopping mall... blame the hardware shop.

So, if a CBer uses 500 Watts and causes interference... he is NOT to
blame, it is generally exepted that it was the manufacturers "prank".
Gotta be right... the Voobster says so.

Or is it just that Aaron is not responsible for his own actions?

Brainbuster.

===

Me thinks you have a selective memory...

^ One day, Brainbuster, being a bloody nerk, a daft sod, and a brummy
^ scruff to boot, hauled his knackered arse home from his vannie job at
^ Marks & Spencer, there to see the latest Voobnarian wit plastered on
^ his telly screen (which doubled as a PC, times were tough you see).
^ Voobner's Viking charm so hotted up young Buster that he nearly
^ dropped his pastie. Straight away, our chap bodged several web pages
^ in honor of his hero. Upon seeing them, Voobner tittered amusedly for
^ a moment, then hurled them into the dustbin.
^
^ -Aaron-

So, you initiated that attack on me, and I responded.

===
> And now you're crying like a baby and ready to run away.
===

I have nothing to run from... I called your bluff, and you refuse to show
your hand. So, you see, Voob... *we* can take this no further, you will
not just admit you was bluffing with a total guess and I will not lie about
my location just to please you.

So, I have already e-mailed my proof to one person...
Anyone else want to see the proof of where I am?
Requests by e-mail only... to my usual addy.

As for me, I have more important things to deal with right now... I have a
life outside of this newsgroup, a family to spend time with, and now I have
business out of town.
You do not tell Sparky or Kieth that they are running away when they go
for a while on business... same thing here, business.

If you really have a family, then maybe you should think about priorities.
You certainly cannot have time left in your day for your family.

===
> >A short while back, you sent spam to my mailbox with a rather large
> >file. It got deleted on the server... without even being downloaded.
> >If it had of been a small text e-mail, I may have considered reading
> >it, even though there was no reason for you to be e-mailing me.
>
> It is generally accepted that Nebo was the author of that prank. Go
> crying to him about it.
===

No, you sent the e-mail to people.
Tim may have created the file, but you spammed me and other
newsgroup users with it. Tim is not responsible for your actions.

Using your logic, all "law breakers" should get off... it is the fault of the
person who sold or gave them the equipment.
So, there we have it, guys... If you beak any laws or rules, Aaron
says to blame the person who supplied you with whatever you used, it
works for him.

Brainbuster.

If I have seen one I never paid any attention to it. I heard on a TV show that these so-called "black helicopters" were used to take cattle for dissection and then return the carcasses to the fields afterwards. The theory was that certain internal organs can show evidence of radioactive contamination downwind from the A-bomb testing grounds. They said the whole thing is supposed to be hush-hush because they can't admit that they don't know too much about the long-term effects of nuclear fallout. I don't think I'll buy into that theory, but it's a whole lot more reasonable than aliens with a taste for bovine grey matter.

No..sorry..I have NEVER seen a "Black Helicopter", UFO, Militiamen skulking at hamfests, Bigfoot, Little grey aliens (or green ones for that matter), MIB's, The Loch Ness Monster, pixies, fairies, elves, leprecans, wood nymphs, ghosts, goblins, vampires, poltergeist, the headless horseman, witches on brooms, witches without brooms, manifestations of demonic activity, or other paranormal phenomenon.
I have however, seen my girlfreind in face cream and curlers. That was pretty scary..: P

And the choppers are not black..they are a dark OD green that appears black at a distance and have black insigna that is hard to see against the background..

The very REAL fear in this case is the wide lattitude by which these
local "laws" can be worded and enforced. Since "local yokels", for the
most part, lack the proper training and experience in RF matters, they
are more likely to paint all interference complaints with a broad brush,
and many legally operating people stand to be harassed by LEO's
answering a neighbor's complaint due a poorly designed consumer widget.

It's one thing to be an illegally operating "keyclown", it totally
another to be minding your own business operating a 100% legal CB
station.

Hams have some recourse in that the FCC will stand by the license to
some degree, and federal laws usually supercede local ones. But since CB
is licensed by rule, there are no operator license privileges by which
an operator can cite as a defense of their radio station. Legal or not,
it is possible that you could be forced off the air, or have to pay
large amounts of money defending your right to a radio hobby, simply
because a neighbor has a little political clout and a piece of junk TV.

>

And this is a perfect example of how these local laws can be bent to apply to an individual case. If, for example, a complaint were lodged against a local CBer, and subsequent investigation turned up that he was running 100% legal equipment, but his signal was still being intercepted by a poorly designed consumer widget, the fact that he may let off a few "colorful metaphors" once in a while, could be enough to cite the person for disturbing the peace etc.

There is a less sinister explaination. I knew a group of hams that were
into converting military radio gear and using it. They belonged to a
club that shared info/parts etc. Many times they dressed in camo gear at
hamfests to identify themselves to other club members..

Forget about CB's, handheld won't get you much coverage and besides
unless you're by a highway it's not likely someone will be listening
for a distress call.

If there is repeater coverage in the area where you want to hike, then
a 2 metre ham radio will probably do the trick *most* of the time. As
someone else suggested here, go to http://www.qrz.com/i/names.html and
find out who is a ham operator in your area and they'll be able to
help you much better than any of us here.

Maybe you could get a local ham to scout out the area where you hike
with their radio to see if it's worth it for you to invest the time
and money in ham equipment and passing your license. You might be
surprised at the repeater coverages.

I've personally used a repeater in the adirondacks to call in a rescue
for a lost child a few years ago and the local hams were extremely
helpfull and professional. They had the local Rangers over in a flash
and the kid was found within a few hours.

My 2 cents...

Pat - VE2VFD

whats so sinister about Militias? you've been watching too much CNN. even though the hams here are running around like a chicken with there head cut off trying to distance themselfs from the militia faction thoat does indeed reside in the ham radio hobby theres nothing sinister about it and actually most of the "militia" guys are a little looney and arent usully the brightest of the bunch but they are indeed there. why hasnt anybody brought up the ham operator/militia man that was running a huge pirate station on on 45 meters and then every night after closin he'd qsy to 80 and tlak about it with the other militia guys. any of his ring a bell doc? you may not remember since they didnt talk about hotdogs or pizza much back then

lol i dont know what they are or why they are there but living here in the houston area near a air force and coast gaurd station i can say i've seen more than one flying with no ID numbers of any kind because i actually do pay attention. its not unusual here nor is it any UFO activity. just good ole USA boys up there flying for uncle sam doing god knows what<<

Living right under the nose of the "Conflict in the middle east's" command post, (MacDill AFB) unmarked planes and helicopters don't even draw attention. It's the fighter jets in formation practicing maneuvers in unison as they head toward your fair state that garner the attention. One can listen to many of their exercises on regular 'ol VHF.

Not when the hammie is causing a continuing problem, they won't. The FCC has made it abundantly clear they will NOT become involved, especially to the extent of taking sides with the hammie, if a local jurisdiction has brought charges. In such instances, that ticket is nothing more than a permit to legally utilize certain freqs. I know what you old cranks WANT it to be, but it simply doesn't offer the umbrella of protection that wishing provides. The writing was on the wall long ago concerning this type of legislation and your type was warned that this would actually backfire and hurt the hammies more than the cbers, but some of you do not listen to reason and wildly rushed in where angels fear to tread and blindly supported this legislation. This "passive" aggression by the FCC has netted way more hammies than cbers and will continue to do so.

All good responses thusfar. I agree, forget CB.

An EPIRB would be very affective, as mentioned previously. But it might take a couple of days for your signal to work it's way thru the sattelites, FAA, local authorities, and ultimately to a SAR (search and rescue) group. Can you wait this long? A cellular telephone or amateur radio would be faster.

Key to both Amateur Radio and cellular telephones is understanding how radio waves propogate. For VHF and UHF it's basically line of sight. I know this is an oversimplification but in a general sense it's true. Getting your ham radio license will teach you all about this. This means that the receiving station needs to be on your side of the hill, or you need to hike to the top of the hill. You must know where the local cellphone towers and Amateur repeaters are located, this is crucial information.

Don't bother trying to use Amateur Radio gear without knowing what you are doing, it would not work. It's difficult to grasp while in the comfort of your own home, let a alone when you are lying in the woods with a broken leg. Again, getting your ham radio license will teach you all about this.

Sometimes I take a cell phone and sometimes a 2-meter HT. It depends on the area. In the past I've taken Amateur HF gear along for doing CW, but my code is getting pretty rusty so it stays at home now. I can't make any comments specifically on Tahoe.

How do you run 8 tubes? Two driving 6 - kind of sounds like it with the
flea-power exciter. And what about the 6? Jerk-Shove? I kind of doubt

it unless it is transformer output. Parallel? Omigod. Again probably transformer because the circulating current in the pi-coil would be well into copper tubing range and probably melt the solder joints. Common para sitic choke no doubt and a dutzy or worse yet nearly resonant choke on the shunt feed. It is pretty apparent also the the power supply is inadequate to the task at hand; who knows if the flat topping is setup or a lack of power?

Like you, it would not surprise me if there was a bit of regeneration going on or a top side parasitic for which sweep tubes were notorious (ask an old TV man about Barkhausens).

Which only shows us for the umpti-umpth time that meter readings are of interest only in a meter-reading contest. I would like to see what the SWR and real output would be if it were set up amp - bridge - lopass filter - wattmeter - dummy load. Probably need to surround the filter with dry ice.

TW,

IF I read the law correctly, it states (in paraphrase) that upon
presentation of a license
the matter must be turned over to FCC for action. It makes it pretty clear
that local LEOS
have no jurisdiction over licensed services. However, you are correct that
if a ham is caus-
ing some sort of interference, acting in a defiant or beligerent manner, he
will face the music-- just like anyone else.

Now, having said that, this ham is on record stating many times opposition
to local yokels
getting involved in communications law. I believe it is best left to the
agency (FCC) that is
charged with this specialized area of law, and has the trained people to do
it correctly. I
have lived in the same house for almost 16 years, had a ham station all that
time, and only
once was accused of interfering with somebody's TV. I went back and
re-worked some
grounds, gave the neighbor a pamphlet on curing interference, and that was
the last time I
heard from him. Now there WAS the time the satellite dish installer came

across the street
all indignant to demand that I stop using my "CB". I asked him what time of day this "inter-
ference" took place. "In the mornings". HA! I politely told him that I left for work at 6 AM and didn't return until after 4. He was a little disappointed because it meant he hadn't
found his interference after all. Just the mere presence of antennas was enough to set him off.

And that's where I oppose local enforcement. A perfectly legal ham or CBer, by the mere
presence of an antenna is going to "set off" the LEOs whether he's doing anything or not.
Eventually, the LEOs will make a booboo and seize a licensed ham's equipment and get the
hell sued out of them. The way the law reads, the LEO has no authority/jurisdiction over a licensed service. Doesn't mean they won't TRY to, however. Likewise, I am opposed to
locals going after legal CBers by mistake. There is no more travesty in this land than any in-
nocent person being hassled, wrongly accused, and inconvenienced on account of a flawed
law, and an agency that has, in the past, shirked its responsibility.

Been there done that. Ask most of today's tube jockeys and they will
tell you a pentode does not need neutralization, but most of them have
never tried to make a sweep tube run linear.

I don't know but I wish the folks in this NG would not be so quick to
recommend "getting a ham radio" everytime someone requires occasional
communication outside the range of FRS or CB. They make it sound like
getting a fishing permit.

he will face the music-- just like anyone else. <<

It is the same with the cbers...it's not like they are going to throw
the book at someone for causing interference..they will warn them...I
don't see the difference in the feds getting involved whether it's a
cber, hammie, pirate (TRUE pirate radio), whatever, once local charges
are filed. This legislation is doing exactly what it was designed to
do, abdicate the feds of any responsibility,,,in other words, this is
mundane BS to them..they have much bigger concerns than archaic hobby
radio signals*.
*Obligatory disclaimer: UNLESS a problem is ongoing.

>Now, having said that, this ham is on record stating many times
opposition to local yokels
getting involved in communications law. I believe it is best left to the
agency (FCC) that is charged with this specialized area of law, and has
the trained people to do it correctly. I
have lived in the same house for almost 16 years, had a ham station all
that time, and only
once was accused of interfering with somebody's TV. I went back and
re-worked some grounds, gave the neighbor a pamphlet on curing
interference, and that was the last time I
heard from him.<<

Yup. Honey always works better than vinegar.

>Now there WAS the time the satellite dish installer came across the
street
all indignant to demand that I stop using my "CB". I asked him what time
of day this "inter-
ference" took place. "In the mornings". HA! I politely told him that
I left for work at 6 AM and didn't return until after 4. He was a little
disappointed because it meant he hadn't
found his interference after all. Just the mere presence of antennas was
enough to set him off.

And that's where I oppose local enforcement. A perfectly legal ham
or
CBer, by the mere
presence of an antenna is going to "set off" the LEOs whether he's doing anything or not.Eventually, the LEOs will make a booboo and seize a licensed ham's equipment and get the hell sued out of them.<<

Or more probable, a simple violation of improper procedure by the LEO's. Again, the license doesn't even come into play in a case like this.

>The way the law reads, the LEO has no authority/jurisdiction over a licensed service.<<

With the obvious exceptions.

>Doesn't mean they won't TRY to, however.<<

Wasn't a guy busted for transmitting on emergency freqs. facing local/state charges?

>Likewise, I am opposed to
locals going after legal CBers by mistake. There is no more travesty in this land than any innocent person being hassled, wrongly accused, and inconvenienced on account of a flawed
law, and an agency that has, in the past, shirked its responsibility.
73
Jerry<<

100% agree. I was going to ask your opinion on local citizen's involvment in addition to the yocal locals, but obviously you can see where that is even worse.

Dear ARRL,

I don't know if this fellow (see below) is a member of your
organization or not, but he is certainly making a nuisance of himself
in the rec.radio.cb newsgroup by continually advertising his "10 meter
amps" to CBers.

I thought hams were supposed to police themselves? If so, someone
should take this disgrace to amateur radio aside and let him know what
harm he's doing to the citizens band.

Sincerely,

Aaron H. Voobner

This has been my personal amp for many years and is in very good operating condition. Uses 8 12DK6 tubes (I just checked the price on these.....they are $12.00 each).
This IS an AM and SSB unit!
Amp on low w/ 2 watts in D/K is 50 watts swinging 600.
Amp on high w/ 2 watts D/K is 100 watts swinging 900. Measurements were taken yesterday using a Galaxy Saturn II mobile radio, Heathkit Cantenna dummy load,
and an Autek WM-1 peak reading meter.
Price is $450.00 plus shipping.
I will take pictures of it later today and they will be available if needed.
Contact me direct at:

>for me. A frequency counter is not needed but would be an added plus
>if it doesn't take the price up too much. AM/SSB are a must but CW
>would be a nice added touch.

Uniden Grant LT is the rig for you. If you want to have CW capability, it can be added as a plug-in mod so as to keep the rig legal. This should give you an idea. Although meant for a Radio Shack HTX-10, I'm sure it can be adapted to just about any rig.

http://www.qsl.net/n2ffl/htx10.htm

Just click on the 'CW Mod' button. There's even an anti-freeband message for Aaron and the AKCers. You'll need Adobe Acrobat Here's the direct link.

http://www.qrparci.org/p28.PDF

>I've been looking at the Superstar 3900 but from what I've read it
>tends to wander off frequency too much. I want something solid enough
>to have a conversation with someone.

These work just fine as long as you don't tweak them out. You've also left the realm of the legal. I'm certainly not one to call the kettle black, just advising. They can be had for the outrageously low price of around $120 now.

>Next on the list is the Magnum
>257 or Prostar 400 clone. I haven't heard too much bad about them
>other than having to be modded for the 11meter CB band. I'd prefer not
>to have to take the radio to a tech to be modded or "re-aligned" like
>people say the 3900 needs.

No CW and the radio is basically the modifiable version of the HTX-10. So the CW mod above applies here too. You'll pretty much need to have a decent tech mod/align any non type-certified rig, so you might as well be prepared to swallow that one. (A good alignment is NEVER a bad thing...as long as it's performed by a competent tech.)

>Basicly which model radio am I looking at that will cover these needs
>for less than $200? It's going to be used as a base with a 15amp P/S
>and Antron-99 ant.

Sounds like your looking for a Grant LT (Legal) or a HR-2510/Lincoln. (Not-so legal) Both can be had on ebay for decent prices. There's a pretty nice HR-2510 currently on sale on this newsgoup.

>Solid SSB performance is what I'm looking for. Talking skip is too fun
>and the radio I have now is screwed up on SSB.
>
>So, needs are... AM/SSB, FM is not needed, Power doesn't matter, CW
>would be nice, a frequency counter is not required

Just be sure to stay far away from the 10 meter ham band. (Or the freeband, for that matter.) Not meant as a flame, just use caution and common sense. Listen all you want and learn. Just don't transmit there.

>something I don't
>have to bring to a tech to align or peak/modify.

Once again, nothing wrong with letting a professional align it. Take care and 73.

Ain't that the truth! I had my radio alignment done by a real
tech. He works for the State Police radio shop now. My radio
probably brought him more business then anything. It has it's
limiter and clarifier intact. By letting everyone know who
fixed it, I sent him lots of work.

Hello All:

Want a Linear Amplifier that will turn on the Statue of Liberty's lights, make "ALL" the car alarms go off, open then close all the garage doors, make vast amounts of sprinklers systems turn on or off, be heard over common home Toasters, blank out the local cable television broadcasting guy, send both fish and foul to their last landing, make vast amounts of Florescent Lights in large building complexes flicker on and off, lock up both the east and west coasts, fry eggs on the hood of your car, make horrendous loud and squealing feedback screeching nerve racking noises in cars with loud stereo systems, want that Big Coiled CB Antenna to have that melted down look, if you like the smell of burning belts slipping across massive alternator pulleys under the hood, having to use 2 inch Heliax Coax to the antenna, needing Chevron Supreme Hi Test 100+ Octane accelerate-Oh-go-fast neck snapping Gasoline, Alternator wires the size of heater hoses, Take over and capture the audio from the drive in movie with your own comments, Make rain clouds dissipate, set Mud Duck Radios on fire, heat up the local solar system planets and Moons, or just shoot a little skip.

E-mail me.

Jay in the Mojave

There are a few models of "Back Packer" low power, HF radios that would be
suitable.
Most (all ?) of them are CW (code) only so knowldge of code would be
required.

High frequency (7 or 14 MHz) would get out from most any place.

Really? Can you name a case where a licensed ham operating on ham
bands has been unjustly accused of interference or wrongly penalized
thanks to HR2346 (which enables communities to pass their own laws in
order to enforce CB rules) ???

==========

That was my thinking. I built a few different QRP (low power) radios for the 30-meter band. The entire setup (radio, battery pack, key, and dipole antenna) weighed one pound. I used it a couple of times in the field and it all worked fine.

Yet this rig presented a unique problem, the signal went too far. If you broke your leg in Nowhere, New York you could talk with someone in say Texas or Europe. I suppose this is better than nobody, but it's usefulness is greatly diminished after the first skip. Of course if you were in a very remote region of the world this would be great.

The solution to this problem is to move to a lower band (with a subsequently larger and heavier antenna) or just use 2-meters. I chose the latter.

I wanted to add a comment about a mode of communication used mostly by
the military. It's called NVIS (Near Vertical Incidence Skywave). You
basically lay an HF antenna on the ground and pump a kilowatt into it.
The signal goes pretty much straight up then bounces straight down.
This lets you talk to someone in the next valley over, while hiding you
from enemys with radio direction finding gear on the ground.

This would be great for us backpackers, if someone else carried the
amplifier and generator.

==========

Mention should be made of the ARRL Wilderness Protocol. This encourages hams to listen on 2-meters once an hour for distress signals. Go here for a little more information:

http://www.liscar.org/wilderne.htm

So a 2-meter radio can be affective without a repeater, if there's another radio amateur in the area.

The CW is coming along well. But lately I have been rather busy with the
move and teaching classes ect.

Ever see the movie "Money Pit". I think they wrote that as a prophecy about
my house :/ First weekend the waterheater blew up. Then the water shutoff
valve for the toilet sprung a leak, so I replaced that, then the replacement
cracked so it leaked all over again. The line for the gas dryer decided to
leak. And then this morning the main water shutoff valve in the basement
blew up, I finally got it fixed and restored water to the house by noon. I
will be having a very long talk with the realtor.

100% agree. I was going to ask your opinion on local citizen's
involvment in addition to the yocal locals, but obviously you can see
where that is even worse.

While certainly *some* citizens (hams, CBers, technical service people)
certainly have the
electronics expertise to get involved in such a thing, I would still oppose
that as well. The
problem there is a "vigilante" attitude that might be a factor (revenge,
etc) and the fact that
ordinary folks have no Federal or local police power. Getting involved in
"policing" radio
might have some unwanted and unexpected results, or repercussions, so I, for
one, wouldn't touch that with a 10 foot pole. And some ham clubs have
offered their assistance
to LEOS (I'm told)--some reacting with goody-goody gumdrops glee at the
chance to "show" them people their "place".

Again, I think it should be up to FCC because that was what they were
created to do, and
it takes it out of the local arena where it could flare up into real trouble
between neighbors.

Truth be told, while I don't particularly like the illegal stuff, I figure
that if the ones who insist
on stretching the limits a bit, but stay away from the ham bands, and the
military bands below channel 1, they are not likely to attract too much
attention. The guy who got this
thread started obviously just had a bad-assed attitude, and THAT'll usually
gitcha every time.

Oddly enough, that HF antenna and the kilowatt generator was exactly what was used 30 years ago in the US Army, actually mostly for the Forward Air Controller to be able to call in the B-52 strike. Of course, I was only a tiny child at the time.

Aaron to many conflicting storys and the town cannot make up any law they want to arrest this man they can only enforce exisiting FCC Laws, also the hr 23?? that was passed gave towns the "right" to pass ordinances so they can enforce "FCC" Rules This doesn't give towns the ability to make up there own laws. Which seems to be the case here. I say we need to stop this before alot of people become harrased Ham or Cber. The person your interfering with there equipment doesn't know if your a Ham or a Cb operator. They will call the cops and let them sort it out.

1411. Texas Ranger 6900FTB or RCI 2970?

Newsgroup: rec.radio.cb
Date: 2002-04-17 03:32:14 UTC
From: Mayor <nonelwishtodisclose@nospam.none.ok?>
Message-ID: <216v8.108978$oN6.2386536@news1.east.cox.net>
Source record: 121276

Hi, everyone. I am considering one of two radios to purchase. I am interested in either the 2970DX with 12-10 meter coverage, or the Texas Ranger TR-6900FTB with almost the same amount of frequency coverage. The difference in price is approximately $30, depending on where you go. Which is the better radio? Is it really fair to compare these two radios? I mean, the power output is about the same, as well as the freq. coverage. I think that the Texas Ranger 6900 has echo/talkback, while the RCI does not. $450 or more is a lot of money to spend on a radio, in my opinion, and I want the best deal I can find.

Also....If there are better (or) cheaper radios with the same features, please tell me. I am interested in a frequency coverage from 24-27.995 (or higher, if it happens to have it, already).....Power output maximum of 100-150 watts...Modes-AM/FM/SSB/maybe CW....Frequency counter onboard. I don't care about echo or reverb, but if it comes with it, that is fine. I want a mobile, and not a large base station.

If this makes sense to anyone, and you can help me, your help is very much appreciated. Thanks.

--Mayor

Sure, I'll bite. Look for a used Yaesu FT-840, or any other ham HF rig. Much
better quality than the CB/10mtr rigs available.

Now, the above being said, I will be wearing my flame retardant clothing for
a bit.

Aaron, Twisted, answer this- why not just live and let live? Why is it hams want cb'ers out of the picture and the cb'ers want the hams gone? Hams have thier own expertise and cb'ers do as well. I'm a cb'er (kinda) because I don't have the time and dollars it takes to go ham. And even then, what do I do? I ain't got the room? So now I'm evil? Come on, get a life!

The radio waves are there, why not just use them? Yeah there are rules that everyone must obey. Cb'ers AND hams. Now why can't cb'ers and hams work TOGETHER on getting the real trash out of the picture?

Are you licensed for frequencies below 25 or above 28? I'm not a
ham but I've got real problems with that. Also going below 1 is
not a good idea. The US GOVT has frequencies there. Above 40 is safer.
That only leaves 26.965 to 27.995 and low power if you don't want a visit.

Picture a classroom full of kids. Their teacher, Mr. Federal, is suddenly called away, so the kids are told to behave themselves, and are left by themselves. Weeks go by. Soon, the rowdy kids and the bullies take over and turn the classroom into a zoo. Some of the classes next door complain about the noise.

The school decides that the teacher in the adjacent classroom, Mr. Local, can come in and enforce Mr. Federal's classroom rules, if needed. The bullies in Mr. Local's classroom loudly protest. They tell everyone that Mr. Local has it in for them, and is going to treat them unfairly. They spread stories that Mr. Local is going to punish the good along with the bad. They argue that only their own teacher, Mr. Federal, has the right to discipline them.

Well, from the keyclowns point of view, a local ordinance enabling the courts to bring action against them is exactly like that situation. In their eyes, it's the worst thing that can happen. They know the FCC is "away" and cannot enforce CB. They like the chaotic atmosphere and being able to do literally anything with no fear of punishment. They like the fact that a neighbor who complains about their interference will have no where to go with their complaint. And that's the way they want to keep it.

That's why HR2346 and resulting local ordinances is their ultimate nightmare. For the first time in their life they will be held accountable. Do you blame them for trying to spread the rumor that every local cop is corrupt and will be pursuing vendettas, running amok, randomly hassling innocent legal hams and legit CBers? LOL. None of that has happened of course. But to listen to them you'd think we've been taken over by a fascist state.

Hi, Big CBer. No, I am not licensed to operate on 12 or 10 meters. Actually, I had not intended to operate on the amateur frequencies (24.89-24.99/28.0-29.7). Truth be known, I really don't intend to operate below 26.115. My communications mostly consist of local 40 channel. Occasionally, I do go up above 40...Sometimes to .430, or .475, or where there is dx...Never above 27.500, though. As far as radios go, I guess I figured that I would get the best I could. I certainly understand your stance on (not)transmitting on the Federal Government frequencies.

I have heard that the Fed. Gov. operates on various frequencies above 40 and below channel 1. In fact, the frequencies are listed in my "Police Call" frequency book. I guess the smart thing to do, would be to use low power, haha, regardless of operating frequency. Unfortunately, I have never heard anyone other than freeband CB'ers occasionally, on these frequencies. I wonder what mode the Federal Government is operating on? USB?

Well, catch you later. Thanks for the info. It is probably best to stick with the regular 40 channel CB, and not use too much power (wattage).

> do so.

When this authorization that allowed local municipalities the power to create laws to address interference, the ARRL lobbied successfully for exempting hams from the legislation. Once the license is presented, the matter must be handled by the FCC, as a LICENSED station has certain federal privileges allowing the license holder to operate a radio station according to the rules setforth by the FCC. Nuisance complaints of interference due to poorly designed consumer gear, cannot be used as just cause for forcing a ham to give up his hobby, provided that his station is shown to be setup within the guidelines of good engineering practice, and operated within FCC rules. Consumer devices that fall under FCC part 15, also display a disclaimer that they must not cause, and must accept, any interference, including that which may cause undesired operation.

There are bad hams as well as bad CBers. The difference here is that a CBer can be hassled by local cops if they cause interference. Hams interference problems must be turned over to the FCC for follow up, once proof of license is presented. It may not always be so cut and dry, and some legal intervention on the part of an attorney (preferably one well versed in communications law) may be required to settle the matter.

The bottom line is that hams STILL have more recourse than CBers in this matter, simply becaused they are licensed.

You still don't get it, do you?

Despite your obvious bias toward a ham license and what it stands for,
the fact remains that it does offer you some protection.

If a CBer causes interference and uses occasional profanity, it could be
cause for a local cop to interviene and the local courts to settle the
matter. The defendant will most likely be cited for disturbing the
peace, or some other such public obscenity law, and not a violation of
radio rules.

If a ham causes interference and uses occasional profanity, the local
cop will be stopped at the door the minute the ham presents his license.
The matter can then be turned over to the FCC should they wish to pursue
it, and subsequent infractions can get the ham cited for violation of
FEDERAL FCC rules.

But there are legitimate concerns. First off, a local cop is normally not trained to make a determination of what's legal or illegal. He's only answering an interference complaint. How will he make the determination that a legal CBer's station is legal? More likely the cop will still cite the operator, and the burden of proof will then be on the operator to prove that his station is legal including having a certified technician test his equipment.
If the station is found to be legal, and the interference continues, then what? The neighbor still has a problem, but the radio operator also has the right to operate his station. The specific rule to address this situation is not clear, and leaves open the door to unneccesary harrassment by LEO's on legally operating CBers.

The ARRL recognized the potential quagmire that these local laws could create, so they pushed hard to have hams exempted from HR2346, for just those reasons that I've stated above.

Why sure Jerry,

Please ask him if he wouldn't mind if the FCC rules and regulations were "legislated" via the more traditional (Not to mention, constitutional.) methodology. I want to see the airwaves kept clean just as much as anybody else, but I do NOT like one agency making, enforcing, and interpreting the laws. The FCC rules and regulations DO carry the weight of the law, correct? Heck, if you want to hand out $8,000.00 NAL's, let's level the playing field. NAL...Notice of Apparent Liability. The term itself is almost contradictory to the principle of checks and balances. Just some random thoughts. :-)

Could you also ask him to focus more on the 10-meter Novice/Tech"+" sub-band incursion problem.

And lastly, ask him if the FCC actively enforces the 155.3 mi. limit rule on CB. If not, please advise those who are in a position to do so to pay more attention to the wishes of the constituency most affected by this rule.

Thanks Jerry.

Thanks Mark,

I checked it out and also did a Google newsgroup search and found some pretty pretty promising comments. I'm going to let my brother-in-law use the Pyramid with his TRC-485. I've ordered an Astron RS-7A for use with the Grant and returned the RS-12A to the AR-3500. (Yeah, I juggle my 10-meter rigs.) Now, I'm shopping for something to adequately power my FT-840 @ 100 watts. A good rule of thumb is to divide the power(w) by the voltage(13.8v) and multiply that by 4 to get the required continuous current. So I'm looking for approx. 29a continuous.

Good try, Twist, but no go. If all the recordings were made, the FCC might go after the aforementioned individual for using profanity on amateur radio, but .... the local court has no jurisdiction.
73 from Rochester, NY
Jim<<

Correct me if I'm wrong, Jim, but it already has happened (to hammies) and the FCC has stated publicly they will not get involved IF a locality brings charges....take that statement in context....scenario: the FCC is presented with a complaint by a hammie that was cited for say, "Disorderly conduct" or something similar, because he was using a sailor's language and his neighbors have it all on tapes, PLENTY of it. Let's assume there was at least one prior complaint, followed by a notification by the local government or at least a warning. IT happens again. The operator is cited. He appeals to the FCC for help because he is a hammie. The feds, when presented with these tapes, are going to be loathe to defend this guy when they hear this stuff, especialy if it was presented by a city official. I say they will back off, as was done with a recent jammer.

>When this authorization that allowed local municipalities the power to create laws to address interference, the ARRL lobbied successfully for exempting hams from the legislation.<<

Of course they did. Given the present state of the ARRL, this is not surprising.

>Once the license is presented, the matter must be handled by the FCC, as a LICENSED station has certain federal privileges allowing the license holder to operate a radio station according to the rules setforth by the FCC.<<

There are exceptions to this, as the California agitator just found out. Oh yea, he was licensed, but he wasn't pardoned by the FCC.

>Nuisance complaints of interference due to poorly designed consumer gear, cannot be used as just cause for forcing a ham to give up his hobby, provided that his station is shown to be setup within the guidelines of good engineering practice, and operated within FCC rules. Consumer devices that fall under FCC part 15, also display a disclaimer that they must not cause, and must accept, any interference, including that which may cause undesired operation.<<

Couple that "interference" complaint with bad behavior, particularly, a penchant for anglo-saxon and slang cursing vernacular and this hammie has no protection, especially if he was previously warned.

>There are bad hams as well as bad CBers. The difference here is that a CBer can be hassled by local cops if they cause interference.<<

Again, I refer you to the California case.

>Hams interference problems must be turned over to the FCC for follow up, once proof of license is presented. It may not always be so cut and dry, and some legal intervention on the part of an attorney (preferably one well versed in communications law) may be required to settle the matter.<<

I understand what you folks want this license to do, it simply does not give a hammie a free pass to violate local laws and ordinances. If one of those standards are violated, by means of the hammie's station, just by virtue of having a license does not make him untouchable.

>The bottom line is that hams STILL have more recourse than CBers in this matter, simply becaused they are licensed.<<

Not when it comes to breaking local laws they don't, not anymore.

>You still don't get it, do you?
Despite your obvious bias toward a ham license<<

Your purposely attempted innuendo is incorrect.

>and what it stands for,<<

Oh man! Now a license STANDS for something? What does a hobby license stand for, other than the "permission" to use certain freqs.? See, it's this type of mindset that serves to escalate divison between cbers and hammies.

>the fact remains that it does offer you some protection.<<

Yes, to harmless interference.
Seems you are the one having a hard time understanding, not I......cbers are warned in advance, at LEAST once, in most cases, SEVERAL times, before action is taken, the SAME as hammies. I believe that affords the "get out of jail free, card" status that you feel comes automatically with a hammie license. Now if you are insinuating that continuing to err after a warning, a hammie license can help when they are fially popped, what does that say about the hammie?

>If a CBer causes interference and uses occasional profanity, it could be cause for a local cop to interviene and the local courts to settle the matter. The defendant will most likely be cited for disturbing the peace, or some other such public obscenity law, and not a violation of radio rules.
If a ham causes interference and uses occasional profanity, the local cop will be stopped at the door the minute the ham presents his license.<<

BS! By who and how?

>The matter can then be turned over to the FCC should they wish to pursue it, and subsequent infractions can get the ham cited for violation of FEDERAL FCC rules.<<

Not if local laws were violated. It's hilarious you same few that bitch about freebanding feel a license sets you above all laws except federal law. Federal law has a pattern of NOT interfering with state law except in matters of national interest or security, such as the chad fiasco with Fla. A hobbyist cited for profanity on the airwaves after being taped and warned will not merit such involvment by the federal government, especially to protect the guilty. Can you cite a SINGLE verifiable instance or case where a hammie was abdicated for a non-interference complaint or where the government interceded and said,

"No, your town of Whimsical, USA, must drop any and all charges or complaints, because, you see, this person is a member of a super select group of individuals with special needs and considerations...you see, he holds an amateur license....." Balderdash!

The following are new Error Messages are planned for the next version of Windows.....

1) Smash forehead on keyboard to continue.
2) Enter any 11-digit prime number to continue.
3) Press any key to continue or any other key to quit.
4) Press any key... no, no, no, NOT THAT ONE!
5) Press Ctrl-Alt-Del now for IQ test.
6) Close your eyes and press escape three times.
7) Bad command or file name! Go stand in the corner.
8) This will end your Windows session. Do you want to play another game?
9) Windows message: "You have just made a type mismatch! Shall I format your brain?"
10) This is a message from God: "Rebooting the universe, please log off."
11) Keyboard not attached. Press F1 to continue.
12) BREAKFAST.SYS halted... Cereal port not responding.
13) COFFEE.SYS missing... Insert cup and press any key.
14) CONGRESS.SYS corrupted... Re-boot Washington D.C? (Y/N)
15) File not found. Should I fake it? (Y/N)
16) Bad or missing mouse driver. Spank the cat? (Y/N)
17) Runtime Error 6D at 417A:32CF: Incompetent User.
18) Error reading FAT record: Try the SKINNY one? (Y/N)
19) WinErr 547: LPT1 not found... Use backup... PENCIL & PAPER.
20) User Error: Replace user.
21) Windows VirusScan 1.0 - "OS/2 found: Remove it? (Y/Y)"
22) Backup not found: (A)bort (R)etry (P)anic.

According to a news report, a certain private school in Victoria, BC recently was faced with a unique problem.

A number of grade 12 girls were beginning to use lipstick and would put it on in the bathroom. That was fine, but after they put on their lipstick they would press their lips to the mirror leaving dozens of little lip prints.

Every night, the maintenance man would remove them and the next day, the girls would put them back.

Finally the principal decided that something had to be done. She called all the girls to the bathroom and met them there with the maintenance man. She explained that all these lip prints were causing a major problem for the custodian who had to clean the mirrors every night.

To demonstrate how difficult it had been to clean the mirrors, she asked the maintenance man to show the girls how much effort was required.

He took out a long-handled squeegee, dipped it in the toilet, and cleaned the mirror with it.

Since then, there have been no lip prints on the mirror.

1445. OT: Washing The Dog.....

Newsgroup: rec.radio.cb
Date: 2002-04-17 15:32:34 UTC

Message-ID: <67c9d341.0204170732.53b1a031@posting.google.com>
Source record: 121360

A young boy, about eight years old, walks into the local grocery store and picks our a huge box of laundry detergent.

The grocer walked over, and trying to be friendly, asked the boy if he had a lot of laundry to do.

"Oh, no laundry," the boy said, "I'm going to wash my dog!"

"But you shouldn't use this to wash your dog. It's very powerful and if you wash your dog in this, he'll get sick. In fact, it might even kill him."

But the boy was not to be stopped and carried the detergent to the counter and paid for it, even as the grocer still tried to talk him out of washing his dog.

About a week later the boy was back in the store to buy some candy. The grocer asked the boy how his dog was doing.

"Oh, he died," the boy said sadly.

The grocer, trying not to be an I-told-you-so, said he was sorry the dog died but added, "I tried to tell you not to use that detergent on your dog!"

"Well," the boy replied, "I don't think it was the detergent that killed him."

"Oh? What was it then?"

"I think it was the spin cycle!"

lol, Betty.

1446. NINN (Free Service)

Newsgroup: rec.radio.cb

Source record: 121361

Hello radio hobbyist, I though this may interest you,

Enjoy getting news at it happens in your area?
How about Listening to police/fire scanners?

Either way NINN (National Incident Notification Network)
is a website for you !!!

NINN is a scanner/news hobbyist web site that tracks and
Alerts subscribers to news, and issues happening
in your area. News can be police pursuits, disturbances, robberies
and much more. There is also live fire reports, accidents and hazmat
notices.

We use volunteers to provide this free service to the public to notify
them of such incidents.
Volunteers log into a dispatch system, and type out the information
which then sends it out to
subscribers. Subscribers can receive the notices on any Email capable
device
(Computer Email, pager, cell phone etc...).

If you are interested in volunteering for your area, or subscribing
visit http://www.ninn.org today.
Best of all its free.

I think you may be correct, but I have to qualify it though. I believe
that it may have been tagged on in addition to some other, more
egregious, offenses. Run high power, cause interference, and receive a
visit from "Uncle Charlie," those QSL cards on the wall now come into
play. Sorta like the busted tail light when you get pulled over for
speeding and mouth off...not to mention the obstructed view (dust) wrt
your windshield. I've seen this come into play, it ain't pretty.

> by this rule.

That constituency wants a hobby radio service (that is essentially a lawless version of ham radio) and they have already gotten their answer from the FCC time and time again: "no".

Whoa Dave, The FCC gve no such authority. Towns can only enforce current FCC rules they cannot create there own. And if they have they are against what hr 2346? bill says.
Just because the governement said it is ok for them to enforce FCC rules re: CB ops towns must pass laws that will allow them to carry out this task it doesnt automatically happen when governemnt signed the bill. Re read it carefully

I saw them being sold as "power supplies" at a truck stop once.. It
doesn't matter how you list them, they will be removed by Ebay. If you
list it for 3 days, you MIGHT get it sold before they find it.
Otherwise use Yahoo auctions.. they'll let ya sell anything. :)

To hear the keyclowns talk, he is an ignoramus who can't find his ass from a hole in the wall.

>>They spread stories that Mr. Local is going to punish the good along
>>with the bad.

>If they are ignorant to FCC laws they will and can, if they are properly
>trained different story.

Law enforcement is a constantly evolving field because crime is a constantly evolving problem. Cops can and do get trained all the time for all kinds of highly technical things, from recognizing and spot testing new street drugs to computer fraud. I'm sure when portable computers were first installed in squad cars there were people who said the cops were too dumb to use them.

I agree that there is the occasional exception. But if you happen to live in a town run by "fat dumb corrupt bubba cops", then little ole CB rules are going to be the least of your problems.

I think the local enforcement trend this is a good thing. For one, it'll force all CB hobbyists to understand the causes of RF interference and take steps to deal with it, should it arise. Even if it's not your fault, helping the neighbors understand how they might correct RF problems is the neighborly thing to do.

But it sounds like most would prefer the old way -- i.e. put up a bleed stick, plug in a kicker and give complaining neighbors the one-finger salute.

Hello Group ,

I have an older D & A Maverick amp for sale . Tubes all test above 90 % . 9 tubes total inside. Four 6jt6a driving 4 6lq6 . Box cosmetically is a 7 out of a 10. With 2 1/2 watt drive box swings up to 400 with very low swing. Asking 250 plus shipping costs. Email me with questions or interests.Thankyou for looking.

I would'nt know about "super hero" status. With a ham ticket, providing one stays within the guidelines, you don't have to worry about a knock on the door and the FCC taking your gear.
Thats a good thing I think..:)

1473. Is Ham Rasio a cult?

Newsgroup: rec.radio.cb
Date: 2002-04-18 00:13:25 UTC
From: vshah101@aol.com
Message-ID: <20020417201325.16837.00004185@mb-fx.aol.com>
Source record: 121387

Ham Radio is not the only possible perspective on Amateur Radio. There are some people that like radio technology, but do not like "Ham" radio.

My initial exposure was through some mobile radio troubleshooting and antenna assembly. I set up radios at mobile locations and troubleshooted and calibrated radios. In my calibrations, I went on the air. It was fun working through the radio circuits and seeing its spectrum. Also, it was fun being part of a mobile team troubleshooting electronics and communicating with the other team members through the radio.

Probably, if my initial exposure was though a Ham radio club, I would not have got exited about radios and would have forgot about it. Hams like to blame the internet for people’s lack of interest in Ham radio. I would say the cult like activities turn many people away.

Here’s what one radio enthusiast (now an rf consultant) had to say. I gave up amateur radio, mainly because it was not what I had expected. The idea , I thought, was to further your abilities in radio with self training etc.. instead it involved lots of clique groups of people, committees and clubs who frowned heavily upon non members who dared to push boundaries independently.

Yes, "Hams" own the spectrum. (And I am grateful for use of the spectrum). Yes, Ham radio has a wide variety of activities and modes. But, to be a "True Ham", you must follow traditional "Ham" conventions. I know this may sound like a troll, but this is my sincere belief. Ham radio has many required beliefs and ways of interaction that it seems like a cult. I can give several example of this.

(1) Strange exclusive terminology
One sign that Ham radio is a cult is all that unnecessary terminology. A "rig" is a radio setup. This seems childish to me. Also, all those Q abbreviations. . QRP means low power. QST, QSL, QSO. The number 73 seems to mean you are going to end your conversation. All these secret code like abbreviations get confusing. It tends to keep newcomers out. And, they serve no useful practical purpose.

(2) Morse Code
For one thing "Hams" are insistent on using Morse code. Morse is obsolete. The military knows it. The public knows it (hence the "cult" perception). Probably the FCC would eliminate it, but then Hams would protest. (Ironic, isn't it)? Even now that it is 5 words per minute, some Hams want to increase it to 20 words per minute. They made the test easy so you have to know Morse code (you can’t fake that) to advance above Technician, but not the electronics (you can just memorize the questions and answers).

(3) Contests
Also, Hams seem to like "contests". Contests are not what you would expect the word to mean. A "contest" is represents how many people you can contact in a given time period. This to me is more a measure of rote operating skills than competitive spirit.

The awards are for "how many", not "how difficult". There are awards for contacting every US state (the "Worked All States" award). This seems to prove you waste a lot of time, more than it proves your radio skills. Awards for how long you talk ("Rag Chewer's Club award). It seems like almost all Ham awards are like this.

Direction finding activities, "Foxhunts", seem to be the only Ham competition that could be fun. It is a good measure of rf skills and gamesmanship.

(4) Dislike of "CB"
I told a ham I got a CB radio. He said he felt sorry for me. What is there to feel sorry about? CB people want to use the radio too. Also there is FRS. More personal freedom for particular needs. This is good. But why the disdain for people that use a CB? Why the feelings of superiority? Even if you do know more, why should you dislike people who use another band for another purpose?

mmm...hate to be a raincloud, but lots of hams have CB's...I did'nt give up my CB. CB is a radio. I like radios. :)
The big difference is if I want to dim the lights in the house I do it on 20-160 meters and I'm legal.
As far as CW, some hams like it alot, some use it seldom, some don't use it at all..
I don't do clubs and so do most hams I know (at least in my area.) for that reason. I have friends who have the same interests as me (mostly boatanchors and tube gear.) We can have lots of fun without the politics. Radio is a hobby, not a career.
As far as ham vs CB...you have people who argue about anything. I would'nt judge either one based on the rants of a few compared to the whole.
I got my ticket because it gave me more room to play in and bigger toys to play with without worrying about being "out of band".. :)
Some points are good, but I think your sterotyping alot of good people on both sides.

> THE 10 METER HAM BAND.

Voobie, please call this problem by its real name - OUTBANDER
INCURSIONS INTO THE 10 METER HAM BAND.

Let's get it straight Voob - CBers stay on the legal 40 channels and
do NOT go into the 10m band. Freebanders go outside the legal 40 but
are mostly smart enough to know where they're at and do NOT go into
the 10m band. It's truckers and goofballs that get modified radios and
don't know where they're at that go into the ham band.

Your unwarranted prejudice is showing (again). And what did you say
your amateur callsign is? (heh heh)

> > And lastly, ask him if the FCC actively enforces the 155.3 mi. limit

> answer from the FCC time and time again: "no".

So why did the FCC in its magnificence put CB on a band that's ONLY
good for skip about half the time - when they could easily have put it
on a band that didn't allow for it? They (and you, Voob) need to stop
sitting on their (and your) brains. They're meant for logical thought.

And you're a one-trick pony that doesn't know any tricks.

know
> more, why should you dislike people who use another band for another
purpose?

Odd as it might sound, after nearly 50 years licensed, I come close to agreeing with you once a bit of inexperience is factored out. Taking your points in order:

1. Most of the terminology is old Morse abbreviations which are perfectly legitimate using Morse and totally ridiculous on phone. A lot of it was old hat when the Titanic sank. A certain amount of it is common to hobbies in general, listen to some tournament bridge players after a session and ham-speak is a model of clarity by comparison. Simple solution, don't do it and perhaps a few will take the hint.

2. Morse is a sore subject for a lot of reasons. I did my 20 for the FCC but I really do not see a regulatory purpose in it any more nor does my father who was a military op in 1940 on the main transcon net from WAR to the Presidio in San Fran. Those of us who like CW generally feel the 5wpm requirement does more harm to the art than good by teaching it in a way that requires unlearning to actually be any good at it. But it sounds like you have gotten your knickers in a twist over what amounts to a degenerate Nintendo game. Morse testing is at the moment a matter of the Geneva Radio Treaties so Amateur opinion is a big machts nichts.

3. I am not a contester so I don't contest and bip over to the WARC bands (30, 17, 12 meters) and enjoy life. I have a particular twitch with number collectors so before going on 10, I use my computer calculator to add several credit cards, my phone and SS numbers, drivers license number, etc. and multiply by the current barometric pressure in millibars. When asked for a number I give my 'Universal Number'; as it grows to 14 digits or so the message is delivered. They have their thing, I got mine.

4. Dislike of CB or dislike of particular CBers? Granted there is the remnants of what used to be a major status game in progress and the Lifer Techs piss on CBers because coded types piss on them and for essentially the same reason. CB is interesting but real radio it is not nor is VHF. So telling CB war stories is guaranteed to piss off the coded types and OTs; selling an imitation as somehow equivalent to the real thing is not the way to win friends and influence people in any hobby. And a certain amount of it is designed to keep you working toward the General, which is

in fact the entry to the fraternity, before getting shunted off bellowing into a mike on the local repeater.

And there is an opinion, which I share to an extent, that everyone who has a legitimate use for CB within the rules is long gone to FRS, community repeaters, exclusive RC freqs, etc. leaving poseurs, idiots, and head cases. Kind of like Mississippi, everyone with brains and/or ambition is gone.

You need a antenna matcher Bert........Yeah.......An antenna matcher would fix you right up..............But then again.........It must be a real bitch to figure out how to cut wire to a certain length.
Train
PS.............What's up with the Peter Luger thing? I'm getting hungry out west here!

I am sorry that the clubs in that area are like that, In my
experiances so far though in my traveling, the clubs have been very
friendly, and eager to encourage people to either get their first
ticket, or to advance their knowledge of the radio service. Since
getting my license the local club members have went out of their way
to help me get setup and I am not even a member of the club. One
member drove 40 miles out of his way to drop of a set of plans so I
can try to home brew cubical quad antenna, another let me borrow a 2m
mobile rig until I had the time to get one. Several of them helped me
move to my new house, and 2 more are coming over to help me put up my
new tower. I know CBers that would do the same, and I started out on
CB and the hams in the area are cool with that.

>

>

I have in my collection of old cb and amateur radio magazines some old
amateur study guides from the 40s and 50s before the no code tech was
available, let me tell you, the book for tech :Now You're Talking" is
alot more comprehensive than those books back then. And the code is
required by international treaty.

>(3) Contests
>Also, Hams seem to like "contests". Contests are not what you would expect the

How is posting a link a "TOS" violation to any ISP (unless it directs you to kiddy porn or the like) in the free world? The link posted is to nothing but a web page that in and of itself DOES NOT offer a single thing to be sold. The link posted is nothing but a listing of other web pages available to visitors of the website (www.bigradio.biz). I'm sure they had a good laugh at your expense on this one. Options are now illegal according to this crybaby!

Dick, you really are an ass. For some reason, you think you can come here and feel like you will garner respect. Far from it, you are an ass, and that's it. You are not a prophet, an old-timer, or any such guru. You are a middle-aged man with too much time on his hands. Are the bingo halls closed? Take too much blood thinner?

Above all, you are a trip...and that's that.

Bert, who cares about SWR? My best antenna was NOT resonant. It was several hundred feet of 8 gauge wire running between 20 and 40 feet in the air. I simply tuned the thing with the pi network and used it on everything from 1.8 to 21 MHz. It worked wonderfully. When a friend was over in the shack, I heard a net on 80 meters .... I had the rig in STANDBY (not tune - no drive to the final) and gave a quick blip. They came back. Yep, running milliwatts, I was working South Carolina. What the hey, I could work any of the lower 48 on 1.8 MHz running 25 watts at night. A friend of mine bragged he could work the Carolinas on 75 at night with his 600 watts - ok, I was talking all over the U.S. on 160 at that time. 'Taint the size of the ship, 'tis the motion throught the ocean. Use a tuner.

I don't need your respect, Junior. It is nice to have a degree of respect among those who are worthy of mine but I do not now and haven't for a long time run my life as a popularity contest. I call's 'em like I see's 'em. Now go back and play with your blocks.

Well, it'll serve 'em right if they can't make a decision. The
situation is really hillarious. Now, pass a stupid simple test, get an
EXTRA class ticket, and get a call sign of your choice for ten bucks (or
whatever the going rate is today). Heck, I'm considering asking for
WN2CJV (my original novice ticket) and see if I can get some of the new
extra class tickets in a nice QSO. Nice and easy. Not too fast (unless
they want to speed it up, in which case I am willing to do so).
Say 30 or 40 WPM ... Of course, at my advanced age, I might be hard
pressed to do a whole lot more than 40 ... maybe ... then again ....

Troll.

Ham and Amateur radio is the same thing. CB is not Amateur radio, neither is
FRS or low power FM broadcast stations. Check out my homepage and click on the
link that tells how Amateur's became known as hams and you'll understand.

Dear Mr. Voobmer,
I don't suppose it has occured to you that many ham operators go to that
cb newsgroup because..they still own citizen band transceivers and enjoy it.
Further, most everyone (with the exception of you of course..) knowing
this bit of trivia; these same ham operators may be interested in this
equipment.
Just as many in radio-phono newsgroup do not have ham license but are
interested in ham receivers.
In short Mr. Voobner.....get a life..

Logical thought would be asessing what year the Citizens band was
created and what the spectrum needs were at that time vs. what they
are now. Try it. You may come up with an asnswer you won't like.

Regardless, your argument is Classic Jailbird thinking, e.g. "It's
their fault I robbed their house. They didnt lock the door?"

> And you're a one-trick pony that doesn't know any tricks.

At least I'm an equine and not a reptile like you, LOL.

Now was that nice? While I may not agree with someone's reply, I don't
think it's appropriate to respond like this. I can't even bring myself
to insult Aaron, much less somebody like Dick who actually CONTRIBUTES
to the NG. You and I are cool, no offense...but I think you're a bit
o'er the line on this one.

It seems your antenna was experiencing interference from some objects that
were in close enough proximity. An antenna manufacturer has no control over
this... it is up to the installer to make sure the antenna is operated in
"free space". That is what the antenna was designed for...

This one's really not as prevalent as you might think. I know, because
I used to swear that this was the case with 70% of all hams. NOT!
Actually, quite the opposite. Once you get someone to warm up to you
and relax their guard, you'll usually find that there was a 27 MHz
"rig" somewhere in their past. I have run into the phenomenon that you
describe, but thankfully they're few and far between. I still keep a
good CB set up in the shack. What about the folks that I want to talk
to via radio that are not interested in or ready for amateur radio.
One brother-in-law runs a Radio Shack TRC-485 and the other a Cobra
146GTL. We chit-chat back and forth and when the ionospheric gods are
smiling, we...er, I mean THEY chit-chat with other folks. That's the
easiest hook into ham radio and I don't have to "sell" a thing.

Don't hams have enough newsgroups to discuss ham stuff? And with all
those other ham newsgroups just as accessible as this one, why would a
ham look on rrcb, or any other newsgroup for that matter, to discuss
what is meant for a ham newsgroup? What newsgroup are they going to
claim next: alt.healt.dental-amalgam? Perhaps you missed the FAQ: This
is a CB newsgroup, and if you are a ham then leave your ticket at the
door.

I did, and there are some cases where the towns can make specific laws
(Like limiting antennas), to address potential interference problems.

In most cases though, it is not FCC rules that are being applied here,
but local laws (such as disturbing the peace) that are being applied to
certain types of interference.

> hammies.

Your failure to acknowlege what the license stands for, is what
escalates further division between Cbers and hams.
Despite what you may think, the license had to be worked for to get
(Even though the tests have gotten pitifully easier in recent years),
and is supposed to demonstrate that the license holder at least
understands the basics of radio operation and theory. THAT is what it
stands for. And even if you don't feel that this is a valid claim, it is
still one better than what a CBer has, which is NOTHING.

The difference is that a hammie-gone-bad will be popped by the FCC, not
the local-yokels, and will likely stand to face harsher penalties.

>
> >If a CBer causes interference and uses occasional profanity, it could

> license.<<
>
> BS! By who and how?

The wording of HR2346 specifically exempts hams from this legislation. Therefore, once a local cop sees that he's dealing with a licensed ham, they lose authorization to continue, and the matter must be forwarded to the FCC if it is so warranted.

>
> >The matter can then be turned over to the FCC should they wish to

>
> Not if local laws were violated. It's hilarious you same few that bitch
> about freebanding feel a license sets you above all laws except federal
> law.

Some gratification. Federal law usually carries much tougher penalties. But the fact remains that the language is in HR2346 exempting hams.

> Federal law has a pattern of NOT interfering with state law except
> in matters of national interest or security, such as the chad fiasco
> with Fla. A hobbyist cited for profanity on the airwaves after being

Nobody is protecting anyone. Profanity on the air is a violation of FCC rules, and the FCC will deal with it.

> Can you cite a SINGLE
> verifiable instance or case where a hammie was abdicated for a

I cannot cite a specific case since the legislation is so new, and I don't think there has been any published examples. But just read the legislation yourself.

The FCC will not defend the guy, they will bust him for violating the
rules, which will likely result in a bigger fine, and possibly the
suspention/revocation of his license.

The difference is that it the FCC's job to handle hams. In the case of
CBers, that job has been farmed out to local LEO's as well.

To answer that question, you need to remember the timeframe, and the technology available at the time the class "D" band was created. It was very expensive to make reliable gear for UHF and VHF frequencies. UHF (Where the then class "A" CB band was) is also prone to strict line of sight propagation, which makes any sort of meaningful distance tough unless you're mountain topping. This was also a time before there were repeaters.
The FCC also had to consider spectrum allocations for commercial and broadcast users. There really wasn't a "good" band available to put the class "D" CB service in. When the hams lost 11 meters, the FCC thought that it would put the CB service there, since no one really wanted the band, as it was shared with ISM devices that caused interference. The FCC did not forsee what the class D CB band would evolve into, and DX was not an issue in their minds then.

Technically, if they are not on the CB band, using type accepted CB
gear, they are not CBers. They are radio pirates, or outbanders. Much
the same as if I dialed in a 155 MHz frequency and used it without a
license. Am I a CBer then? Of course not.

I prefer to to think of "CBers" as legal operators. The rest of the
riff-raff are some thing entirely different......

1521. Lincoln/HR-2510 Question?

Newsgroup: rec.radio.cb
Date: 2002-04-18 12:29:06 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0204180429.24ba2faa@posting.google.com>
Source record: 121336

Howdy all,

Has anybody ever run into "the incredible melting light bulb" issue with their Lincolns/HR-2510s? Here's a pretty coll link re. the Lincoln/HR-2510 that also makes mention of this problem.

73 de Bert
WA2SI

Disclaimer: I'm asking this question on r.r.cb because in the real word, I'm more likely to get the answer here rather than on the amateur newsgroups. (Wrt this particular model radio.)

1522. Looking for ....

Correct Dave,
This is nothing new, it happened many
years ago in San Bruno Ca. This person
was running lots of power and was trashing
TV's and talking trash. The FCC did nothing, so
the neighbors got together, made recordings
and video tapes and took him to small claims
court for hampering their way of life.
They Won! and it cost him much more than
what the FCC would've got him for. Now it's
the same principle for local law, they can go
after you for disturbing the peace and such
style of laws.

Message-ID: <26448-3CBED7A7-7@storefull-2313.public.lawson.webtv.net>
Source record: 121346

>Your failure to acknowlege what the license stands for, is what escalates further division between Cbers and hams.<<

Wrong. Your problem is with other other radio service operators NOT looking at the license as a shrine or holy grail..not our problem, it's YOURS. The license means squat to those that choose not to persue it, and your kind has a problem with it.... that's what divides.

>Despite what you may think, the license had to be worked for to get<<

This is purely your opinion. What is "work" for you is kid;s play to some of us, CW included, so no, there is no real efffort in obtaining a license, especially at entry level.....so you see, it's not what "I" think, it's merely you not being able to see any angle but your own.

>(Even though the tests have gotten pitifully easier in recent years), and is supposed to demonstrate that the license holder at least understands the basics of radio operation and theory. THAT is what it stands for.<<

Most long time cb ops, and certainly the ones that frequent here are familiar with BASIC radio operation and theory (some,....more), sans license.

>And even if you don't feel that this is a valid claim, it is still one better than what a CBer has, which is NOTHING.<<

Ha ha! You assume way too much. You have no clue if a cber has a license or not. Whether he does or doesn't, it fails to make you "better" somehow, because you hold a license....I'm still laughing at that....that mindset is the epitome of the problem between cbers and hammies, and you shrug your shoulders and point fingers to others when your actions based on your mistaken thoughts and interpretations are flawed.

>the fact remains that it does offer you some protection.<<

Yes, to harmless interference.
Seems you are the one having a hard time understanding, not I......cbers are warned in advance, at LEAST once, in most cases, SEVERAL times, before action is taken, the SAME as hammies. I believe that affords the "get out of jail free, card" status that you feel comes automatically with a hammie license. Now if you are insinuating that continuing to err after a warning, a hammie license can help when they are fially popped, what does that say about the hammie?

>The difference is that a hammie-gone-bad will be popped by the FCC, not the local-yokels, and will likely stand to face harsher penalties. If a CBer causes interference and uses occasional profanity, it could be cause for a local cop to interviene and the local courts to settle the matter. The defendant will most likely be cited for disturbing the peace, or some other such public obscenity law, and not a violation of radio rules.<<

Ha! That's BS! There exist multitudes of "hammies gone bad." If you can't find them on your own, many of us can point you to the proper freqs where you can witness this yourself. I can even point you to a group of extremely frustrated hammies that have HUNDREDS of hours on tape of "hammies-gone-bad" that have reported it to the FCC repeatedly with the classic canned reply. Thank God 2346 allows local charges to be brought. You few malcontent hammies reduntantly keep saying that a hammie is protected, but the Feds have just shown otherwise with the LA case..not only did they back off when they were approached for protection by a guilty-as-sin-hammie that was facing local/state charges, they replied with what is more than likely a precedent-setting statement..they will NOT get involved when charges are brought. An exception to this rule MAY be a simple interferece complaint. You wanted enforcement, it's clean-up time in your own yard first, then, IF they can get the hammie back yard to quit smelling like a cesspoole, then and only then, may cb scofflaws get some attention. At least the feds recognize what service is in big doo-doo and needs attention quickly.

If a ham causes interference and uses occasional profanity, the local cop will be stopped at the door the minute the ham presents his license.<<

BS! By who and how?

>The wording of HR2346 specifically exempts hams from this legislation.<<

It's not a blanket exemption. The LA case proves your interpretation wrong. What just took place is exactly what you claim doesn't, by virtue of him being licensed.

>Therefore, once a local cop sees that he's dealing with a licensed ham, they lose authorization to continue, and the matter must be forwarded to the FCC if it is so warranted<<

You really don't understand this legislation.

The matter can then be turned over to the FCC should they wish to pursue it, and subsequent infractions can get the ham cited for violation of FEDERAL FCC rules.<<

Not if local laws were violated. It's hilarious you same few that bitch about freebanding feel a license sets you above all laws except federal law.

>Some gratification. Federal law usually carries much tougher penalties. But the fact remains that the language is in HR2346 exempting hams.<<

Federal law has a pattern of NOT interfering with state law except in matters of national interest or security, such as the chad fiasco with Fla. A hobbyist cited for profanity on the airwaves after being taped and warned will not merit such involvment by the federal government, especially to protect the guilty.
Nobody is protecting anyone. Profanity on the air is a violation of FCC rules, and the FCC will deal with it.
Can you cite a SINGLE
verifiable instance or case where a hammie was abdicated for a non-interference complaint or where the government interceded and said, "No, your town of Whimsical, USA, must drop any and all charges or complaints, because, you see, this person is a member of a super select group of individuals with special needs and considerations...you see, he holds an amateur license.

>I cannot cite a specific case since the legislation is so new, and I don't think there has been any published examples.<<

I didn't just make this up, do some actual leg work, my good man, and come back here and tell me what you found. Yes there is a published example, you apparently are not familiar with the finer details of the case. Of course, you are always free to believe whatever you wish and ignore the facts (such as the LA case) and continue claiming that a ticket is a free ride to break laws that cbers will be punished for.

>But just read the legislation yourself.
Dave
"Sandbagger"<<

I did..I even tried to explain it to you,,but your other agenda (evidenced by your comment that a license makes you "BETTER" than other non-licensed communication enthusiasts) has skewered your objectivity.

>The FCC will not defend the guy, they will bust him for violating the rules, which will likely result in a bigger fine, and possibly the suspention/revocation of his license.<<

Please, for the sake of knowing what you are talking of, check the LA case.

>The difference is that it the FCC's job to handle hams.<<

Oh? Was that someone else using your pc last year that claimed the FCC was preparing to go after cbers in a large way?

<In the case of CBers, that job has been farmed out to local LEO's as well.
Dave
"Sandbagger"<<

(Sigh) It was a delegation (read: derelict) of duties, illustrated by the lack of action taken by the FCC against cbers. When this legislation was passed, it was hailed in here by you very few as the second coming....those of us that were aware what time it was told you the reality of the situation but y'all thought cb prisons were gonna be built...reality is finally settling in (see LA case).

>I think you may be correct, but I have to qualify it though. I believe that it may have been
tagged on in addition to some other, more egregious, offenses.<<

Probably.

>Run high power, cause interference, and
receive a visit from "Uncle
Charlie," those QSL cards on the wall now come into play.<<

I wondered about that, also, or if anyone has any info on a case where the cards or a log book was actually entertained as evidence. I would venture to say that it probably was, seized in a confiscation raid.....at least that's how they bust true pirate ops (on your commercial FM dial....87.5 for example <g>) and manage to bring charges against other outside parties, based on records, invoices, anything written or recorded in any manner that was seized. For example, if Mr. Fireside had a big hoe-down on one of the beach islands, and advertised it by donating a few bucks to the pirate station and they happened to "mention" the party on the air, and an entry was found somewhere in the station with Mr. Fireside's name during the raid, suddenly Mr. Fireside receives a subpoena.
In my opinion, however, a much graver offense has taken place...the pirate radio station has now curtailed to payola, compromising it's "pirate" status and for all purposes, has joined the rank of the rest of the canned BS! For it is no longer is a true PIRATE station, merely an illegal one.

>Sorta like the busted tail light when you get pulled over for speeding and mouth off...not to mention the obstructed view (dust) wrt your windshield. I've seen this come into play, it ain't pretty. 73 de Bert WA2SI< <

Lucky I have all this water around me and plentya audio, otherwise I might have had to resort to giving in to an inexcusable and unpardonable temptation, purchasing one of them competition type amps,,,then I would be faced with WHICH one...nah.....I'm cool doing what I have been doing for the last 30 years...DXing as I do, although there IS a certain individual that shall remain nameless among us, who has managed to stoke my appetite, maybe even something from the builder of his box (real nice work, by the way, can't wait to hear it). Of course then I would have to have the can full of oil......

1535. OT: SCAM ALERT.....

Source record: 121397

WARNING:
If you get an envelope from a company called the "Internal Revenue Service," or "IRS,"
DO NOT OPEN IT! This group operates a scam around this time every year.

Their letter claims that you owe them money, which they will take and use to pay for
he operation of essential functions of the United States government.

This is untrue! The money the IRS collects is used to fund various inefficient and
pointless social engineering projects.

This organization has ties to another shady outfit called the Social Security Administration,
who claim to take money from your regular paychecks and save it for your retirement. In truth,
the SSA uses the money to pay for the same misguided make-work projects the IRS helps mastermind.

These scam artists have bilked honest, hard working Americans out of hundreds of billions of dollars.
Don't fall for this scam!

lol, Betty

1536. OT: Little Tommy's Lesson.....

Newsgroup: rec.radio.cb
Date: 2002-04-18 15:24:08 UTC
From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0204180724.5206db8a@posting.google.com>
Source record: 121401

Little Tommy was doing very badly in math.
His parents had tried everything: tutors, flash cards, special
learning centers.
In a last-ditch effort, they took Tommy and enrolled him in the local
Catholic school.

After the first day, Little Tommy came home with a very serious look
on his face.
He didn't kiss his mother hello. Instead, he went straight to his room
and started studying.
His mother was amazed. She called him to dinner. To her shock, the
minute he was done
he marched back to his room without a word and in no time he was back
hitting the books
as hard as before. This went on for some time, day after day while his
mother tried to
understand what made all the difference.

Finally, Little Tommy brought home his report card. He quietly laid it
on the table and went
up to his room and hit the books. With great trepidation, his mom
looked at it. To her surprise,
little Tommy got an A in math. She could no longer hold her
curiousity. She went to his room
and said, "Son, what was it? Was it the nuns?"
Little Tommy looked at her and shook his head, "No!"
"Well, then," she asked, "was it the books, the discipline, the
structure, the uniforms?
WHAT was it?"

Little Tommy looked at her and said, "Well, on the first day of
school,
when I saw that guy nailed to the plus sign, I knew they weren't
fooling around!"

lol, Betty

By his own admission, Aaron is not a HAM. Over a year ago he said he was studying to take the "test", whatever that means. Draw your own conclusions.

Aaron is not a real person and is just some fool Republican, Christian Coalition Type that can't stand the thought that others are having fun and must do everything possible to put a stop to it. Fun = Bad, in Aaron's view.

Probably doesn't dance either. :-)

Jeff

Given that the near field goes out to more or less two wavelengths, anyone
got a 44 meter elipse to hang a lousy 11 meter dipole in???

I can appreciate the emotion but there are two slight problems:

1) I refuse to pretend to be someone and something I am not.

2) The CB newsgroup was set up at the same time as the rest of rec.radio
by -- wait for it -- hams.

Source record: 121409

I have a Midland 79-290 mobile (only CB that would fit in 4Runner) that I use w/ old 300w linear. Stock mic is lousy. Any recommendations? I do off-road stuff and mainly need to keep in contact with a few other vehicles spread out over a mile or two. Was considering Astatic Road Devil RD 104E, but would appreciate any input.

Thanks,
Eric

Due to the high volume of criminal activity in the CB newsgroup, my family asked me not to post any further personal information here. I will comply with their wishes.

>Aaron is not a real person

I beg your pardon. Who do you think is writing this, a machine?

> and is just some fool Republican,

Where do you get that???? Just because I don't agree with illegal operation I don't like fun? Now Man, you keyclowns are warped.

>
>Probably doesn't dance either. :-)

Of course I do. I play the accordion, sing, and dance the watusi on occasion. Just because I don't break FCC rules doesn't mean I'm not a fun guy.

Nobody said you need to. But if you wanted to talk about green
left-handed smoke changers, wouldn't it make sense to go to
alt.hunting.wild-geese?

>2) The CB newsgroup was set up at the same time as the rest of rec.radio
>by -- wait for it -- hams.

Absolutely correct. What's your point? That hams created rrcb to get
rid of the CB discussions in the ham groups? Or that they were doing
CBers a favor for which we should all be grateful? Most of us live in
buildings that were built by somebody else.

It helps when the you are the last vehicle trying to talk to front vehicle,
vehicles have spread out, and you are in somewhat rough terrain. Usually
don't have to use the whole 300 - but using it at half power is usually
enough to punch through.

....we bring you another exciting episode of

"CB JAIL"!!!!!!

MUSIC: THEME FROM DRAGNET

THE SCENE: A LONG DOUBLE ROW OF CELLS. SHOTGUN-TOTING GUARDS PROWL OVERHEAD ON CATWALKS. SEARCHLIGHT BEAMS SWEEP THE BARRED WINDOWS.

CLOSE ON ONE CELL. Train rakes a tin cup back and forth against the bars.

TRAIN: Let me outta here dammit!! I wuz framed!!! I didn't offer ta sell no amps on rec.radio.cb! It wuz just a link, ya hear me? Just a LINK!!!

Behind him on his cot, JEFF MAYNER hunches in a tight ball, rocks back and forth, and weeps.

JEFF: Please someone get me out of here! I can't take it anymore! The yelling..the profanity....the brutality.

TRAIN: Shut up, fish! You'll take it and LIKE it, or you'll wake up with a base-loaded Wilson up your @%$!

MOPARHOLIC (FROM NEXT CELL): Quiet ya bums! I'm tryin' to read!

TRAIN: Lemee see!

MOPARHOLIC passes a magazine through the bars of his cell and into TRAIN'S. TRAIN eagerly rips open the glossy centerfold.

TRAIN (LOOKING AT PHOTO): Ohhh YEAH! A DAVEMADE 32 PILL! That's one really righteous set of blowers! YEAH baby, what I could do with you!

JEFF: Oh boy, can I see? Can I see?

TRAIN: Shaddup, mud duck! This here is for REAL MEN, not sissies like you.

JEFF: You big meanie!

TRAIN: That does it. I'm gonna...

MOPARHOLIC: PSST! Cheez it! The SCREW's comin!!!

LELAND SCOTT approaches carrying a big set of keys, He unlocks Train's cell door.

LELAND: OK, OK, new fish comin' in. Make room!

He shoves the new guy into the cell with them. It's LANDSHARK -- wearing a tight fitting satin ball gown and a blonde wig.

LANDSHARK: (seductively) Hi fellas!

TRAIN: Oh NO! Not another sissyboy!

JEFF: Thank GOD!

MUSIC STING.

Tune in next time...for another episode of....

"CB JAIL!!!"

I would like to see where it says this Dave? Can you post a refrence from
FCC

> In most cases though, it is not FCC rules that are being applied here,
> but local laws (such as disturbing the peace) that are being applied to
> certain types of interference.

Well Dave who determines if the Cb operator is legal or not? For them to be
fined they must be found to be breaking FCC laws. What If I am running a
legal; station and I bleed you over I have done nothing wrong, it is not my
fault you run shoddy TV stereo, phones...
Like I said please provide a case or some reference by the FCC saying they
can do this.

1561. KW7 Firestick vs. 102 inch SS Whip (Real world)

Newsgroup: rec.radio.cb
Date: 2002-04-18 22:29:45 UTC
From: dales88@cox.net
Message-ID: <4a50dd38.0204181429.49bd481@posting.google.com>
Source record: 121426

I have a full size dodge van. I installed a 102" SS whip with ball and spring, making it 108" overall.

Reception was terrible... SWR was 2:1 or higher on all channels. The reason is, I had to mount it on a rear spare tire carrier. The 102" whip was radiating more at the bottom, close to the van's body and the ground plane was all messed up.

I bought a Firestick KW7... screwed it onto the mount... checked SWR, and thought maybe my SWR meter broke... it didn't even move ;)

The antenna is mounted on the top brace of the rear spare tire carrier... towards the rear left of the van with a good 75% of the antenna above the roof of the van.

Actually driving the van on the freeway lowers SWR even more.. completely flat at 75 mph.

I can also hear better... it picks up distant signals really well.

So much for the 102 whip ;)

>Ham and Amateur radio is the same thing. CB is not Amateur radio, neither is
>FRS or low power FM broadcast stations.

You seem to be missing the point I was making. I have been to Ham radio meetings. I have learned that a "Ham" is someone that believes in the conventions of "Ham radio". I have stated what some of those conventions are in my previous post.

My point is that there are people interested in other aspects of amateur radio. There are people who do not want to use the jargon, who do not like contesting or morse code. These people are more interested in the technical aspects of amateur radio.

I do not like calling radio setups " rigs". I do not like using the word "Ham" or "Elmer". I like to use plain language whenever possible, not codewords, such as QRP. I do not like collecting QSL cards. However, I do like circuit design, antenna setups, foxhunts, field tests of transmitters and receivers. I would like to actually learn about radios to have the knowledge to pass a licence class, not just memorize the questions. I know there are others who also have the same interests in amateur radio, but not "Ham" radio.

I hope I have clarified, what I mean by amateurs that are not "Hams".

Simple solution, too: Insert a 10-ohm resistor in series with the bulb.

If you really don't need the linear to run skip or such, and just want to
talk a mile or so, dump the linear and get an Astatic 575.

Interesting concept. The only time I've done calibrations was either
into a dummy load, or in an anechoic chamber (stray emissions from that
lab were rated at something like -120 dB). Of course, you may simply
be referring to talking with other team members on some kind of business
radio or cell phone while making spectrum analysis of the signal you
were checking. Or was this a shoot-out?

>It was fun working through the

You can further your abilities. It DOES depend upon whom you are
hanging around with. Unless that codeless tech is doing eme operations
or atv or something more constructive than yakking on the local 2 meter
repeaters, you aren't likely to learn too much hanging with him. I
must assume, by your comment, that you believe that CBers are more
technically astute than amateurs? You imply that one can't learn from
hams since amateur radio does not further your abilities whilst CB radio
DOES? Yes, I would like to understand what you have learned from CB.

> Yes, "Hams" own the spectrum. (And I am grateful for use of the spectrum). Yes,

> confusing. It tends to keep newcomers out. And, they serve no useful practical
> purpose.

Those Q signals are silly on phone, but useful on CW. Then again,
not as silly as saying something like 'the preferred first personal is
... '. I guess both services have some folk just enamoured with, well,
let's just say sillyness. BTW, I note a lot of folks on the internet
have their own little abbreviations, huh? LOL

> (2) Morse Code
> For one thing "Hams" are insistent on using Morse code. Morse is obsolete. The
> military knows it. The public knows it (hence the "cult" perception). Probably

> words per minute. They made the test easy so you have to know Morse code (you
> canâ□□t fake that) to advance above Technician, but not the electronics (you
> can just memorize the questions and answers).

Morse code may have outlived its' usefulness. Since there are still
international agreements, Morse still lives. That said, I'd like to
point out something about 'speed' and 'accuracy'. If you have to relay
a list (such as 'the following streets are flooded: Hague Street, Ries
Street, ...), you run into a couple of problems. A friend of mine,
who is having work done on her car on Hague Street, pronounces it
'hayg-you'. Hmmm. Ries Street used to be Reese Parkway, thence the
locals call it Reez rather than rise. First problem is spelling. Best
mode would be digital. Keyboard. Next might well be cw. Surprise.
Why? If you have two decent operators, the speed will likely be carried
out without error at 25 or 30 words per minute. None of the voice 'I
spell hague, hotel alpha golf uniform echo .... hotel alpha golf uniform
echo'. Heck, the cw ops would be done before you've correctly
transferred the proper spelling of the street name. Same can be said
for surnames. Not everyone is Smith or Jones. I've received, at 40
words per minute, a typewritten PAGE without error when I was in the
Navy. I am NOT suggesting cw as a first choice, but I'd bet on it
with two good ops over voice with a couple of rookies. Hmmm ... 40
words per minute. How fast can you type? Or do you simply cut and
paste (difficult with only a radio)? Sure, we can all talk much faster,
but accuracy just might count. Again, a digital mode would be the
proper choice here, but ...

> (3) Contests
> Also, Hams seem to like "contests". Contests are not what you would expect the
> word to mean. A "contest" is represents how many people you can contact in a
> given time period. This to me is more a measure of rote operating skills than
> competitive spirit.

This is personal - it only takes skill with lower power. Some idiots
love to run their 1.5 KW rig into a 6 element beam and simply call on
some stations frequency, regardless of where he is listening. DXCC is
not doing amateur radio any service. Frankly, a lot of hams are NOT
into contests (then again, a number of them are. To each his own.)
Say, did I mention 'shoot-out' earlier? Now tell me again how stupid
the ham contests are (and don't forget to mention how 'intelligent' the
CB shoot-outs are!!!!).

> The awards are for "how many", not "how difficult". There are awards for
> contacting every US state (the "Worked All States" award). This seems to prove
> you waste a lot of time, more than it proves your radio skills. Awards for how
> long you talk ("Rag Chewerâ□□s Club award). It seems like almost all Ham awards
> are like this.

Again, not everyone is into 'contests'. I've had interesting chats with
a gentleman who teaches theoretical physics at the University of
Rochester. It was an interesting chat as I have an interest in the
subject. Have also had interesting chats concerning emi/rfi reduction.
I've chatted about various propogation modes. How many 'interesting'
subjects have you chatted about on CB? BTW, note my previous comment
on CB shootouts. While we are at it, isn't BTW kinda stupid? ROFLMAO
Guess we all have our little idiosyncrosies, huh?

> Direction finding activities, "Foxhunts", seem to be the only Ham competition
> that could be fun. It is a good measure of rf skills and gamesmanship.

Foxhunts ARE fun ;)

> (4) Dislike of "CB"
> I told a ham I got a CB radio. He said he felt sorry for me. What is there to
> feel sorry about? CB people want to use the radio too. Also there is FRS. More
> personal freedom for particular needs. This is good. But why the disdain for
> people that use a CB? Why the feelings of superiority? Even if you do know
> more, why should you dislike people who use another band for another purpose?

Many hams don't look down on CBers. Do NOT take the examples of a few
loose cannons in the newsgroup to be representative of all. As far as
FRS, it works like a very low power version of 2 meters, 220, or 440
MHz except there are no repeaters and no practical way to increase the
range (except to get to a very high location). It isn't about
superiority, it is all about choices.

Always liked that amp. It has sentimental value to me. I guess that thing
was made around 1970??
Sound right? Is that the dual power Maverick?

Bert, although I know not a sole in Mississippi, Dick's little quip was totally unjustified...as are many others he's made in the past. Yes, Dick does contribute, and is very intelligent...that's a given, but he also says things he would not say in person. You don't condemn the residents of a whole state for screwed up state government or whatever is wrong there.

I can't believe that you think us ham's are a causing a disgrace to the "citizens" band by posting an ad selling something. Do you want to see disgrace? Take a listen at the 10 meter band on a HAM radio and listen to all the "hash and trash" that's being transmitted illegaly by the "citizens band" Lets get even simpler. I can go a whole day, or a whole month without hearing one swear word on my local repeater, or one slander towards anybody. But, oh no, god forbid i say "damn" on the citizens band!
FCC should make it so everybody has to have a license to use CB's.
73's!
Mike

I have a better idea, get your license and you can modify your radio to your hearts content legally. for the same price and you get more power. Plus you meet nicer people.

You might be surprised what I would say in person and I am far from the first to make the observation about MS.

Anyone doing scavenger work in mergers and acquisitions knows full well that the survivors of International Buggywhip are not the most sensible and ambitious group in the world. The fellow who built White Consolidated Industries (out of White Sewing Machine) used to have this great morning meeting where he would sit next to the grand poobah of the company he just bought out and with a big smile on his face put out his cigar in the poobah's coffee. Set the tone for what was to follow for damned sure.

A fairly brash soul of my acquaintance specialized in buying failed life insurance companies and was regularly called a vulture. He took umbrage and corrected it to 'turkey buzzard'. Asked what the difference was, he would note that buzzards wait til you are dead.

Having disposed of Mississippi, would you care to start on North Dakota?? Maine beckons. And there is always New Jersey.

I will be pleased to argue Economic Determinism with you and certainly would note that economic geography has a far larger impact on a state than its governmental or legal structure. The five little old ladies in Sacramento that actually run California have tried to kill the state since their grandmothers held the jobs but haven't succeeded yet, right Jay?

Substance does indeed trump appearances and political correctitude, Randrew. Get used to it.

Apples and Oranges,

With the 1/4 wave whip mounted right behind the van body, you were
effectively shielding
1/3 or more of the antenna with the truck. The antenna was coupling to the
van raising the
SWR and reducing performance. Move the steel whip out into the clear, it
would be different. When you put that top-loaded Firestick on, the RF
portion of the antenna was above the van. For kicks, take the stick and
mount it down so that the loading coil is behind the van body, and I betcha
you'll get about the same results. I see people mount
K40s right on the bumper behind a van, and I wonder how they even hear
anything, much
less transmit. Maybe they only talk to the truck/car that is tailgating
them?

The abbreviations and prosigns you mention have been in use for more
than 80 years. But there's no law that says you have to use them.
Although it strikes me as a bit silly to say they are intended to keep
newcomers out. Sort of like going to a baseball game and complaining
that they play the national anthem and serve peanuts and use terms
like "ball" and "strike".

Being a resident of Nebraska hardly makes you qualified to judge other states, unless of course, someone is holding you hostage there. In that case, you may have a valid argument.

>
> > Dave
> > "Sandbagger"

I'll give it a shot in general terms. The truth is, local gov'ts CAN pass
enabling statutes that
permit local law to enforce regulations that already exist on the Federal
level. They can't go beyond Federal law (such as banning CB entirely, or
saying you cannot run but 1 watt,
for example), but they can pass ordinances that deal with neighbors'
complaints of interfer-
ence from splattering CB radios, or the use of amplifiers, and even profane
language while
using such devices. This ability was permitted by HR 2346 that was sent
thru Congress in
October of 2000 and signed into law by Clinton--I don't know the PL number.
Local gov'ts are just now beginning to get wind of this and pass enabling

ordinances. And I don't
know just how far the various locals will take this. Many of them may turn out much like the Muncie(?) IN incident. I don't know--there hasn't been enough of these (yet) to tell. It
does mean that these locals *might* smell "revenue" in fines and *can* even take the "offending" equipment. NOW: Here is one issue that made this thread so long--and that is
the one about Amateur ops being exempt from local enforcement. That part is true in that
the Federal enabling PL states that local gov'ts may not enforce Federal laws concerning any licensed service. That doesn't mean that if a ham were running 3,000 watts and cussing up a blue streak that they *can't* necessarily get him on an obscenity, public(?)
disorder, or disturbing the peace offense. BUT what they CAN'T get him for are equipment, frequency usage(operating AM in a CW subband-as if they were likely to know the difference), or violations of the rules governing the Amateur Service. Once the
ham produces a license, the cop is to refer the matter to FCC who, then, is supposed to
handle it--and I suppose they would with the complaint coming from LEOs. That issue seems to cause some friction amongst the readers, but that is the way I see it, and it is the
way the law reads. Again, yes, the locals could get the ham on OTHER than simple inter-
ference if he were creating a deliberate disturbance as stated above, but they can't just come in and shut him down, take his equipment based on suspicion that he is causing Mrs.
Sims' TV to go bonkers.

Basically, the thing was created to allow locals to regulate and enforce the operation of CB stations and only CB stations. BTW, I oppose it for reasons I have already explained

Tech stocks? You have been watching too much TV. If you want the long-term deal, buy up Coke, P&G, etc. But if you want to ride the next big wave, so to speak, start looking at luxury yachts. Offshore boats -- private and commercial, large and small. Don't forget all the complementary industries (especially epoxy), and diversify your stocks internationally. Pick wisely -- the game is research, research, and more research.

Certainly we're ALL able to see a multiple number of angles. The extremely crackpot angles don't bear serious consideration and most people discard them. Except for you, Twist. You've got an especially wacked out POV on things.

I had a Bearcat 560xlt with this exact problem. This scanner had a design
flaw.
The power jack had no support on the circuit board. After some flexing of
the
power cord would break the joint. I tryed to resolder it a few times but
gave up and tossed it out for something better.

I am not sure I would care to depend on either one. HP is a gamble on making a merger work which is never a good bet and in this case does not offer a lot of upside payoff. GE is a good company but I don't think all the sewer gas is out of GE Capital quite yet. Buy GE when the indictments come down.

It's due to the idiots that make that band a cesspool. It's a faily
useless service and has been for a LONG time now. It's pretty much
un-usable due to the idiots.

It is evident by your choice of descriptive adjectives, to what degree
your prejudice festers.
A ham license is something you have to expend some effort obtaining, so
it does hold some intrinsic value, despite what your bias is telling
you.

"Work" is a relative term. It is still an accurate description of what
you have to do to obtain the license. It might be easy work, or hard
work depending on the person. But it is still work, which is still more
than you have to do to operate a CB, which is buy on at your local
"Radios R Us"

That may be true, but it doesn't explain why a person that has the
knowlege to gain a ham license, would not do so, just to say "I did it"
if for no other reason.

Since the CB license was abolished by the FCC some 20 years ago, I can
say with some certainty that the CBer has no license.

Like it or not, hams have something that you don't. The fact that you
react so predictably negative fits the classic mold of someone who
cannot achieve so they downplay the significance of that achievement.

What is "harmless interference" anyway? If someone is being interfered
with, in their eyes, it's harmful. "Harmless interference" is an
oxymoron.

The fact that you, a non-ham, spends so much time and effort documenting
"bad hams" just illustrates further your inner desire to justify your
failure to obtain a ham license

You seem to have it backwards. If the ham bands are a cesspool, then 11 meters is the state landfill. You have no place talking about the actions of a statistically small percentage of scofflaw hams, when 11 meters is rampant with radio anarchists, who need the attention of some law enforcement agency. HR2346 was written specifically with CBers in mind.

You keep trying to stretch this into extreme cases. If a ham has truly gone "twistie", and is running wild on some ham band and creating a public nuisance, he may be cited for the public nuisance by the locals, but only the FCC can cite him for radio rule infractions.

CBers can have their whole station confiscated if it it deemed to be "contraband", by the locals, and that is the big difference. A difference that you can't seem to grasp.

It's the FCC's job to handle CBers as well. They just haven't been doing
a good job of it.
